Welcome

Welcome to the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide (lab guide). The lab guide is part of the IBM watsonx Assistant for Z for Technical Sales Level 4 learning plan for IBM and Business Partner Technical Sales and related badge. The learning plan is intended to teach technical sellers and Business Partners how to conduct a proof of experience (PoX) for a client.

In a fast-paced world, things change

The products and services may appear differently than what is shown in the lab guide. This can occur if the product or service is updated with a new version.

Responses generated by IBM watsonx Assistant for Z are likely to change over time. The responses you see when you run the queries in this section may differ from the screen images captured in the lab guide.

This lab guide covers the setup, configuration, and usage of watsonx Assistant for Z. This lab guide uses the [IBM watsonx Assistant for Z Velocity collection](#) and the three Velocity Pilot lab environments in IBM Technology Zone (ITZ).

The lab guide also enables dedicated lab environments for customized client PoXs and demonstrations. If you are preparing for an actual pilot engagement, refer to the [Pilot Scoping Guide for watsonx Assistant for Z](#) for additional information.

The lab guide provides the following guidance to:

- Provisioning the lab environments
- Creating an assistant and configuring conversational search
- Configuring assistant settings
- Testing conversational search
- Deploying a dedicated instance of OpenSearch for client document ingestion (Optional)
- Importing skills for z/OS automations
- Connecting apps to assistants
- Creating assistant actions
- Creating skill flows
- Creating custom-built actions
- Importing pre-packaged z/OS skills
- Publishing and deploying your assistant

Support

Think something is down? Check the applicable status pages for any known issues such as a site or service not being available:

- [IBM Technology Zone status](#)

For issues with provisioning the ITZ environment for this lab (for example, a failed reservation request due to insufficient quota capacity), open a ticket with ITZ support:

- Web: [IBM Technology Zone ticket system](#)
- Email: techzone.help@ibm.com

For issues related to specific steps found in the demonstration guide after the ITZ environment is provisioned, contact the authors:

- Slack:
 - [#watsonx-assistant-z-technical](#) - IBM only
 - [#wxo-practitioners](#) - IBM only - for questions that are related to the software as a service (SaaS) instance of watsonx Orchestrate
- Email: andrewj@us.ibm.com and maxwell.g.weiss@ibm.com

Business Partners, use the IBM Training live Chat Support service or other support methods that are found on the IBM Training portal [here](#).

Using the demonstration guide

Use these helpful tips to take full advantage of the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide.

Printing the demonstration guide

⚠ Printed or saved copies can be out of date

The IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide changes regularly to match the IBM watsonx Assistant for Z offering and associated ITZ environment. Printed or saved copies of the demonstration guide can become out-of-date quickly and result in failed steps.

A ready-to-print PDF version of the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide is [here](#).

Viewing images

Images in the demonstration guide can be enlarged by clicking on the image. Press the **Esc** key or click the **X** to dismiss the enlarged image.

Reserve the IBM Technology Zone environment

Search

IBM watsonx Assistant for Z for
Technical Sales Level 4 Lab
Guide

Welcome

Reserve the IBM Technology
Zone environment

Pilot setup

Next steps

2. Click Reserve now.

The **Reserve now** option creates a reservation for immediate use. Optionally, schedule the reservation for a later date, like when you will be at your client's office.

3. Complete the reservation request and click Submit.

The first two reservations will be similar to the first image below and have fields a-e that will need to be completed.

a. Optionally, change the **Name** field for the reservation.

b. Select the **Education** purpose tile.

c. Enter a **Purpose description**.

d. Select the region nearest your physical location in the **Preferred Geography** drop-down.

e. The **End date and time** will be set to 2 days after the current date and time.

f. Accept the IBM Technology Zone's terms and conditions and security policies.

g. When satisfied with the parameters, click **Submit**.

Image highlighting

In some images, the following styles of highlighting are used:

- **Solid highlight box:** This style of box highlights where to click, enter, or select an item.

- **Dash highlight box:** This style of box highlights one of two things: the path to follow to get to a specific location in the user interface, or areas to explore on your own.

Copying commands and prompts

Copying and pasting commands and prompts from this demonstration guide is easy and can eliminate typographical errors.

Click the highlighted copy icon and then use your operating system's paste function. For example, $\text{^ Ctrl } + \text{ V }$ or right-click and select Paste.

Prompt 1

What is the APF list in z/OS? Provide a detailed explanation.

Acronyms and terminology

IBM employees and the tech industry in general, tend to use acronyms. In the demonstration guide, most acronyms will appear with a dashed underline. Hover over the acronym to learn its meaning. A question mark (?) icon will first appear and after a second the tool tip with the acronym's meaning is displayed. Try it here: LPAR.

Specific guidance for IBM watsonx Assistant for Z and the ITZ environment

Following the scripts provided in the IBM watsonx Assistant for Z for Technical Sales Level 3 Demonstration Guide will help guarantee a successful demonstration. Use these tips to help insure success with IBM watsonx Assistant for Z and the ITZ environment:

- Follow the scripts in the IBM watsonx Assistant for Z for Technical Sales Level 3 Demonstration Guide for the automations and skills to execute as expected.

Table of contents

General demonstration guidance

Specific guidance for IBM watsonx Assistant for Z and the ITZ environment

The Lab Guide table of contents

This **Demonstration Guide** uses a responsive browser-based interface to ensure pages are usable on various devices with different screen sizes. The Demonstration Guide table of contents may be displayed as highlighted in the green dashed box in this image:

The screenshot shows a browser window for the "IBM watsonx Assistant for Z for Technical Sales Level 3 Demonstration Guide". The title bar includes the course name and a search bar. On the left, a green dashed box highlights the "Table of Contents" sidebar, which lists various sections like Welcome, Guidance for delivering a demonstration, Reserve the IBM Technology Zone environment, etc. The main content area displays the "Welcome" page, which introduces the course goal of providing knowledge and tools for demonstrating IBM watsonx Assistant for Z.

However, if the browser window is sized smaller, the table of contents can be accessed by clicking the main menu icon (≡):

The screenshot shows the same browser window after the main menu icon (≡) was clicked, causing the sidebar to collapse. The main content area now displays the "Welcome" page, which reiterates the course goal of providing knowledge and tools for demonstrating IBM watsonx Assistant for Z.

Click the main menu icon (≡) to expand the table of contents.

Continue to the [Reserve the IBM Technology Zone environments](#) section to begin the journey to obtain the IBM watsonx Assistant for Z Technical Sales Advanced badge.

IBM Technology Zone environment

To enable sellers to learn how to deliver client pilots of IBM Watsonx Assistant for Z, three environments are available in IBM Technology Zone (ITZ). The environments are part of the Watsonx Assistant for Z Velocity lab collection and can be found in the [IBM Watsonx Assistant for Z](#) collection.

- **Watsonx Assistant for Z lab – Watsonx Orchestrate:** a dedicated environment with Watsonx Orchestrate on IBM Cloud that is used for creating and configuring the assistant, configuring conversational search, importing skills, and configuring actions.
- **Ansible Automation Platform (AAP) & z/OS:** a pre-configured instance of AAP and Wazi z/OS. The environment includes preinstalled Ansible playbooks that can be imported as skills within Watsonx Orchestrate and connected to your assistant. The environment provides preinstalled templates for various use cases that are covered in a later section. Learn more about AAP [here](#). Learn more about Wazi, [here](#).
- **Single Node OpenShift with NFS storage:** used to provision a single-node Red Hat OpenShift cluster (SNO) on IBM Cloud. The cluster is used to install a dedicated instance of [OpenSearch](#) for Watsonx Assistant for Z. This environment enables ingestion of client-supplied documents.

All activities in this lab guide are required.

While all three environments may not be required for every client pilot, to complete the Level 4 learning plan and earn the IBM Watsonx Assistant for Z Technical Sales Advanced badge, you must provision all three ITZ environments and complete all sections in the lab guide. **Any statements in the ITZ collection regarding optional environments or tasks should be ignored.**

Follow the instructions to create new reservation requests, extend the reservations, and access the ITZ demonstration environments. Provisioning the SNO environment in ITZ can take several hours, while the other two environments typically provisioning in under 30 minutes.

Create a reservation request

1. Click each of the links that follow to open a browser to the reservation pages of the **IBM Watsonx Assistant for Z** ITZ environments.

You may be asked to authenticate to IBM Technology Zone.

The steps to authenticate to ITZ are not detailed here as they may vary between users.

[Watsonx Assistant for Z lab – Watsonx Orchestrate - reservation page](#)

[Ansible Automation Platform \(AAP\) & z/OS - reservation page](#)

Single Node OpenShift with NFS storage - reservation page

 The next two steps are for one of the three environments. Repeat for all three environments.

Be sure to follow these steps to create a reservation in ITZ for all three environments.

2. Select Reserve now.

The **Reserve now** option creates a reservation for immediate use. Optionally, schedule the reservation for a later date, for example, when you are at your client's office to start a pilot.

The screenshot shows the 'Create a reservation' interface. At the top, there are tabs for 'Select a environment/infrastructure', 'Select a reservation type', 'Fill out your reservation', and 'Complete'. Below these tabs, there is a section titled 'Single environment reservation options:' with two radio buttons: 'Reserve now' (which is selected and highlighted with a green box) and 'Schedule for later'.

3. Complete the reservation request form and then click Submit.

The first two reservations are similar to the first image and have fields **a-e** that need to be completed.

- a.** Name: specify a name for the reservation (optional).
- b.** Purpose: select the **Education** purpose tile.

For client pilots...

For client pilots, set the **Purpose** field in the reservation to **Pilot** and provide an opportunity number to receive a longer reservation.

- c.** Purpose description: enter a description, for example: Level 4 education.
- d.** Preferred geography: select the region nearest to your physical location for improved performance and reduced network latency.
- e.** End date and time: the initial maximum will be set to two days after the current date and time. Instructions follow to extend the reservation end date.
- f.** Accept the IBM Technology Zone's terms and conditions and security policies.
- g.** Click **Submit**.

n Submit

During the provisioning process, multiple emails are sent to you from ITZ as the provisioning process runs. One email states the reservation is provisioning and the other email states that the environment is **Ready**.

In rare cases, the provisioning process may fail. If you receive an email stating the reservation failed, try again by repeating Steps 1-3 for the environment that failed to provision. In addition, review the [Troubleshooting](#) section that follows. If issues continue, open an [ITZ support ticket](#) by using the methods that are mentioned in the [Support](#) section.

Extend the reservation

When the reservations are in the **Ready** state, you can extend each reservation beyond its original end date. The duration of the extension will vary by reservation.

1. In the IBM Technology Zone portal, expand **My TechZone** and select **My Reservations**.

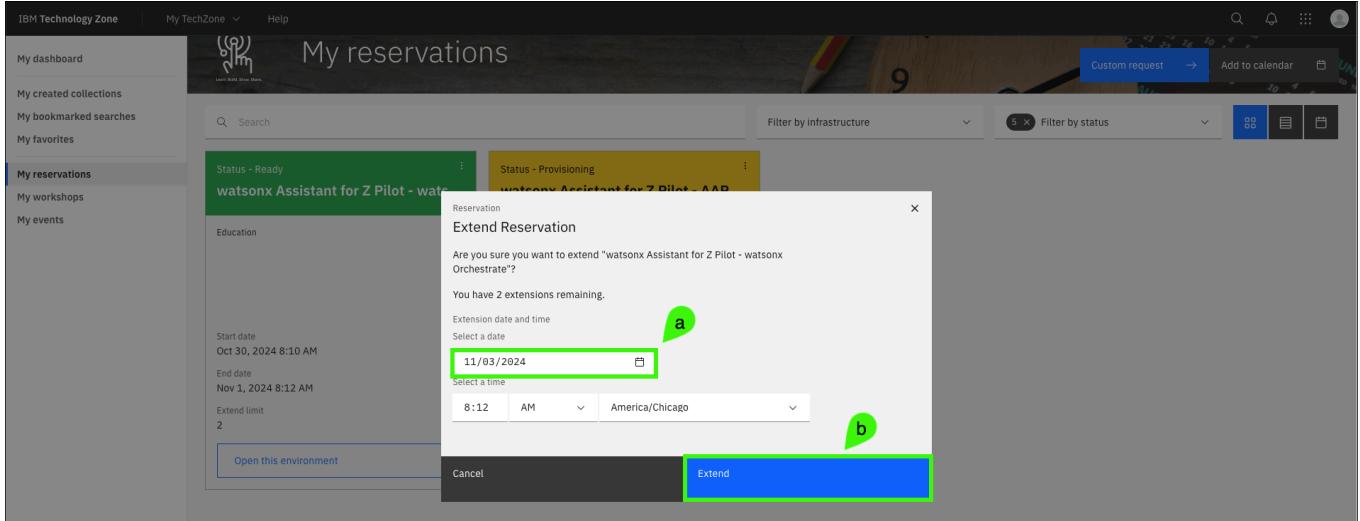

The screenshot shows the IBM Technology Zone portal interface. The top navigation bar includes 'IBM Technology Zone', 'My TechZone ▾', 'Help', and a search bar. The left sidebar has links for 'My dashboard', 'My created collections', 'My bookmarked searches', 'My favorites', 'My reservations' (which is selected and highlighted in green), 'My workshops', and 'My events'. The main content area displays a welcome message 'Welcome to Technology Zone, Andrew' and a section titled 'Certified Base Images' with the subtext 'Best starting point to build'. Below this is a diagram of a network or system architecture. The 'My reservations' section lists two items:

- watsonx Assistant**: Status - Ready. This item is highlighted with a green dashed box. Its details include:
 - Education
 - Start date: Oct 30, 2024 8:10 AM
 - End date: Nov 1, 2024 8:12 AM
 - Extend limit: 2
 - Buttons: 'Open this environment' and a three-dot overflow menu icon.
- watsonx Assistant for Z Pilot - AAP ...**: Status - Provisioning. This item is highlighted with a yellow dashed box. Its details include:
 - Education
 - Start date: Oct 30, 2024 8:12 AM
 - End date: Nov 1, 2024 8:10 AM
 - Extend limit: N/A
 - Buttons: 'Open this environment' and a three-dot overflow menu icon.

2. Click the **overflow icon (≡)** on the reservation tile and select **Extend**.

This screenshot shows the 'My reservations' page in the IBM Technology Zone portal. The left sidebar is identical to the previous screenshot. The main area shows the two reservations. For the first reservation, 'watsonx Assistant', the three-dot overflow menu icon is highlighted with a green dashed box, and the 'Extend' option is also highlighted with a green dashed box. The second reservation's menu is not highlighted. Both reservations have their respective 'Open this environment' buttons at the bottom.

3. Click the **Select a date** option, (a) specify the date to extend to, and then (b) click **Extend**.

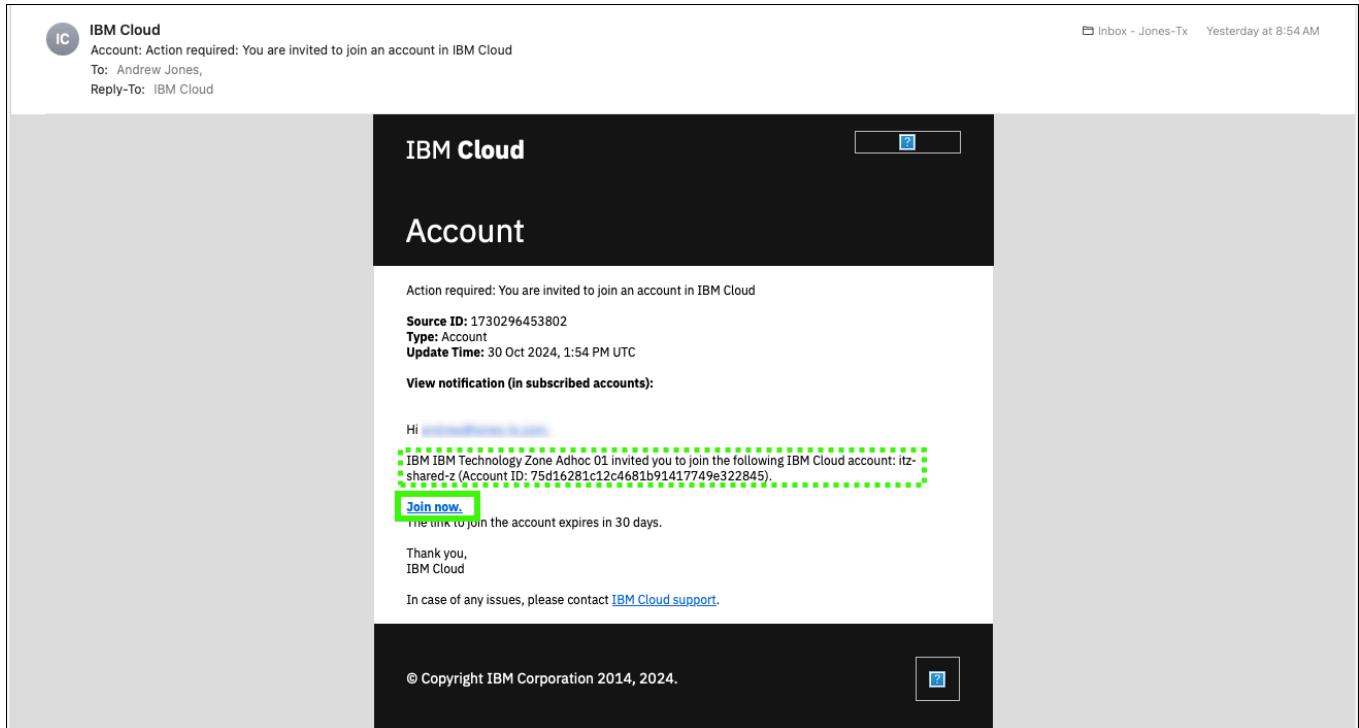

If you anticipate needing more time, repeat Steps 5-6 to extend the reservation to the maximum allowed. Repeat these steps for the other two reservations.

Join the ITZ IBM Cloud account

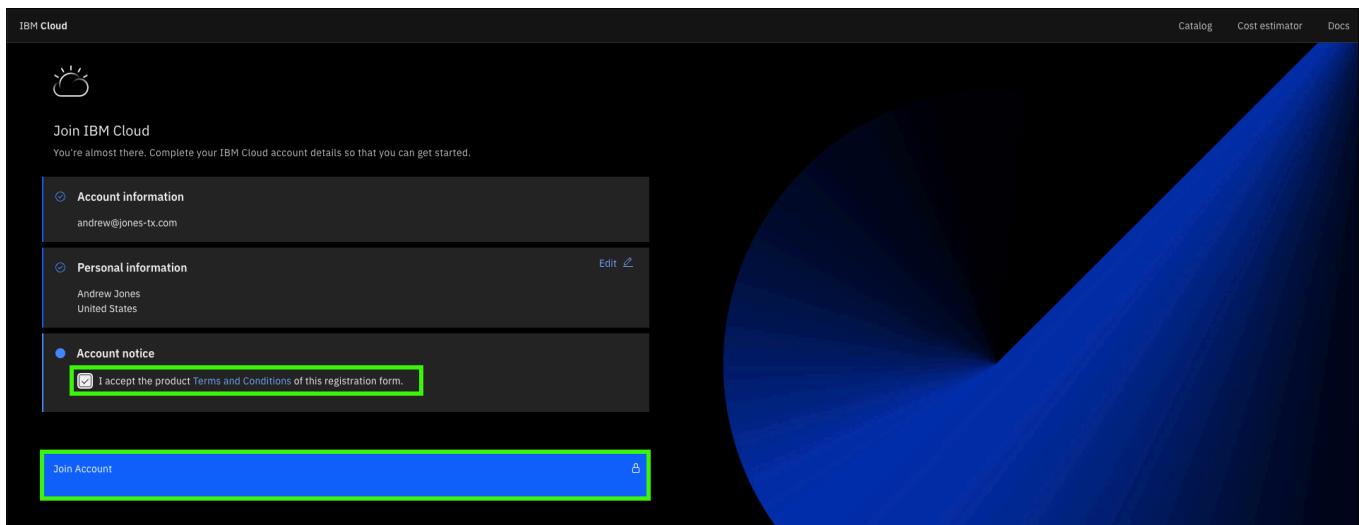

Both the **watsonx Assistant for Z lab – watsonx Orchestrate** and the **Ansible Automation Platform (AAP) & z/OS** environments add you to an IBM Cloud account while your reservation is active. During the provisioning process of these **ITZ** environments, you receive two emails from IBM Cloud.

You only need to accept the invitation to the **watsonx Assistant for Z lab – watsonx Orchestrate** environment.

1. Open the email from **IBM Cloud** and click the **Join now** links.

2. In the **Join IBM Cloud** browser window that opens, select the **I accept the product Terms and Conditions** of the registration form, and then click **Join Account**.

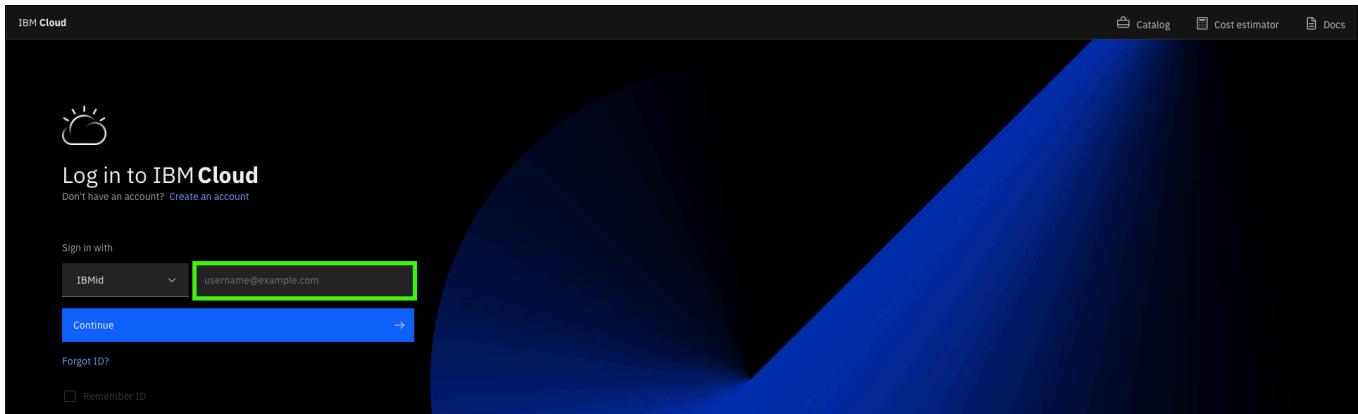

After joining the account, verify that the account appears in your available account list in the IBM Cloud portal.

- Click the following link to open a browser to the IBM Cloud portal.

IBM Cloud portal

- Follow the directions to complete the authentication to IBM Cloud using the same email address you used to login to ITZ. The login steps vary depending on any two-factor authentication methods enabled.

- Click the **account** menu and verify access to the IBM Cloud account listed in your ITZ reservation.

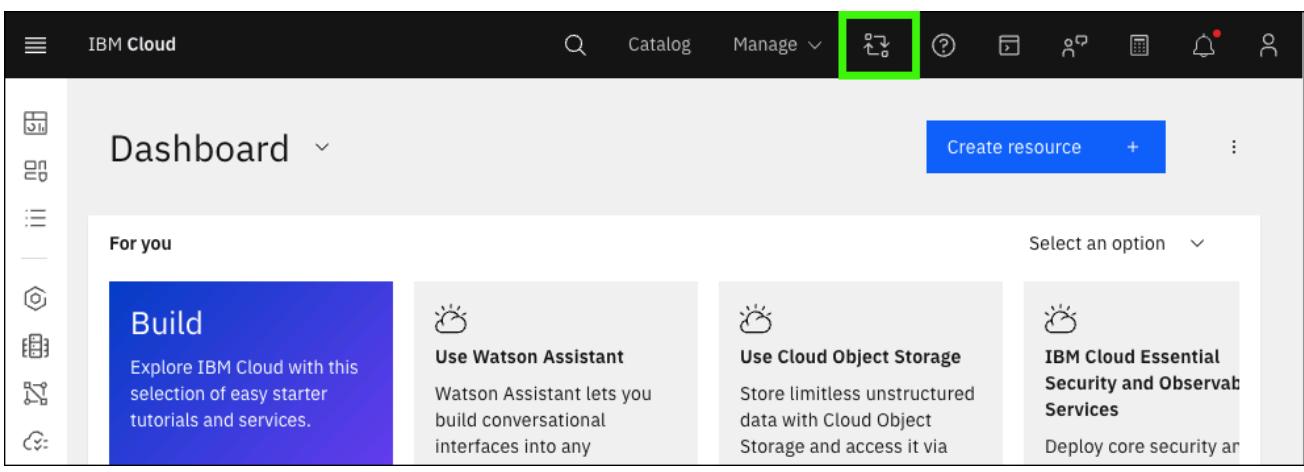

The account may change within ITZ.

Over time, the account may change for the environments. The account names should align with the account named in the invitation email you received.

 Does your IBM Cloud portal view look different?

If your IBM Cloud portal looks different from the images above, it could be because the IBM Cloud portal has gone through a design change, or your browser window is set to smaller size. Instead of the current selected account appearing in the top menu, you may see this **change account** icon:  Click this icon to view the list of accounts you can access.

Accessing the environments

Each reservation provides access to its respective environment. Details for accessing each environment are provided in the **Pilot setup** sections that follow in the lab guide.

After all three reservations are in the **Ready** state and you accept the invitations to the IBM Cloud accounts, proceed to the next section to complete the pilot setup.

Troubleshooting

 If your reservation for the Single Node OpenShift environment fails...

If your reservation for the Single Node OpenShift environment fails, try selecting one of the **eu-gb region** options as the **Preferred Geography**.

Pilot setup

Creating an assistant and configuring conversational search

You use [watsonx Orchestrate](#) to create the assistant and configure conversational search. You can configure your assistant to use conversational search by using a hosted [OpenSearch](#) instance. The pre-configured instance in IBM Technology Zone (ITZ) has over 220 knowledge sources and supports Retrieval Augmented Generation (RAG). The large language model (LLM) providing the conversational AI augments this knowledge based on IBM Z documentation. All of these elements create IBM Z context-aware responses to queries with its content-grounded knowledge.

Below is a high-level, logical architecture of the environment you will deploy in this section.

Access the [ITZ IBM Cloud account](#) for the Watsonx Assistant for Z Pilot environment

8. Preview your assistant and then click **Create**.

The assistant is now created.

Configure conversational search

In the next steps you will be to configure **conversational search** for your assistant that uses a hosted instance of OpenSearch.

1. Click **Generative AI** menu item (💡) in the left navigation.

2. Review the base large language model (LLM) settings.

Notice the other LLM models available. For most pilots, the **granite-3-8b-instruct** model is appropriate.

3. Click Set up your Search Integration.

By default, conversational search is not enabled when an assistant is created. Conversational search takes priority over general-purpose answering if both are enabled. Learn more about conversational search in watsonx [here](#).

4. Click Custom service.

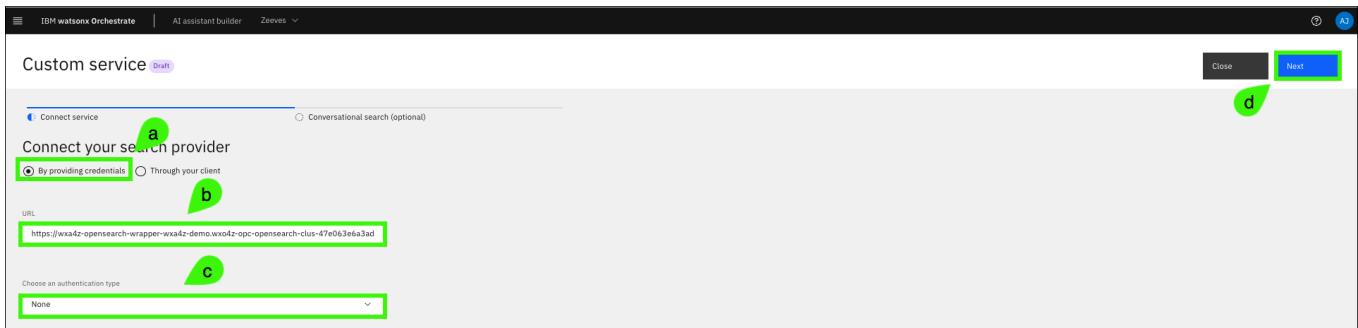

5. Complete the **Custom service (a-c)** form and then click **Next (d)**.

a. Select **By providing credentials**.

b. Enter the following value in the **URL** field (use the copy icon to avoid typographical errors). This is the **URL** for the a shared **OpenSearch** instance. In later sections you will created and customize a dedicated instance.

```
https://wxa4z-opensearch-wrapper-wxa4z-demo.wxo4z-opc-opensearch-clus-47e063e6a3ad1f71bf2e58f91c3b4c2e-0000.us-south.containers.appdomain.cloud/v1/query
```

c. Select **None** in the **Choose an authentication type** drop-down list.

6. Enable conversational search and then click Save.

7. Update the conversational search **custom service** settings based on your requirements.

Note: The **Settings** page is divided into two sections in the following images to enhance the visibility of the screen captures.

Learn more about these **custom service** settings [here](#).

The following settings are proven to work well. You can experiment with these settings to see how they affect queries for your client's pilot.

a. Enable **Conversational search**.

b. Select **Single turn**. Enabling **multi-turn conversation** (by selecting Entire conversation) is not yet supported for the solution on-premises. Be mindful in using this option and help ensure that the client understands what is supported in the solution.

c. Specify the text that appears to instruct the user to expand the list of citations in the assistant (except web chat client).

d. Select **Lowest** for the **retrieval confidence threshold** setting. This setting checks the confidence of the retrieved citations before a response is generated.

e. Select **Verbose** for the **generated response length**. This setting affects the average response length. Depending on user input, variations from the selected length can occur.

f. Select **Lowest** for the **response confidence threshold**. This setting checks the confidence of the generated citations after the response is generated.

Conversational search

Use a Watsonx generative AI model hosted in Dallas, TX US, to generate conversational responses. [Learn more](#)

a **On**

b **Single turn**
The assistant uses only the current user input for retrieving search results and generating answers. This works well for clear, complete inputs but generally won't work with context-dependent questions such as, "Why is that?" after a previous answer.

c **Entire conversation**
The assistant uses the entire session history for retrieving search results and generating answers. This handles context-dependent questions well but may over-rely on past topics, even if the user has moved on.

Define the text for the citations title:

Search configuration

To test this, go to [evaluations page](#) [Restore default](#)

d **Lowest**

Retrieval confidence threshold: Low High Highest

Generated response length: Concise **e** **Moderate** **f** **Verbose**

Response confidence threshold: **g** **Lowest** Low High Highest

g. Keep the default setting of **All** for the listing of citations.

h. Keep the **Default filter** field empty.

i. The **Metadata** field provides a way to adjust your assistant's behavior during conversational search for your OpenSearch instance. This option is explored in detail in the [Installing and using zassist to ingest client documents](#). Leave the field empty for now.

j. The **Search display text** options specify the default text displayed when no results are found or when connectivity issues to the backend search service occur. You can keep the defaults or customize the service.

Response confidence threshold: **Lowest** Low High Highest

Citations:
Citations will be displayed to the end user. This doesn't impact the number of citations used in the response.
 g **All**

Default filter:
Can be anything (plain text, JSON, etc)

Metadata:
JSON example:
{
 "example_field": "example_value",
 "other_example_field": ?
}

Search display text:

With actions, you can help your customers accomplish their goals.

Create action +

3. Click **No matches**.

The screenshot shows the 'Actions' list in the IBM Watsonx Orchestrate interface. The left sidebar has a tree view with 'Actions' expanded, showing 'All items', 'Created by you', 'Set by assistant', 'Variables', 'Trigger word detected', and 'Saved responses'. Under 'Set by assistant', 'No matches' is selected and highlighted with a green box. The main table lists actions with columns: Name, Last edited, Examples Count, and Status. The 'No matches' action was last edited 3 hours ago, has 0 examples, and is in a green status.

4. Click Step 1 under Conversation steps.

The screenshot shows the 'Conversation steps' section in the AI assistant builder. Step 1 is selected and highlighted with a green box. Step 1 contains the message 'I'm afraid I don't understand. Please rephrase your question.' and an 'Action complete' button. Step 2 is listed below it. The right side of the screen shows the 'Action starts' and 'Additional training examples (optional)' sections.

5. Select without conditions (a) in the Is taken drop-down menu and then click Clear conditions (b).

Note: the **Is taken** value does not change from **with conditions** after selecting **without conditions**.

The screenshot shows the configuration of Step 1. The 'Is taken' dropdown is set to 'with conditions' (highlighted with a green box). A confirmation dialog box titled 'Clear conditions?' is open, asking if the user wants to take the step without conditions. The 'Clear conditions' button in the dialog is highlighted with a red box. The 'Assistant says' field contains the message 'I'm afraid I don't understand...'. A green arrow points to the 'Is taken' dropdown, and a red arrow points to the 'Clear conditions' button.

6. Delete the default text in the Assistant says entry field.

The screenshot shows the configuration of Step 1. The 'Is taken' dropdown is now set to 'without conditions' (highlighted with a green box). The 'Assistant says' input field is empty, with the placeholder text 'or example: Please select from the following options:' visible. A green box highlights the empty 'Assistant says' field.

7. Expand the And then drop-down menu and select Search for the answer.

The screenshot shows the AI assistant builder interface with the 'Editor' tab selected. In the 'Conversation steps' section, step 1 is highlighted with a green dashed border. The 'Assistant says' section contains a text input field with placeholder text: 'For example: Please select from the following options:'. Below it is a dropdown menu labeled 'Define customer response'. The 'And then' section is expanded, showing a list of actions. The 'End the action' option is selected and highlighted with a green box. A sub-menu for 'Search for the answer' is open, listing 'Continue to next step', 'Re-ask previous step(s)', 'Go to a subaction', 'Use an extension', 'Search for the answer' (which is also highlighted with a green box), 'Connect to agent', and 'End the action'.

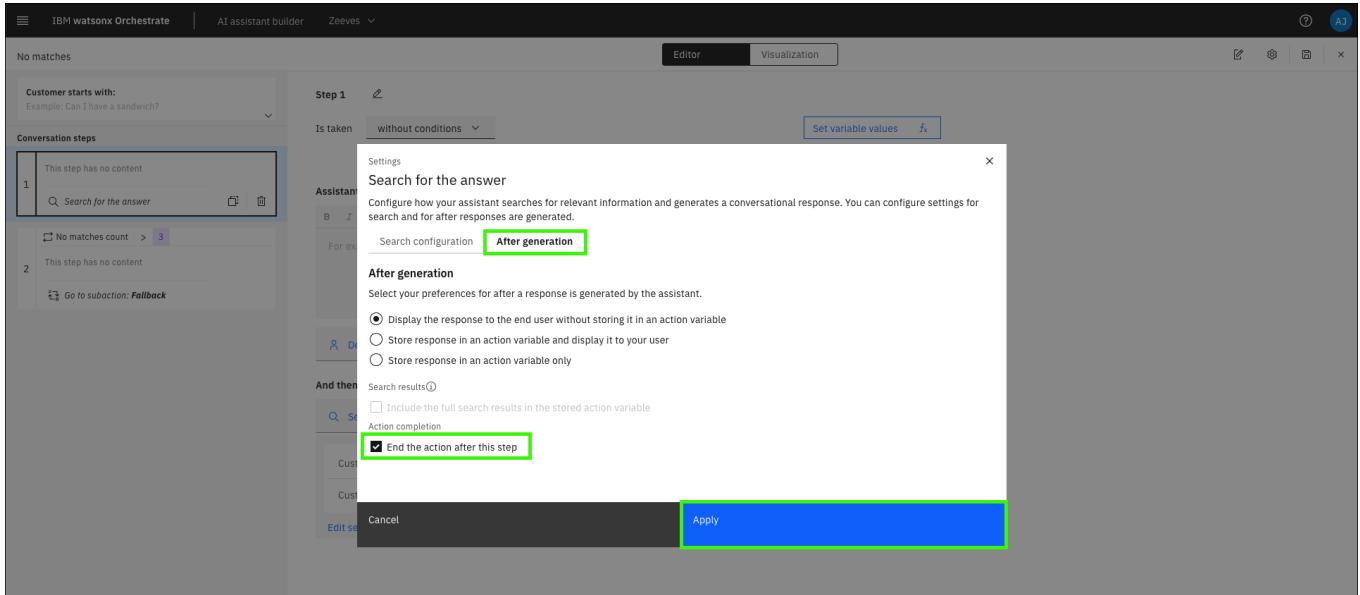

8. Click Edit settings.

This screenshot is similar to the previous one but shows the 'Edit settings' button in the 'And then' section's sub-menu for 'Search for the answer' highlighted with a green box.

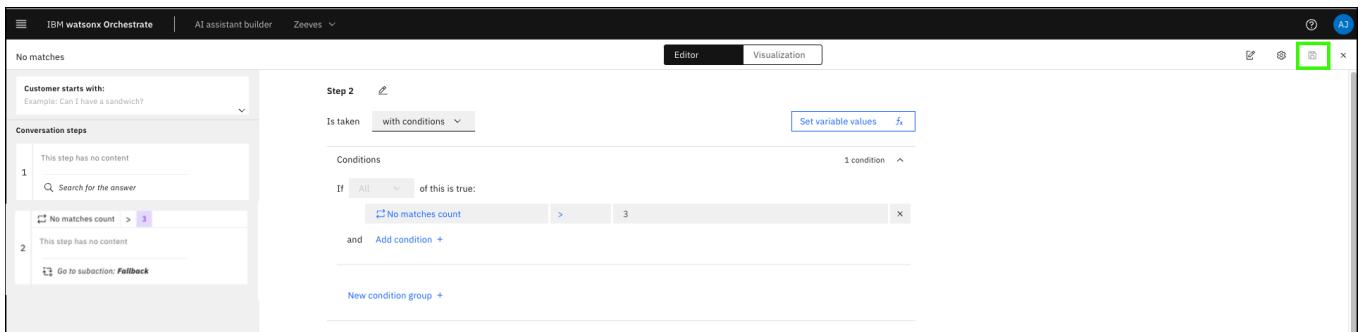

9. Click After generation.

A modal dialog box titled 'Search configuration' is displayed over the main interface. It has tabs for 'Search configuration' (which is selected) and 'After generation'. The 'Search configuration' tab contains fields for 'Custom search query (Optional)' and 'Custom results filter' (with 'Use default' selected). The 'After generation' tab contains a note about configuring settings for search and responses. At the bottom of the dialog are 'Cancel' and 'Apply' buttons, with 'Apply' being the active button.

10. Select End the action after this step and then click Apply.

11. Click Save (💾).

12. Select Step 2 (No matches count) under Conversation steps and click delete (🗑).

13. Click Delete in the confirmation dialog to delete Conversation step 2.

The screenshot shows the IBM Watsonx Orchestrator interface. In the center, there's a configuration panel for 'Step 2'. It includes a condition section: 'If All of this is true:' followed by a condition 'No matches count > 3'. Below this, there's a 'New condition group' button and an 'Add condition +' button. At the bottom of the configuration panel, there's a 'Delete' button highlighted with a red box. A confirmation dialog box is overlaid on the right side of the configuration panel, asking 'Are you sure you want to delete step 2? You will not be able to recover this data once deleted.' with a 'Delete' button also highlighted with a red box.

14. Click **Close** (the x icon) the **Editor** window.

This screenshot shows the same configuration panel for 'Step 1' as the previous one, but the confirmation dialog has been closed. The configuration panel now displays 'Is taken without conditions'. The 'Assistant says' section is visible below it. The 'Delete' button in the confirmation dialog is no longer highlighted.

15. Click **Fallback** in the **Actions** table.

This screenshot shows the 'Actions' table in the IBM Watsonx Orchestrator interface. The table lists several actions: 'Greet customer', 'Trigger word detected', 'No matches', and 'Fallback'. The 'Fallback' row is highlighted with a green box. The left sidebar shows categories like 'All items', 'Created by you', 'Set by assistant', 'Variables', 'Created by you', 'Set by assistant', 'Set by integration', and 'Saved responses'.

16. Delete all of the **Conversation steps**.

Note: The following image is edited. Only five steps are shown, but all six need to be deleted. You need to select each step individually. Click **delete** (trash bin icon) and confirm the deletion.

The screenshot shows the IBM Watsonx Assistant Editor window. On the left, under 'Customer starts with:', there is a single step: 'Call agent'. Below it, under 'Conversation steps', there are five steps, each with a green border around them. Step 1: 'Fallback reason is Failed to confirm topic.' Step 2: 'Fallback reason is Step validation failed.' Step 3: 'Fallback reason is Agent requested.' Step 4: 'Fallback reason is No matches.' Step 5: 'Fallback reason is Danger word detected.' To the right, the 'Step 1' configuration is shown. It includes a condition 'If All of this is true:' where 'Fallback reason is Failed to confirm topic return' and 'and Add condition +'. Below this, 'Assistant says' contains the message 'Sorry I couldn't confirm if you wanted to return to previous topic, let me connect to an agent.' Under 'And then', there is an action 'Connect to agent (action ends)' with conditions for 'If online' and 'If offline'.

17. Verify that all **Conversation steps** are deleted and then click the **x** to close the **Editor** window.

This screenshot shows the same Editor window after the conversation steps have been deleted. The 'Conversation steps' section on the left is now empty, indicated by a dashed green border. The configuration on the right remains the same, showing the 'Action starts' section and the 'Additional training examples for connecting to an agent' section.

18. Click the **Global settings** (⚙️).

This screenshot shows the 'Actions' page in the IBM Watsonx Assistant interface. The sidebar on the left has a 'Set by assistant' section highlighted with a green box. The main area displays a table of actions:

Name	Last edited	Examples Count	Status
Greet customer	4 days ago	1	Green
Trigger word detected	4 days ago	1	Green
No matches	4 days ago	1	Green
Fallback	4 days ago	1	Green

19. Click **No matches** under the **Conversation routing** tab.

Global settings

Did you mean:
Open a new savings account
Open a new checking account
I want to apply for a mortgage loan
None of the above

20. Move the slider to **More often** (or select **More often** in the drop-down).

The setting helps ensure that actions are triggered less often unless the user's query specifically matches the action's input.

Global settings

Conversation routing Change conversation topic Generative AI **New!** Autocorrection Display formats Algorithm Version Upload/Download

No matches

Unrecognized input by customers triggers the **No matches** action that can be configured to fetch answers from a [search integration](#) or trigger the **Fallback** action.

By setting this threshold, you can affect how often your assistant routes customers to the "No matches" action.

Use "No matches" More often

21. Click **Autocorrection**.

Global settings

Conversation routing Change conversation topic Generative AI **New!** **Autocorrection** Display formats Algorithm Version Upload/Download

No matches

Unrecognized input by customers triggers the **No matches** action that can be configured to fetch answers from a [search integration](#) or trigger the **Fallback** action.

By setting this threshold, you can affect how often your assistant routes customers to the "No matches" action.

Use "No matches" More often

22. Click the autocorrection toggle to turn the feature **Off**.

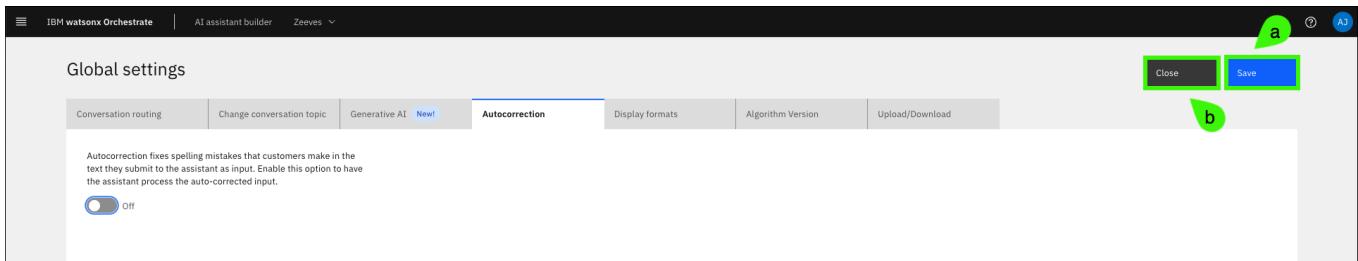

Global settings

Conversation routing Change conversation topic Generative AI **New!** **Autocorrection** Display formats Algorithm Version Upload/Download

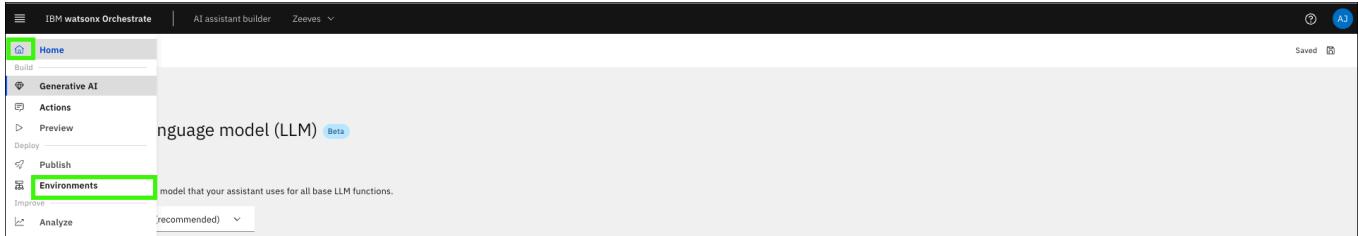

Autocorrection fixes spelling mistakes that customers make in the text they submit to the assistant as input. Enable this option to have the assistant process the auto-corrected input.

Off

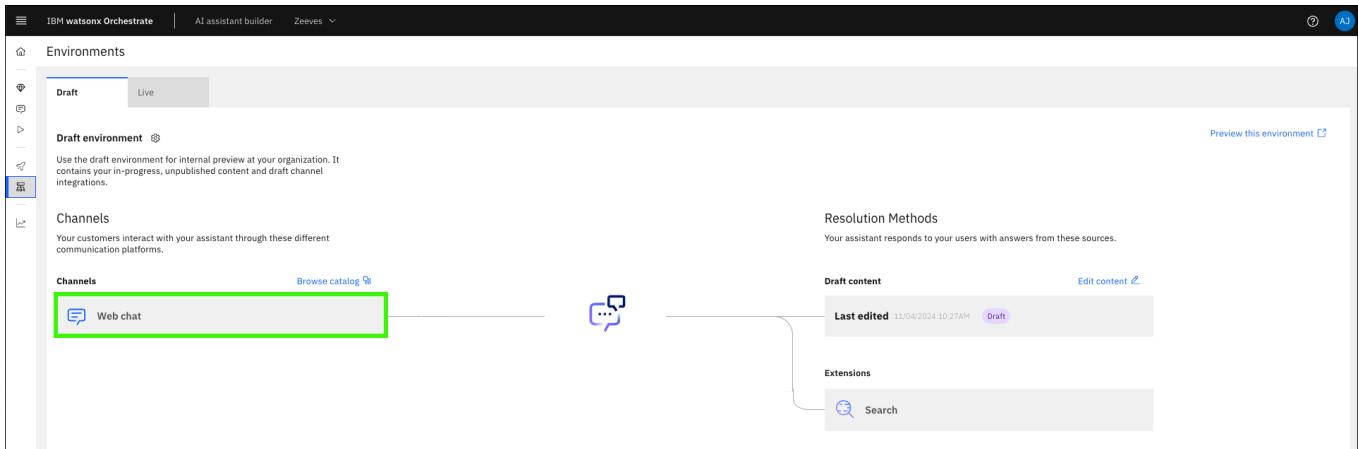

23. Click **Save** (a) and then **Close** (b).

24. Hover over the Home (🏠) and click Environments.

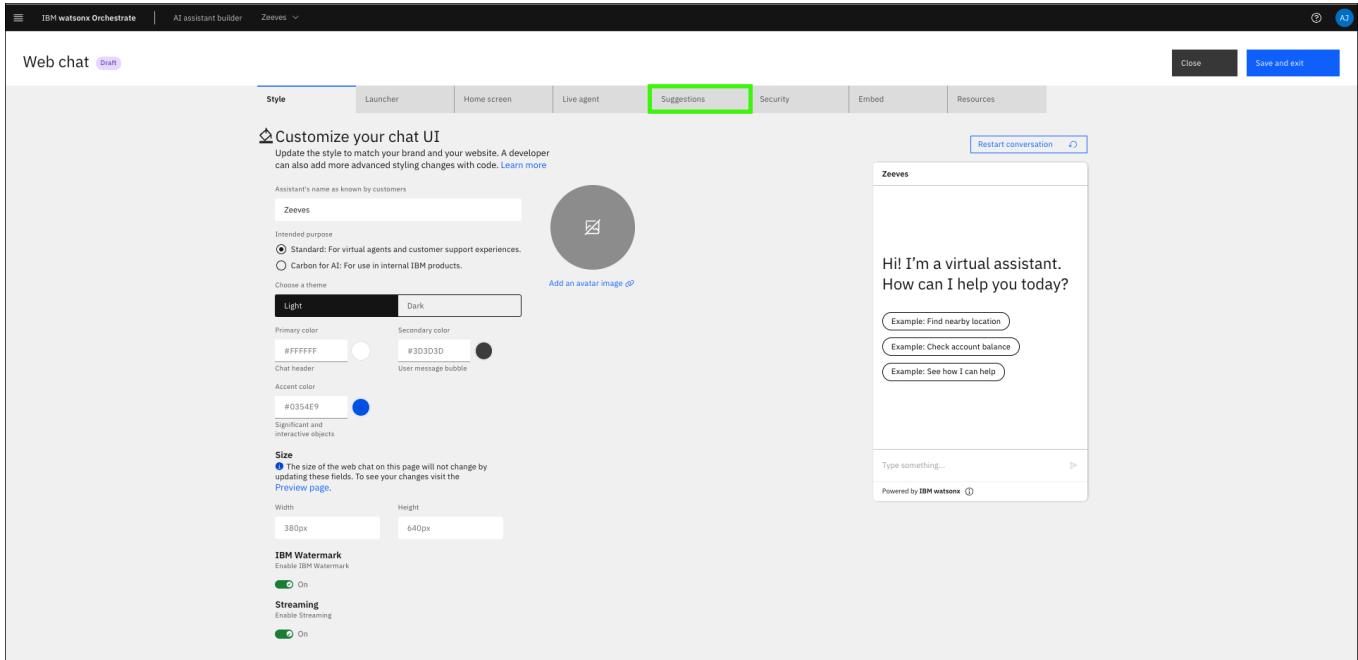

25. Click Web chat.

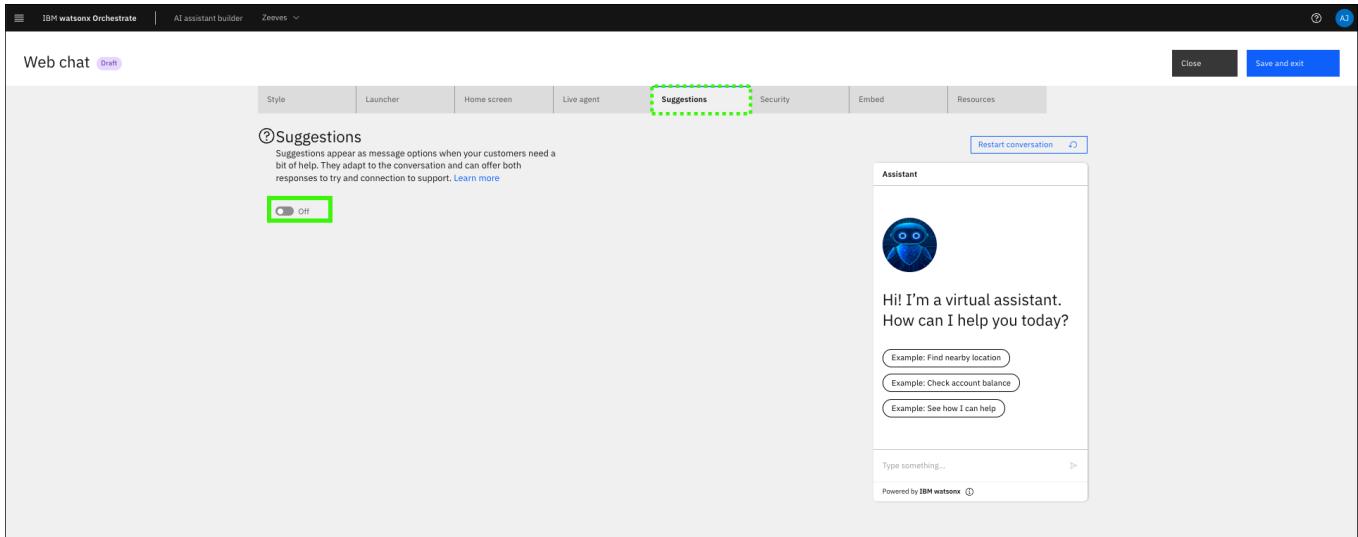

26. On the Style tab, click the Streaming toggle to enable streaming.

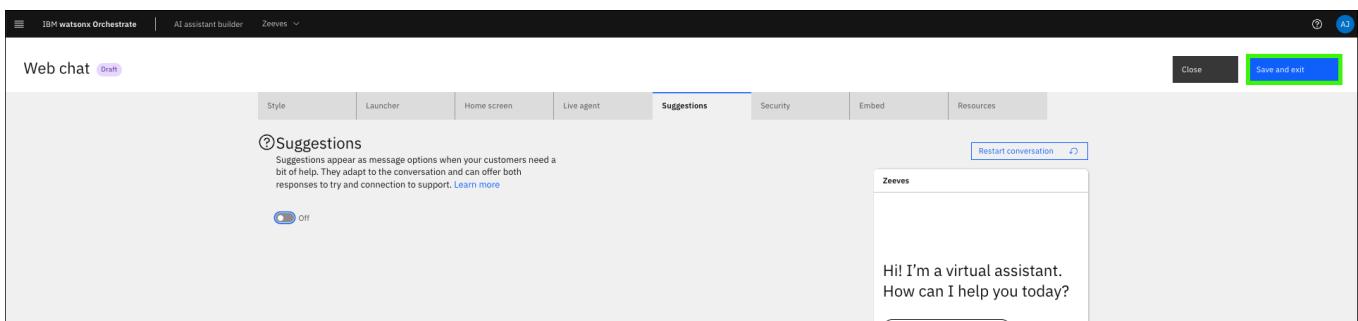

27. Click **Suggestions**.

28. Click the **Suggestions** toggle to turn this feature **Off**.

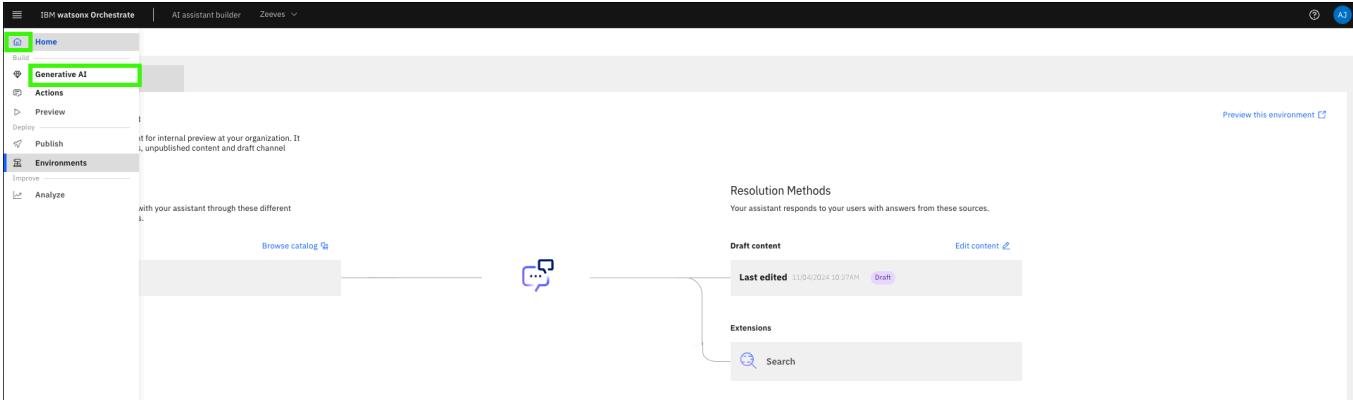

29. Click **Save and exit**.

Configure the base large language model

After the preceding steps are completed, there are enhancements you can make to configure how the large language model (LLM) responds to your queries including adding prompt instructions and configuring the LLM's answer behavior. These options can be summarized [here](#).

1. Hover over the Home () and click Generative AI.

2. Click Add instructions.

3. Enter a prompt instruction.

This option instructs the LLM in your assistant to give refined responses by adding prompt instructions. The instructions help the LLM guide the conversations by clarifying how to achieve the end-goal of an action.

Enter prompt instructions in the field. The maximum number of characters you can enter in the prompt instruction field is 1,000.

The following is an example prompt instruction that works well. Experiment with different prompt instructions.

You are a subject matter expert on mainframe systems. Please respond to all prompts with truth and accuracy. Keep all answers short and concise, unless requested to provide details.

Note: When the instructions are typed in, they are automatically saved and the LLM is immediately trained on them.

The screenshot shows the 'Generative AI' configuration page. In the 'Answer behavior' section, the 'General-purpose answering' toggle switch is turned on (green). Below it, the 'Conversational search' toggle switch is also turned on (green). A green box highlights the 'Conversational search' section. On the right, a preview window shows a greeting message: '10:47 AM Greet customer [default] Welcome, how can I assist you?'. The 'Save' button is visible at the top right.

4. Toggle **General-purpose answering** to **Off** and then click **Save** (💾).

The ability exists to configure the answering behavior of your assistant to provide responses that are based on the preinstalled content or general content.

On the **Generative AI** page (under **Prompt Instructions**), you see the **Answer behavior** section. After you configure **Conversational search**, you see that it is enabled (toggled on) with the search integration added.

If you enable both general-purpose answering as well as conversational search, the conversational search answering takes precedence over General-purpose answering.

Recommendation: For purposes of retrieving Z-specific answers and responses, it is recommended that you turn off general-purpose answering and leave only conversational search turned on.

The screenshot shows the 'Generative AI' configuration page. In the 'Answer behavior' section, the 'General-purpose answering' toggle switch is turned off (gray). Below it, the 'Conversational search' toggle switch is turned on (green). A green box highlights the 'Conversational search' section. On the right, a preview window shows a greeting message: '10:47 AM Greet customer [default] Welcome, how can I assist you?'. The 'Save' button is visible at the top right.

Testing conversational search

Now you can begin issuing queries to test the assistant's responses.

Important: Many of the settings configured earlier can be iteratively modified based on your assessment of the quality of responses. The settings can be reviewed and changed at any time. For example, adding extra prompt instructions, changing the verbosity of the responses, and modifying the indexes used for OpenSearch.

1. Hover over the **Home** () and click **Preview**.

2. Experiment with different prompts and validate that the answers are reasonable and related to IBM Z.

Other prompts and responses follow.

Note: The responses that you receive can vary from the ones shown.

Prompt:

What is z/OS continuous delivery?

Example output:

Prompt:

What is the APF list in z/OS? Provide a detailed explanation?

Example output:

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with icons for preview, AI assistant builder, and Zeeves. The main area has a title "Sample website". On the right, there's a chat window titled "Zeeves" with a message from "You" at 11:02 AM: "What is the APF list in z/OS? Provide a detailed explanation?". A large green dashed box highlights the response message, which is a detailed explanation about the APF list in z/OS.

Prompt:

Why is Db2 different than other database systems?

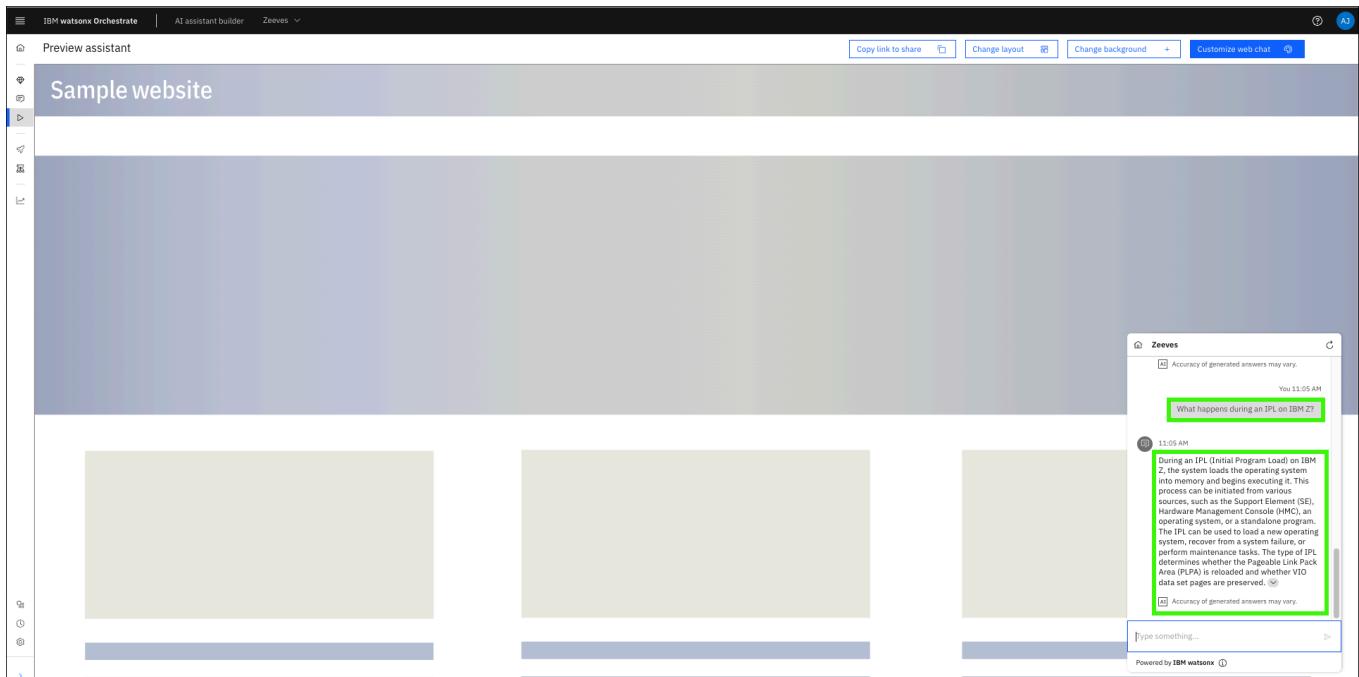

Example output:

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with icons for preview, AI assistant builder, and Zeeves. The main area has a title "Sample website". On the right, there's a chat window titled "Zeeves" with a message from "You" at 11:03 AM: "Why is Db2 different than other database systems?". A large green dashed box highlights the response message, which compares Db2 to other database systems, mentioning its mainframe origin and specific features.

Prompt:

What happens during an IPL on IBM Z?

Example output:

You now have a working assistant that uses IBM watsonx Assistant for Z. Take time to explore different prompt instructions and settings. If you encounter any issues, the Troubleshooting section that follows can help resolve them.

Continue to the [Creating a stand-alone OpenSearch instance for document ingestion](#) to learn how to configure a dedicated OpenSearch instance for ingesting client-specific documentation into the RAG model.

Troubleshooting

The following are issues that you may encounter. If the provided resolutions do not work, contact support by using the methods that are mentioned in the [Support](#) section.

✖ Assistant responds to all prompts with, "I might have information related to your query to share, but am unable to connect to my knowledge base at the moment" ✖

This Assistant is unable to connect to the custom service URL specified. This could be a network issue, the service may be down, the service may be restarting, or the service is no longer running at that URL.

Before reaching out to [Support](#), try the following:

- Wait a few minutes and try again. It may be the service was in the process of restarting.
- If you printed this demonstration guide or saved a copy, verify you are using the most current version of the [lab guide](#) and the correct service URL (<https://wxa4z-opensearch-wrapper-wxa4z-demo.wxo4z-opc-opensearch-clus-47e063e6a3ad1f71bf2e58f91c3b4c2e-0000.us-south.containers.appdomain.cloud/v1/query>). The URL may have changed since you saved or printed the lab guide.

Ingesting client documents

Creating a stand-alone OpenSearch instance for document ingestion

Next, learn to enable a client to ingest their own documentation into the Retrieval Augmented Generation (RAG) used by IBM watsonx Assistant for Z. The first step is to deploy a dedicated [OpenSearch](#) instance. The dedicated search instance is referred to as bring-your-own-search (BYOS).

Below is a high-level, logical architecture of the environment you will deploy in this section.

Earlier, you provisioned three IBM Technology Zone (ITZ) environments. One of which was a single-node Red Hat OpenShift (SNO) cluster. If you have not reserved this environment, or it is not in the **Ready** state, return to the [IBM Technology Zone environment](#) section to complete the reservation.

Install the Red Hat OpenShift command-line interface utility

The Red Hat OpenShift command-line interface (CLI) utility, which is known as **oc**, must be installed on your local workstation. If you already installed the **oc** utility, you can proceed to [log in to the SNO cluster](#).

1. Click the following link to open a browser window to your ITZ reservations.

[ITZ My reservations](#)

2. Click the **Single Node OpenShift** tile.

3. Scroll down and record the **Cluster Admin Username** and **Cluster Admin Password**.

4. Click the **OCP Console** link.

Note: OCP stands for OpenShift Container Platform.

The screenshot shows the IBM Technology Zone portal. At the top, there are two cluster entries:

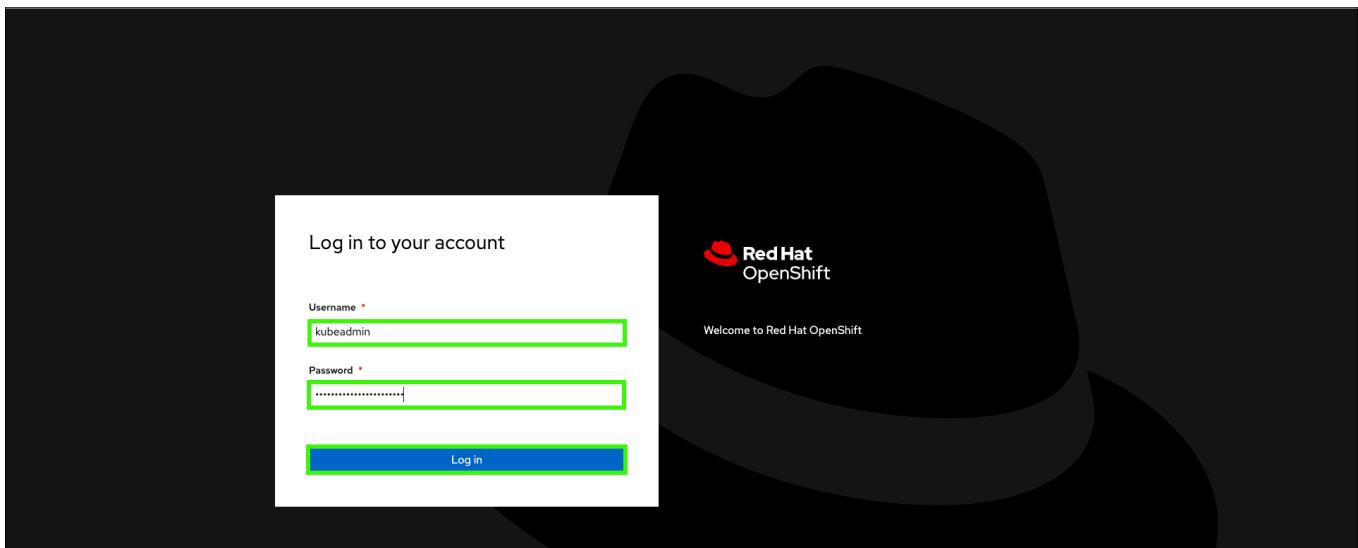

- 672371d38376796fb96a6c4d-master-1: Red Hat Enterprise Linux 8 (64-bit), IP 192.168.252.11, Running. A 'Console' button is shown.
- 672371d38376796fb96a6c4d-nfs: Red Hat Enterprise Linux 8 (64-bit), IP 192.168.252.17, Running. A 'Console' button is shown.

Below the clusters is a section titled 'Reservation Details' containing the following information:

- API URL: <https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443>
- Bastion Password: [REDACTED]
- Bastion RDP Address: api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:43389
- Bastion SSH connection: ssh itzuser@api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com -p 40222
- Bastion Username: itzuser
- Cluster Admin Username: kubeadmin
- Cluster Admin Password: [REDACTED]
- OCP Console: <https://console-openshift-console.apps.672371d38376796fb96a6c4d.ocp.techzone.ibm.com> (highlighted with a green box)
- OCP Version: 4.14
- vCenter: itzeu-vc.eu.cloud.techzone.ibm.com

At the bottom, there is a 'Download kubeconfig' button.

5. Enter the **Cluster Admin Username** and **Cluster Admin Password** values from step 3 and click **Log in**.

6. Click Help (?) and then click Command Line Tools.

The screenshot shows the Red Hat OpenShift admin console. The left sidebar has sections like 'Administrator', 'Home', 'Operators', 'Workloads', 'Networking', and 'Storage'. The 'Overview' section is selected. On the right, there is a message about OAuth configuration. A 'Help' icon (a question mark) is visible in the top right corner. A context menu is open over the 'Help' icon, with 'Command Line Tools' highlighted by a green box. Other options in the menu include 'Documentation', 'Share Feedback', 'About', 'Learning Portal', 'OpenShift Blog', and 'API Explorer'.

7. Click the link under **oc - OpenShift Command Line Interface (CLI)** for the operating system of your local machine.

The screenshot shows the 'Command Line Tools' section of the Red Hat OpenShift interface. On the left is a navigation sidebar with options like Home, Operators, Workloads, Networking, Storage, Builds, Observe, Compute, and User Management. The main content area has a blue header bar with the message 'You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.' Below this, there's a 'Copy login command' button. The 'oc - OpenShift Command Line Interface (CLI)' section is highlighted with a green dashed border. It contains a brief description: 'With the OpenShift command line interface, you can create applications and manage OpenShift projects from a terminal.' followed by a bulleted list of download links for 'oc' binary: 'Download oc for Linux for x86_64', 'Download oc for Mac for x86_64', 'Download oc for Windows for x86_64', 'Download oc for Linux for ARM 64', 'Download oc for Mac for ARM 64', 'Download oc for Linux for IBM Power, little endian', 'Download oc for Linux for IBM Z', and 'LICENSE'. At the bottom of the content area, there's a link to 'helm - Helm 3 CLI'.

Clicking the preceding link automatically downloads either a **.zip** or **.tar** file specific to your operating system. Unzip or untar the file. Place the **oc** binary for your operating system (**OS**) in a directory that is in your default PATH, or set the PATH environment variable to include the location of the **oc** binary.

8. Verify the installation by running the **oc** command on your local workstation.

```
oc --help
```

Sample output:

```
andrewjones@Andrews-MBP ~ % oc --help
OpenShift Client

This client helps you develop, build, deploy, and run your applications on any
OpenShift or Kubernetes cluster. It also includes the administrative
commands for managing a cluster under the 'adm' subcommand.

Basic Commands:
  login           Log in to a server
  new-project     Request a new project
  new-app          Create a new application
  status           Show an overview of the current project
  project          Switch to another project
  projects         Display existing projects
  explain          Get documentation for a resource

Build and Deploy Commands:
  rollout          Manage a Kubernetes deployment or OpenShift deployment
  config           Revert part of an application back to a previous deployment
```

Mac/OS users may need to adjust security settings.

The **oc** binary may cause a security exception. Adjust the security settings by opening the **System Settings** utility and clicking **Privacy & Security**. Under **Security** locate the message about the **oc** binary and click **Allow Anyway**. Return to the terminal window and try the `oc --help` command again and click **Allow Anyway** when prompted.

Prepare to ingest documents

Before ingesting documents, complete the following setup steps.

Log in to the OpenShift cluster from your local terminal

Note: If you just installed the **oc** utility, skip the next 5 steps.

1. Click the following link to open a browser window to your ITZ reservations.

[ITZ My reservations](#)

2. Click the **Single Node OpenShift** tile.

The screenshot shows the 'My reservations' section of the IBM Technology Zone interface. There are three reservation cards displayed:

- Single Node OpenShift (VMware on IBM Cloud)**: Status - Ready. Start date: Oct 31, 2024 7:02 AM. End date: Nov 6, 2024 6:49 AM. Extend limit: 0. Buttons: 'Open this environment' (highlighted with a green border) and a copy icon.
- watsonx Assistant for Z Pilot - AAP & z/OS**: Status - Ready. Start date: Oct 30, 2024 8:12 AM. End date: Nov 5, 2024 7:53 AM. Extend limit: 0. Buttons: 'Open this environment' and a copy icon.
- watsonx Assistant for Z Pilot - watsonx O...**: Status - Ready. Start date: Oct 30, 2024 8:10 AM. End date: Nov 5, 2024 7:12 AM. Extend limit: 0. Buttons: 'Open this environment' and a copy icon.

3. Scroll to the bottom of the reservation page and record the **Cluster Admin Username** and **Cluster Admin Password**.

The screenshot shows the 'Reservation Details' page for the 'Single Node OpenShift (VMware on IBM Cloud)' reservation. The 'Cluster Admin Username' field is highlighted with a green border and contains 'kubeadmin'. The 'Cluster Admin Password' field is also highlighted with a green border.

Log in

6. Click the **kube:admin** profile drop-down and click **Copy login command**.

You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.

Command Line Tools

[Copy login command](#)

oc - OpenShift Command Line Interface (CLI)

With the OpenShift command line interface, you can create applications and manage OpenShift projects from a terminal.

The oc binary offers the same capabilities as the kubectl binary, but it is further extended to natively support OpenShift Container Platform features.

- [Download oc for Linux for x86_64](#)

7. Click **Display Token**.

Display Token

8. Select and copy the **Log in with this token** string.

For most operating systems, double-click the value, then right-click and select **Copy**.

Your API token is
sha256~zuWR0KDnkYniIY0m8g8iKoUXPdFFFmou~o4s5FsrDNA

Log in with this token

```
oc login --token=sha256~zuWR0KDnkYniIY0m8g8iKoUXPdFFFmou~o4s5FsrDNA --server=https://api.672b79320c7a71b728e523b4.ocp.techzone.ibm.com:6443
```

Use this token directly against the API

```
curl -H "Authorization: Bearer sha256~zuWR0KDnkYniIY0m8g8iKoUXPdFFFmou~o4s5FsrDNA" "https://api.672b79320c7a71b728e523b4.ocp.techzone.ibm.com:6443/v1/users/~"
```

Request another token

[Logout](#)

A context menu is open over the token value, with 'Copy' highlighted.

9. Open a command prompt or terminal window on your local workstation.

10. Paste the login command and press **enter**.

```
andrewjones@Andrews-MBP ~ % oc login --token=sha256~mJ4L8K6cUMyNyk2Z69KMm3vbP1sWc8SW0eeOdVqtA94 --server=https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443
Logged into "https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443" as "kube:admin" using the token provided.
You have access to 70 projects, the list has been suppressed. You can list all projects with 'oc projects'
Using project "default".
andrewjones@Andrews-MBP ~ %
```

Create a working directory

1. Create a directory to store the configuration files that you will create in the next steps.

Instructions vary by your local workstation's operating system.

The directions that follow may vary depending on your operating system. The examples provided are based upon MacOS.

```
mkdir watsonxAssistant
```

2. Change to the new directory.

```
cd watsonxAssistant
```

```
andrewjones@Andrews-MBP ~ % oc login --token=sha256~mJ4L8K6cUMyNyk2Z69KMm3vbP1sWc8SW0eeOdVqtA94 --server=https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443
Logged into "https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443" as "kube:admin" using the token provided.
You have access to 70 projects, the list has been suppressed. You can list all projects with 'oc projects'
Using project "default".
andrewjones@Andrews-MBP ~ % mkdir watsonxAssistant
andrewjones@Andrews-MBP ~ % cd watsonxAssistant
andrewjones@Andrews-MBP watsonxAssistant %
```

Install IBM Certificate Manager on Red Hat OpenShift

1. In a text editor, create a file named `catalogCertManager.yaml` and paste the following text in the file.

Formatting of the yaml file is critical!

The content of the YAML file must be formatted exactly as shown. Use the **Copy** icon to prevent typographical errors.

File name:

```
catalogCertManager.yaml
```

File contents:

```
apiVersion: operators.coreos.com/v1alpha1
kind: CatalogSource
metadata:
  name: ibm-cert-manager-catalog
  namespace: openshift-marketplace
spec:
  displayName: ibm-cert-manager-4.2.7
  grpcPodConfig:
    securityContextConfig: restricted
    image: icr.io/cpopen/ibm-cert-manager-operator-
catalog@sha256:4dcf4ace4b5f166f83b31063f7e6404dbf78d8e98a9d4fcf52fedf576a55ca6c
  publisher: IBM
  sourceType: grpc
  updateStrategy:
    registryPoll:
      interval: 30m0s
```

2. Install the IBM Certificate Manager operator in the Red Hat OpenShift cluster.

```
oc apply -f catalogCertManager.yaml
```

The preceding command returns a message that states the **ibm-cert-manager-catalog** was created.

3. In the OpenShift web console, click **Operators** and then select **OperatorHub**.

The screenshot shows the Red Hat OpenShift web console interface. The left sidebar has a navigation menu with items like 'Administrator', 'Home', 'Operators' (which is highlighted with a green border), 'OperatorHub' (which is also highlighted with a green border), and 'Installed Operators'. The main content area has a blue header bar with the text 'You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.' Below the header, there's a section titled 'Command Line Tools' with a 'Copy login command' button. Another section titled 'oc - OpenShift Command Line Interface (CLI)' provides instructions on how to use the 'oc' binary and links to download it for various platforms.

4. Click the **Project** to pull-down menu and click the **Show default projects** toggle.

You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.

Red Hat

624 items

6. Enter **IBM Cert Manager** in the search field and then click the **IBM Cert Manager** tile.

Be patient.

It may take a minute or two for the **IBM Cert Manager** tile to appear.

Note: The current version of the operator may differ than the one shown in the image below.

You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.

Project: openshift-marketplace

Discover Operators from the Kubernetes community and Red Hat partners, curated by Red Hat. You can purchase commercial software through Red Hat Marketplace. You can install Operators on your clusters to provide optional add-ons and shared services to your developers. After installation, the Operator capabilities will appear in the Developer Catalog providing a self-service experience.

All Items

Q IBM Cert Manager X

ibm-cert-manager-4.2.7

IBM Cert Manager provided by IBM Operator for managing deployment of cert-manager service.

1 items

7. Click **Install**.

The screenshot shows the Red Hat OpenShift on IBM Techzone interface. The left sidebar is the OperatorHub. In the center, under the 'Operators' section, the 'IBM Cert Manager' operator is listed. The right side shows a detailed view of the operator, including its version (4.2.7), capability levels (Basic Install, Seamless Upgrades), and source (ibm-cert-manager-4.2.7). A large green 'Install' button is prominently displayed at the top of this panel.

8. Keep the default settings and click **Install**.

This screenshot shows the 'Install Operator' configuration page. It includes fields for 'Update channel' (set to v4.2), 'Version' (set to 4.2.7), and 'Installation mode' (set to 'All namespaces on the cluster (default)'). Below these, there are sections for 'Installed Namespace' (operator recommended namespace 'ibm-cert-manager' selected) and 'Update approval' (Automatic selected). On the right, there are several informational boxes: 'IBM Cert Manager' (provided by IBM), 'CertificateRequest' (not available), 'Cert Manager Config' (schema for certmanagerconfigs API), 'Challenge' (not available), 'ClusterIssuer' (not available), and 'Issuer' (an issuer represents a certificate issuing authority). At the bottom are 'Install' and 'Cancel' buttons, with the 'Install' button highlighted.

**Do not continue until...**

The installation process takes a few minutes. Do not continue until you see the following message: **Installed operator: ready for use.**

Install the watsonx Assistant for Z Operator (for OpenSearch)

1. In your command prompt or terminal window, create a new namespace called `wxa4z-byos` in the Red Hat OpenShift cluster.

```
oc create namespace wxa4z-byos
```

2. Create or obtain your IBM Container Software production entitlement key.

A production entitlement key is required to pull the container images that get deployed by the operator.

To create or retrieve your existing entitlement key, follow the instructions [here](#).

If additional assistance is needed, refer to this [site](#).

After locating your existing key or creating a new key, continue to the next step.

3. Click **copy** and record your entitlement key for future use in a secure location.

The screenshot shows the IBM Container Software and Cloud Pak Access Management interface. On the left, there's a sidebar with 'My IBM', 'Profile', 'Billing', and 'Entitlement keys' selected. Under 'Entitlement keys', it says 'Container software library'. The main area is titled 'Entitlement keys (1)'. It says 'Access your container software' and 'Your entitlement key allows you to access all your container software in the IBM Entitled Registry. For a full list of container software you own, view your [container software library](#)'. Below this, 'Active entitlement keys' are listed with one entry: 'Issue date: October 17, 2022'. To the right of this entry are 'Copy' (highlighted with a green box), 'Edit' (highlighted with a blue box), and 'Delete' (highlighted with a red box) buttons.

4. In your command prompt or terminal window, set an environment variable with your production entitlement key.

Substitute your production entitlement key copied in the last step for <entitlement key> .

```
export IBM_CS_ENT_KEY=<entitlement key>
```

5. Enter the following command to create a pull secret for the **Container Registry**.

```
oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --  
docker-username=cp --docker-password=$IBM_CS_ENT_KEY
```

The terminal session shows the creation of a pull secret for the Container Registry. The user runs the command `oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --docker-username=cp --docker-password=$IBM_CS_ENT_KEY`. The output shows the secret being created successfully.

6. In a text editor, create a file named `catalogSource.yaml` and paste the following text in the file.

Formatting of the yaml file is critical!

The content of YAML files must be formatted exactly as shown. Use the copy icon to prevent typographical errors.

File name:

```
catalogSource.yaml
```

File contents:

```

apiVersion: operators.coreos.com/v1alpha1
kind: CatalogSource
metadata:
  name: ibm-wxa4z-operator-catalog
  namespace: wxa4z-byos
spec:
  displayName: "IBM watsonx Assistant for Z Operator Catalog"
  image: icr.io/cpopen/ibm-wxa4z-
  catalog: 2.0.2@sha256:d457aa24af07c23d7b36727a9cff95995ca1c4ed49fb980ef4f386fd09a29b4
  publisher: 'IBM'
  sourceType: grpc
  secrets:
    - icr-pull-secret

```

7. Create your document catalog in the Red Hat OpenShift operator.

```
oc apply -f catalogSource.yaml
```

```

andrewjones@Andrews-MBP watsonxAssistant % oc create namespace wxa4z-byos

andrewjones@Andrews-MBP watsonxAssistant %

```

8. In the Red Hat OpenShift web console, click **OperatorHub** and select the **wxa4z-byos** project.

The screenshot shows the Red Hat OpenShift web console with the 'OperatorHub' section selected. The search bar at the top has 'Project: openshift-marketplace' selected. Below the search bar, there is a list of installed operators. The 'wxa4z-byos' project is highlighted with a green border in the search bar and listed in the results. The results are categorized into 'Community' and 'Marketplace'. Some operators are marked as '[DEPRECATED]'. The total count of items is 624.

9. Enter **ibm watsonx** in the search field and the click the **IBM watsonx Assistant for Z Operator Catalog** tile.

It may take a minute or two for the **IBM watsonx Assistant for Z Operator Catalog** tile to appear.

Note: The current version of the operator may differ than the one shown in the image below.

You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.

Deploy required secrets and the custom bring-your-own-search (BYOSearch) resources

1. In a text editor, create a file named `os-secret.yaml` and paste the following text in the file.

File name:

```
os-secret.yaml
```

Substitute a secure password of your choosing for the string `<OPENSEARCH_PASSWORD>`.

File contents:

```
apiVersion: v1
stringData:
  password: <OPENSEARCH_PASSWORD>
kind: Secret
metadata:
  name: opensearch-creds
  namespace: wxa4z-byos
type: Opaque
```

2. Create the secret by running the following command.

```
oc apply -f os-secret.yaml
```

3. In a text editor, create a file named `client-ingestion-secret.yaml` and paste the following text in the file.

File name:

```
client-ingestion-secret.yaml
```

Substitute a secure authentication key of your choosing for the string `<CLIENT_INGESTION_AUTHKEY>`. The authentication key can be a random password.

File contents:

```
apiVersion: v1
stringData:
  authkey: <CLIENT_INGESTION_AUTHKEY>
kind: Secret
metadata:
  name: client-ingestion-authkey
  namespace: wxa4z-byos
type: Opaque
```

4. Create the secret by running the following command.

```
oc apply -f client-ingestion-secret.yaml
```

5. Obtain and record your cluster domain that is used for routes by running the following command.

```
oc -n openshift-ingress-operator get ingresscontroller default -o jsonpath=".status.domain"
```

The output from the command does not include a newline.

The value returned for the cluster domain does not include a newline. When copying the value do not include the character or characters used for your command line prompt. Do not include the your prompt in the next step!

Note: The output of the command will be a string similar to:

apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com

6. In a text editor, create a file named `byos.yaml` and paste the following text in the file.

File name:

```
byos.yaml
```

Substitute the domain name recorded in the previous step for the string `<YOUR_CLUSTER_DOMAIN>`.

File contents:

```

apiVersion: wxa4z.watsonx.ibm.com/v1
kind: BYOSearch
metadata:
  name: byosearch
  namespace: wxa4z-byos
spec:
  imagePullSecrets:
    - name : icr-pull-secret
  namespace: wxa4z-byos
  clusterName: wxa4z-byos-cluster
  clusterDomain: <YOUR_CLUSTER_DOMAIN>

  opensearch:
    secretName: opensearch-creds

  persistence:
    enabled: true
    storageClass: "managed-nfs-storage"
    accessModes:
      - ReadWriteOnce
    size: 24Gi

  wrapper:
    createRoute: true
    resources:
      requests:
        cpu: 4
        memory: "500Mi"
      limits:
        cpu: 4
        memory: "1Gi"

  clientIngestion:
    secretName: client-ingestion-authkey

    resources:
      limits:
        cpu: "500m"
        memory: 2Gi
        nvidia.com/gpu: "0"
      requests:
        cpu: "500m"
        memory: 1Gi
        nvidia.com/gpu: "0"
    pvc:
      storageClass: "managed-nfs-storage"
      enabled: true
      size: 24Gi

```

7. Run the following command to deploy BYOS on your cluster.

```
oc apply -f byos.yaml
```

Verify all the required pods are running and get the network route to your BYOS instance

1. In the OCP console, verify that all pods have the status of **Running** or **Completed**.

⚠️ Do not continue until...

The BYOS deployment can take 20 minutes or more to complete. Do not continue until all the pods have a status of "Running" or "Completed". The next step is to retrieve your BYOS endpoint URL.

3. Copy and record the location for the **wxa4z-opensearch-wrapper** route.

Name	Status	Location	Service
wxa4z-client-ingestion	Accepted	https://wxa4z-client-ingestion-wxa4z-byos.apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com	wxa4z-client-ingestion
wxa4z-opensearch-wrapper	Accepted	https://wxa4z-opensearch-wrapper-wxa4z-byos.apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com	wxa4z-opensearch-wrapper

Update your assistant with the new BYOS instance route

You are now ready to configure your assistant with the route to your BYOS instance.

1. Using the network route for your BYOS instance, append the string /v1/query to complete the URL endpoint.

The URL should look similar to:

```
https://wxa4z-opensearch-wrapper-wxa4z-
byos.apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com/v1/query
```

Important: The above URL will not work for you. Use the value of your specific OpenSearch instance that is recorded in the previous step.

2. Update your assistant's custom search integration URL.

Next, you need to return to your assistant in the watsonx Orchestrate AI assistant builder and update the custom search integration URL. The steps to update the URL are illustrated in the animated gif that follows. You can review the steps to accomplish this [here](#) (be sure to use your BYOS URL and not the shared URL specified in the lab guide).

Name	Status	Location	Service
wxa4z-client-ingestion	Accepted	https://wxa4z-client-ingestion-wxa4z-byos.apps.67b79320c7a7b728e523b4.ocp.techzone.ibm.com	wxa4z-client-ingestion
wxa4z-opensearch-wrapper	Accepted	https://wxa4z-opensearch-wrapper-wxa4z-byos.apps.67b79320c7a7b728e523b4.ocp.techzone.ibm.com	wxa4z-opensearch-wrapper

Troubleshooting

The following are issues that you may encounter. If the provided resolutions do not work, contact support by using the methods that are mentioned in the [Support](#) section.

✖ Pods have a status of ErrImagePull or ImagePullBackoff

If the pods starting with **ibm-wxa4z-operator** have a status of “ErrImagePull” or “ImagePullBackoff”, you can delete the pod and it will automatically restart and pull the image successfully. Wait until the pod is re-created successfully.

✖ The wxa4z-client-ingestion pod does not start

Did you include the % character in the **clusterDomain** name when creating the **byos.yaml**? To resolve, edit the **byos.yaml** file and run the following command again. The current pod will be terminated and a new one started. This will take about 20 minutes to start.

```
oc apply -f byos.yaml
```

Installing and using zassist to ingest client documents

With bring-your-own-search (BYOS) installed and configured in your assistant, you can now prepare for document ingestion. Currently, only PDF, HTML, and DOCX file formats are supported for ingestion.

Below is a high-level, logical architecture of the environment you will deploy in this section.

To prepare for document ingestion, you can also reference the setup instructions that are located [here](#).

Install the zassist utility

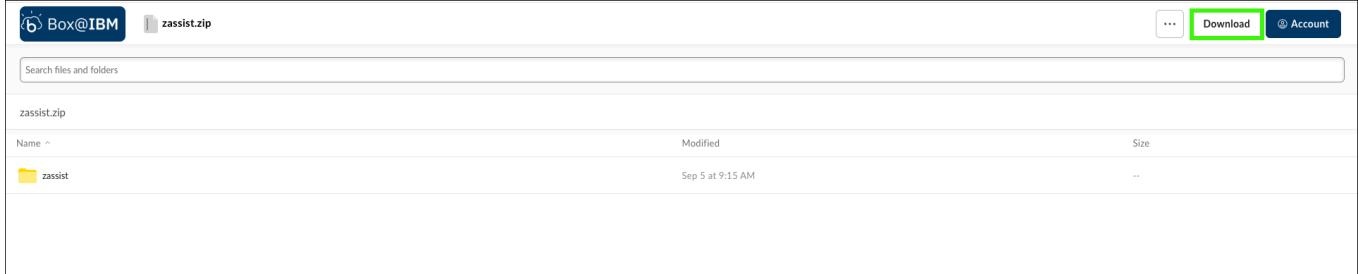

The **zassist** utility is an executable program that automates the ingestion of client documentation into the RAG for Watsonx Assistant for Z. A version of zassist is available for download for IBMers and Business Partners for conducting pilots. Follow the steps below to download and install **zassist**.

How do clients get the zassist utility?

The utility is available to clients through [IBM Passport Advantage](#).

1. Click the following link and download the **zassist.zip** file.

<https://ibm.box.com/s/j3nt5iw4fqd5w2jgcqwxnjlsu8bpvl77>

A screenshot of the IBM Box web interface. At the top, it shows 'Box@IBM' and the file name 'zassist.zip'. Below is a search bar and a table listing the file. The table has columns for Name, Modified, Size, and Kind. The single item listed is 'zassist' with a modified date of 'Sep 5 at 9:15 AM', size of '--', and kind of 'ZIP archive'. At the top right of the table are 'Download' and 'Account' buttons.

2. Extract the **zassist.zip** file.

3. Locate the appropriate file for your local workstation's operating system.

A screenshot of a file explorer window titled 'watsonxAssistant'. The left pane shows a tree view of files and folders. The 'zassist' folder is expanded, revealing subfolders 'linux', 'mac', 'mac-arm', and 'windows'. Inside the 'mac' folder, there is a file named 'zassist' which is highlighted with a green selection rectangle. Other files visible include 'byos.yaml', 'ca.crt', 'catalogCertManager.yaml', 'catalogSource.yaml', 'client-ingestion-secret.yaml', 'os-secret.yaml', and 'zassist.zip'. The right pane displays a detailed list of these items with columns for Name, Date Modified, Size, and Kind.

Name	Date Modified	Size	Kind
byos.yaml	Today at 12:17 PM	956 bytes	YAML
ca.crt	Today at 11:36 AM	Zero bytes	certificate
catalogCertManager.yaml	Today at 9:15 AM	476 bytes	YAML
catalogSource.yaml	Today at 9:25 AM	397 bytes	YAML
client-ingestion-secret.yaml	Today at 10:05 AM	155 bytes	YAML
os-secret.yaml	Today at 10:04 AM	149 bytes	YAML
zassist	Sep 5, 2024 at 11:15 AM	--	Folder
linux	Sep 18, 2024 at 8:15 AM	--	Folder
mac	Sep 18, 2024 at 8:15 AM	--	Folder
zassist	Sep 18, 2024 at 8:17 AM	10.2 MB	Unix Executable File
mac-arm	Sep 18, 2024 at 8:15 AM	--	Folder
windows	Sep 18, 2024 at 8:15 AM	--	Folder
zassist.zip	Today at 1:47 PM	23 MB	ZIP archive

4. Either copy the appropriate **zassist** file to a directory in your PATH, or add the appropriate directory to your PATH environment variable.

Additional information for running the preceding tasks can be found [here](#).

5. Run the **zassist** command to verify it is working.

A screenshot of a terminal window titled 'watsonxAssistant -- zsh -- 157x40'. The user has run the command 'zassist'. The output shows an error message: 'zassist: error: expected one of "version", "init", "login", "ingest", "load", ...'. The terminal window also shows the user's path: 'andrewjones@Andrews-MacBook-Pro ~ % PATH=\$PATH:'.

Mac/OS users may need to adjust security settings.

The **zassist** binary may cause a security exception. Adjust the security settings by opening the **System Settings** utility and clicking **Privacy & Security**. Under **Security** locate the message about the **zassist** binary and click **Allow Anyway**. Return to the terminal window and try running the command again.

Ingest client documentation using zassist

With the **zassist** command installed, you are now able to begin ingesting data.

Step-by-step guidance for ingesting documents using zassist is provided in the IBM watsonx Assistant for Z documentation.

Follow the directions [here](#) to ingest documents using zassist.

These steps are not repeated in this lab guide. The following video illustrates the steps to ingest a single document. The document that is ingested in the video is a compressed PDF of the **IBM z/OS Continuous Delivery Red Piece**. You can download a copy of this document [here](#).

Note: The video has no audio.

Don't see the video in the PDF version of the lab guide?

If you are viewing the [PDF](#) of the lab guide, you can access the video [here](#).

Verify the document that is ingested is now returned as a source file for a query

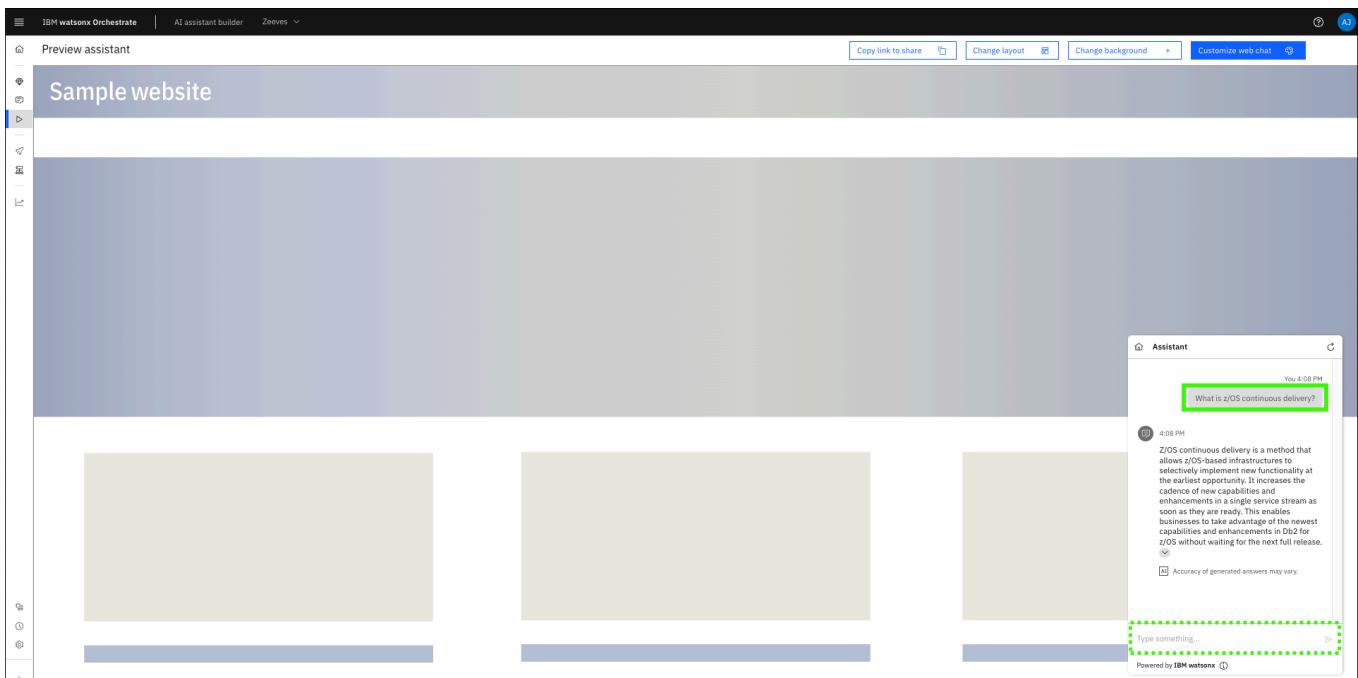

Use the watsonx Orchestrate AI assistant builder to verify your document ingestion.

1. Hover over the **Home** () icon and click **Preview**.
2. Click the **Restart conversation** () icon.

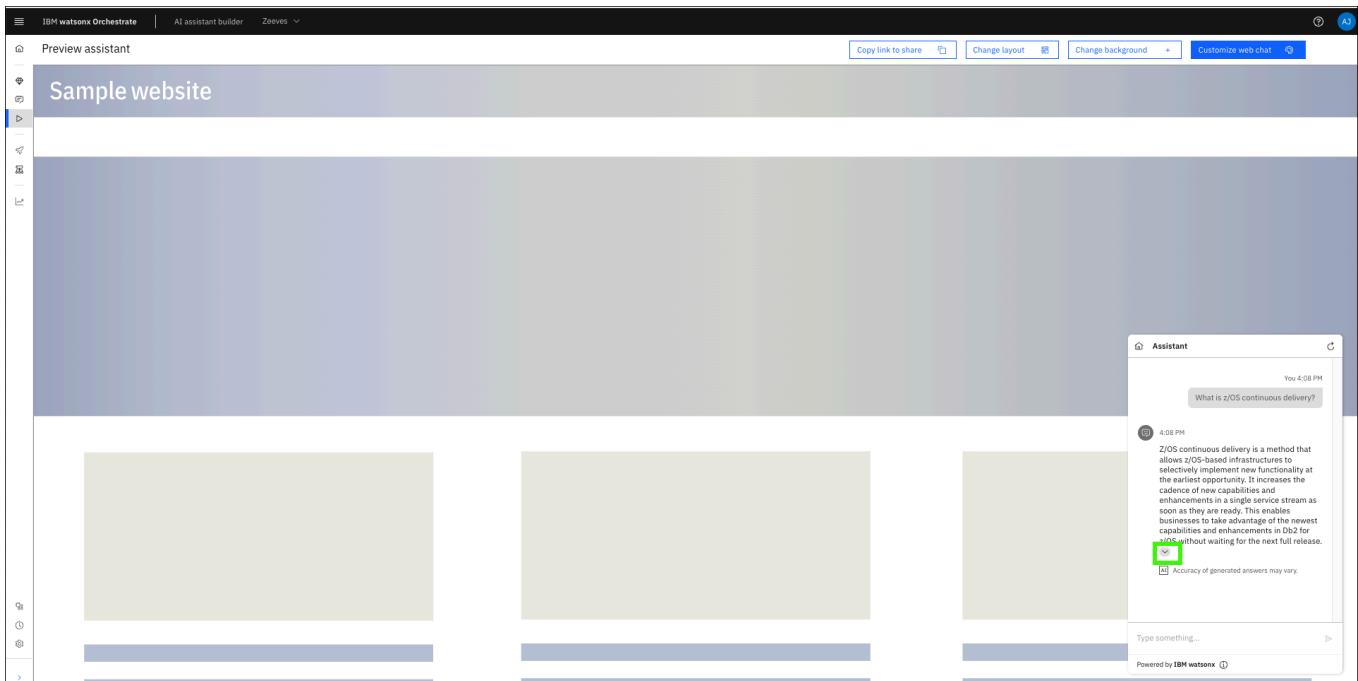

3. Enter the following prompt in your assistant.

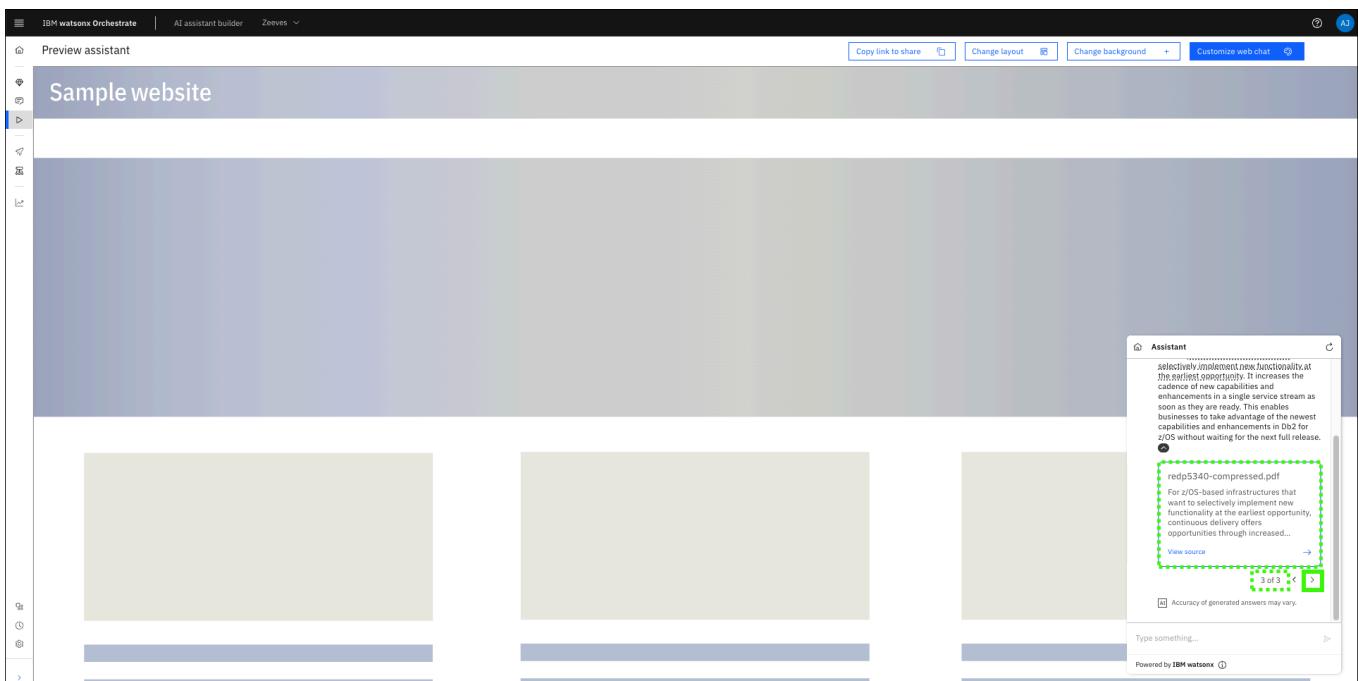

What is z/OS continuous delivery?

4. Clicking the Down arrow (▼).

5. Click through the list of resources and find the reference to the Red Piece document you ingested.

6. Click the ingested document reference.

7. Accept the security risk to view the source document.

The steps to accept the security risk for the document are not shown. The risk occurs because the certificate for the connection to the SNO instance is not secure. Notice that the URL contains the path to your SNO instance route.

Adjusting the search behavior

Do you recall the **Metadata** field when you configured your assistant?

The screenshot shows the 'Custom service' configuration page in the AI assistant builder. The 'Metadata' field is highlighted with a green dashed border. The JSON example provided is:

```
{
  "example_field": "example_value",
  "other_example_field": 7
}
```

The Metadata field provides a way to adjust your assistant's behavior during conversational search for your OpenSearch instance. Now that you have your own docs that are ingested for conversational search, you can set the metadata field for your assistant to use those documents in its content-grounded search. If you leave the metadata field empty, then it defaults to settings found to perform well. This replaces having to paste a complicated search string.

If you leave this field empty, OpenSearch will rely on the default settings, which means OpenSearch will search all of the default IBM-provided documentation and all of the ingested customer documentation using the following value:

```
{"ibm_indices": "*_ibm_docs_slate",
"customer_indices": "customer_*"}
```

Replacing the wildcard string with an explicit list of indices allows for personalization. The metadata setting is where you can input specific indices (pointing to the underlying documentation) that you want your assistant to use for the content-grounded search. There are over 220 products and topics that the OpenSearch instance has IBM Documentation for. You can find those indices and products [here](#).

You can input a subset of indices into the "Metadata" field in cases where you only want your assistant to gather context for specific IBM products or topics. The specific indices can be listed out in this format:

```
{"ibm_indices": "<comma separated index values>", "customer_indices": "customer_*"}
```

For example, if you only want your assistant to reference documentation for "Db2 Analytics Accelerator for z/OS" and no ingested client documentation, you can enter the following into the metadata field:

```
{"ibm_indices": "ss4lq8_ibm_docs_slate"}
```

If you have a mix of IBM Documentation and client documentation ingested, then there's an optional search string that you can use to set the "weights" used for each.

For example:

```
{"doc_weight":  
{"product_docs":0.5,  
"customer_docs":0.5},  
"ibm_indices":"*_ibm_docs_slate",  
"customer_indices":"customer_**"  
}
```

In this case, "product_docs" is the weight that is assigned to "ibm_indices" and "customer_docs" is the weight that is assigned to "customer_indices".

After you have configured all the settings for Conversational Search on the page, be sure to click **Save** in the upper-right of the page.

For more information on customizing the metadata field for conversational search, refer to this supplemental video found [here](#).

You are encouraged to experiment with the metadata field!

Try setting the metadata field to the following, which weights ingested docs higher than the product docs:

```
{"doc_weight":  
{"product_docs":0.2,  
"customer_docs":0.8},  
"ibm_indices":"*_ibm_docs_slate",  
"customer_indices":"customer_**"  
}
```

Repeat the earlier steps to restart the assistant preview (⟳) and reissue your queries. Notice that the ingested Red Piece document is now the first sited reference!

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with icons for navigation and a preview assistant section labeled 'Sample website'. The main area displays three large, light-grey rectangular blocks representing website content. On the right, there's an 'Assistant' window. It shows a message from 'redp5340-compressed.pdf' with a timestamp of '4:30 PM'. The message discusses the availability of new functionality in z/OS-based infrastructures and how continuous delivery offers opportunities through increased functionality rollback. Below the message, there's a 'View source' button and a small navigation bar with arrows. At the bottom of the screen, there's a footer bar with the text 'Powered by IBM Watsonx'.

For client pilots

If you or your client have other documents to ingest, you can do so by repeating the steps using zassist. The Velocity Pilot ITZ environment is limited in compute and storage capacity. The following limits should be adhered to:

- Greater than 15,000 documents is not supported.
- Individual documents should be less than 10 megabytes (MB).
- Larger documents greater than 50 MB should work if the document contains mostly images.
- Loading documents can take a long time, especially with > 100 MB of text.
- It is recommended to run large loads late at night.
- When loading, ensure your workstations does not sleep during the process.
- If you receive a **batch time error**, set the batch size to a lower number for that command. For example:

```
zassist ingest . -s 50
```

After ingesting all your additional documents, proceed to the next section to learn about adding skills to your assistant.

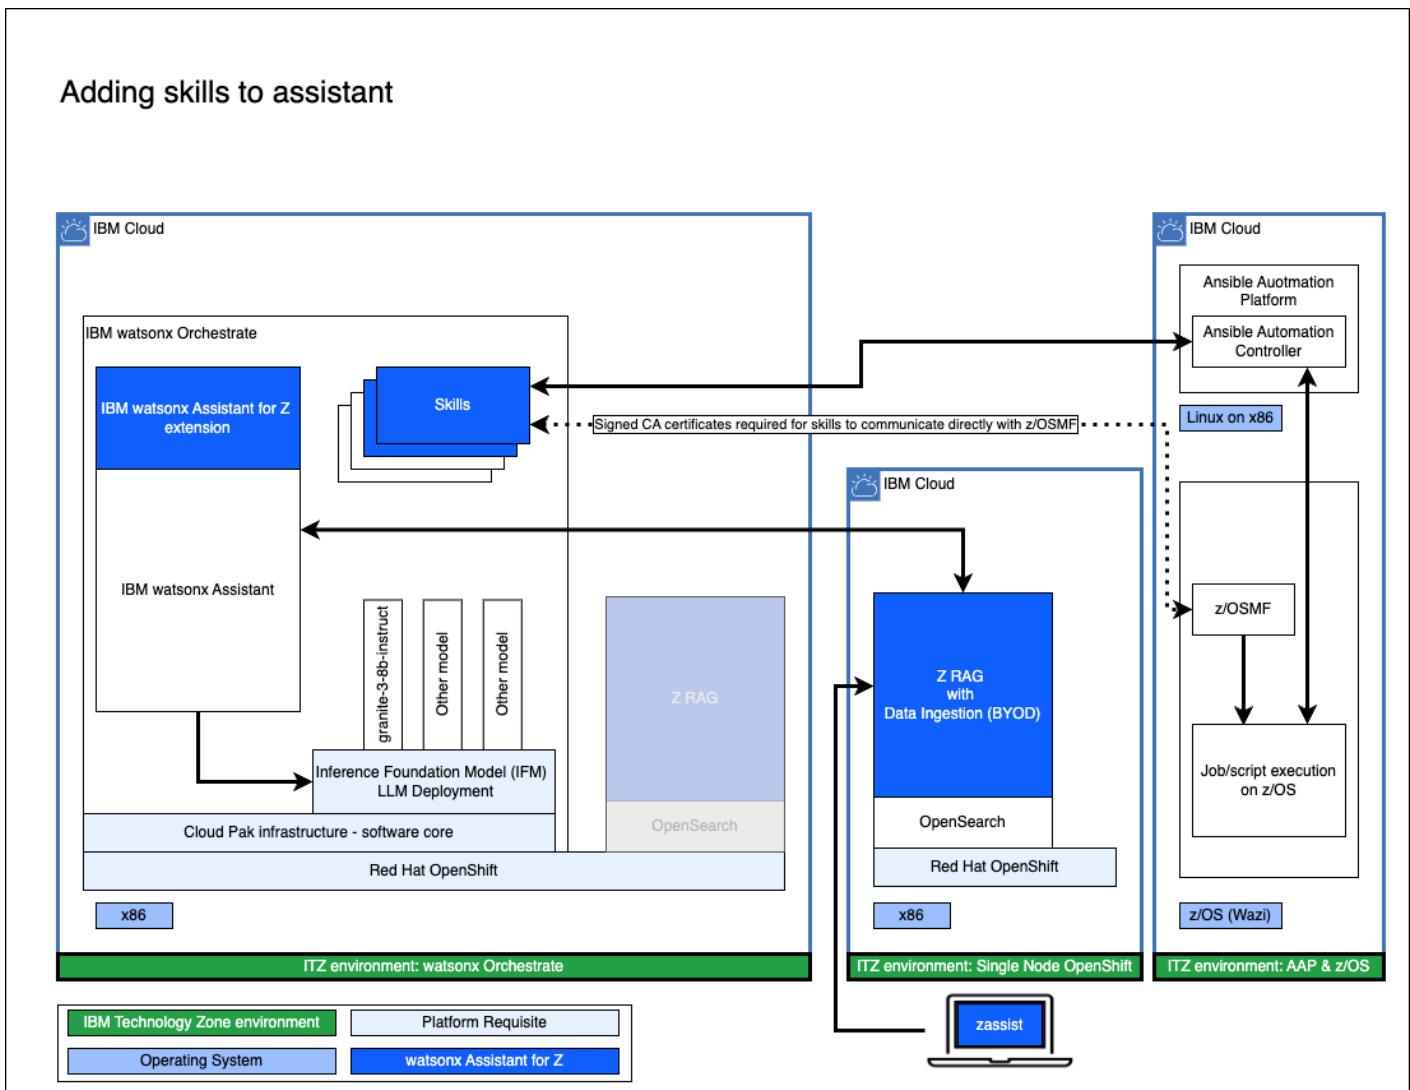

Adding skills to the assistant

Getting started with skills and actions

Watsonx Assistant for Z can import skills to automate a range of IBM Z related tasks through assistant interactions. Each skill is a pre-defined automation that runs tasks to accomplish some unit or units of work. For example, you can use a skill to view z/OS IPL information, or work with z/OS datasets.

IBM watsonx Assistant for Z provides an extension within watsonx Orchestrate to build new skills from Ansible Automation platform or z/OS Management Facility (z/OSMF). The Z Skills Accelerator extension connects Ansible and z/OS application programming interfaces (APIs) and can import automation as Ansible Playbooks, JCL, or REXX as skills. Learn more importing and building skills [here](#).

Below is a high-level, logical architecture of the environment you will deploy in this section.

Environments

Watsonx Orchestrate

The Z Skills Accelerator extension is already configured in your watsonx Orchestrate IBM Technology Zone (ITZ) environment. You can use this component to import new skills.

Ansible Automation Platform and Wazi as a Service

To import skills for automations, you use Ansible Automation Platform (AAP) and Wazi as a Service (Wazi aaS) to serve as the z/OS back-end. Learn more about AAP [here](#). Learn more about Wazi, [here](#).

The two resources are provisioned together in the ITZ environment that you reserved earlier. This environment enables the ability to manage and automate z/OS tasks and subsystems with various preinstalled ansible playbooks. It includes a z/OS back-end (Wazi as a Service) with all needed prerequisites.

The playbooks provided cover various use cases for automating z/OS management. Ansible's capabilities for automating various Z-specific tasks are not limited to the use cases that are preinstalled in the AAP instance. The preinstalled playbooks are tasks from the 'IBM z/OS core collection'. Using this environment accelerates the ability to showcase the value of watsonx assistant for Z, and to get started with simple automations that can be expanded.

The ITZ environment gives you access to AAP, which is preconfigured to target the accompanying z/OS Wazi system, along with web-based access to AAP to experiment with different playbook templates. These templates are imported into watsonx Orchestrate as skills and connected to your assistant.

For more information on the AAP and Wazi z/OS environments, refer to this [document](#).

The playbook templates that are preinstalled in AAP cover various use cases, which you can explore, including:

- z/OS Certificate Management (create, delete, list, and renew certificates)
- dataset management (create, delete, fetch datasets)
- Submit JCL
- Run Operator commands
- Run TSO commands
- And more

Each of the sections that follow build upon each other. Complete each to successfully enhance your assistant by starting with [Explore Ansible Automation Platform](#).

Explore Ansible Automation Platform

After you reserved the Ansible Automation Platform (AAP) and Wazi z/OS environment in IBM Technology Zone (ITZ) and the reservation is in the **Ready** state, follow these steps to explore AAP.

Access the AAP and Wazi as a Service environment

Be sure to record the information as instructed

Several of the steps below instruct you to record values from your ITZ reservation. Be sure to do this as they will not only be used in this section, but also in later sections of the lab guide.

1. In the IBM Technology Zone portal, expand **My TechZone** and select **My Reservations**, or click the following link.

[ITZ My reservations](#)

2. Click the **watsonx Assistant for Z Pilot - AAP & z/OS** tile.

3. Locate and record the **AAP User Name (For UI access)** and **AAP User Password** fields.

The screenshot shows the IBM Technology Zone interface with the following details:

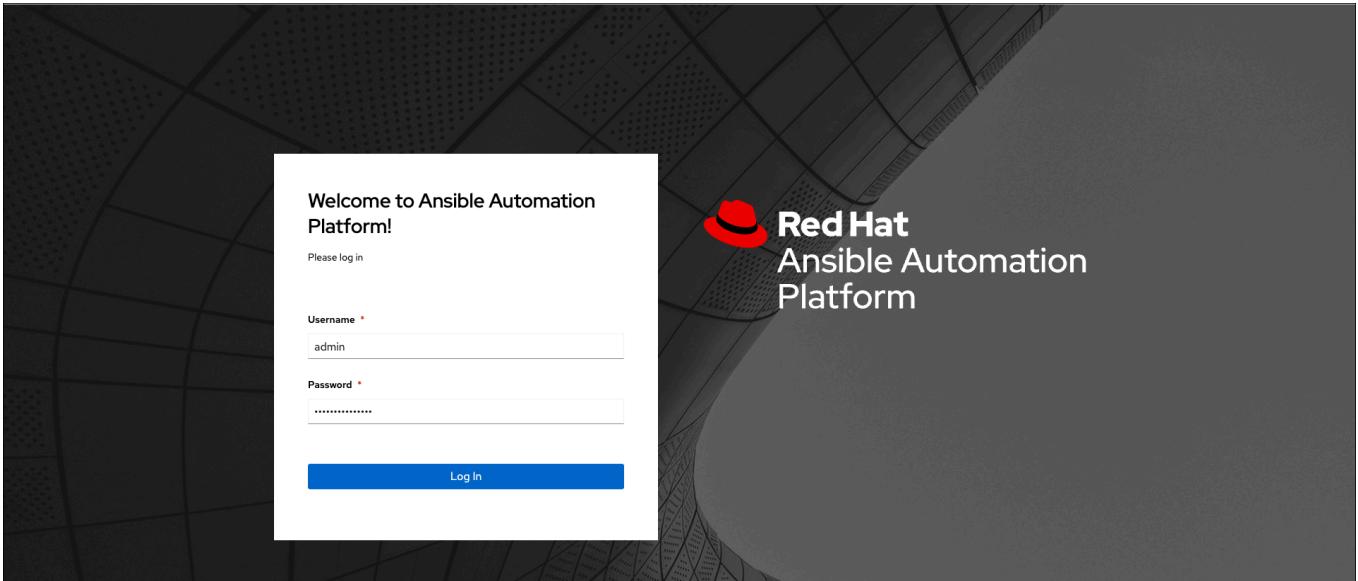

- Idle runtime limit:** 10800
- Reservation Details:**
 - Ansbile Automation Platform Cockpit UI: <https://itvsi-aap-phdhuzr.techzone.ibm.com:9090>
 - Ansbile Automation Platform Private IP: 10.241.0.6
 - Ansbile Automation Platform Public IP: 150.239.83.37
 - Ansbile Automation Platform UI: <https://itvsi-aap-phdhuzr.techzone.ibm.com>
 - AAP User Name (For SSH access): U6VO7N3
 - AAP User Name (For UI access): admin
 - AAP User Password: 39hQc-NiS458-Wa
 - AAP VSI Management: https://cloud.ibm.com/vpc-ext/compute/vs/us-east-0757_d038c79d-2fc8-45fd-8429-5bc642623771?view=edit&bs_account=7fd16281c12c4681b91417749e322845
 - z/OS Private IP: 10.241.0.7
 - z/OS Public IP: 169.63.103.211
 - z/OS User Name (Use SSH key to login, not password): IBMUSER
 - z/OS VSI Management: https://cloud.ibm.com/vpc-ext/compute/vs/us-east-0757_d729cb11-98ff-4453-8f74-acc8c595be1?view=edit&bs_account=7fd16281c12c4681b91417749e322845
 - User SSH key: [dropdown menu]

4. Record and then click the Ansible Automation Platform UI link.

The screenshot shows the IBM Technology Zone interface with the following details:

- Idle runtime limit:** 10800
- Reservation Details:**
 - Ansbile Automation Platform Cockpit UI: <https://itvsi-aap-phdhuzr.techzone.ibm.com:9090>
 - Ansbile Automation Platform Private IP: 10.241.0.6
 - Ansbile Automation Platform Public IP: 150.239.83.37
 - Ansbile Automation Platform UI: <https://itvsi-aap-phdhuzr.techzone.ibm.com>
 - AAP User Name (For SSH access): U6VO7N3
 - AAP User Name (For UI access): admin
 - AAP User Password: 39hQc-NiS458-Wa
 - AAP VSI Management: https://cloud.ibm.com/vpc-ext/compute/vs/us-east-0757_d038c79d-2fc8-45fd-8429-5bc642623771?view=edit&bs_account=7fd16281c12c4681b91417749e322845
 - z/OS Private IP: 10.241.0.7
 - z/OS Public IP: 169.63.103.211
 - z/OS User Name (Use SSH key to login, not password): IBMUSER
 - z/OS VSI Management: https://cloud.ibm.com/vpc-ext/compute/vs/us-east-0757_d729cb11-98ff-4453-8f74-acc8c595be1?view=edit&bs_account=7fd16281c12c4681b91417749e322845
 - User SSH key: [dropdown menu]

5. Enter the **Username** and **Password** that is recorded in step 3 and click **Log In**.

6. Click **Templates** under the **Resources** section.

The AAP instance is preconfigured to the Wazi aaS instance

Note that because the AAP instance and the back-end z/OS system are preconfigured, no changes are needed to execute the templates and they will target your provisioned z/OS system by default.

7. Locate the **z/OS Ping** template and click the rocket (🚀) icon to start the template.

Views	z/OS Data Set - Delete	Job Template	Default			
Dashboard	z/OS Data Set - Fetch	Job Template	Default			
Schedules	z/OS Gather Facts	Job Template	Default	1/5/2024, 6:55:04 AM		
Activity Stream	z/OS Job Submit	Job Template	Default	1/5/2024, 6:55:18 AM		
Workflow Approvals	z/OS Job Submit Any	Job Template	Default			
Host Metrics	z/OS Jobs - Submit, Query, Retrieve	Job Template	Default			
Subscription Usage	z/OS Operator Command	Job Template	Default			
Resources	z/OS Ping	Job Template	Default	1/7/2024, 8:33:06 AM		
Access	z/OS TSO Command(s)	Job Template	Default			

8. Observe the z/OS Ping job run.

Jobs > 9 - z/OS Ping

```

Take time to explore the other templates that are ready to use. Learn more about the automation capabilities [here](#).

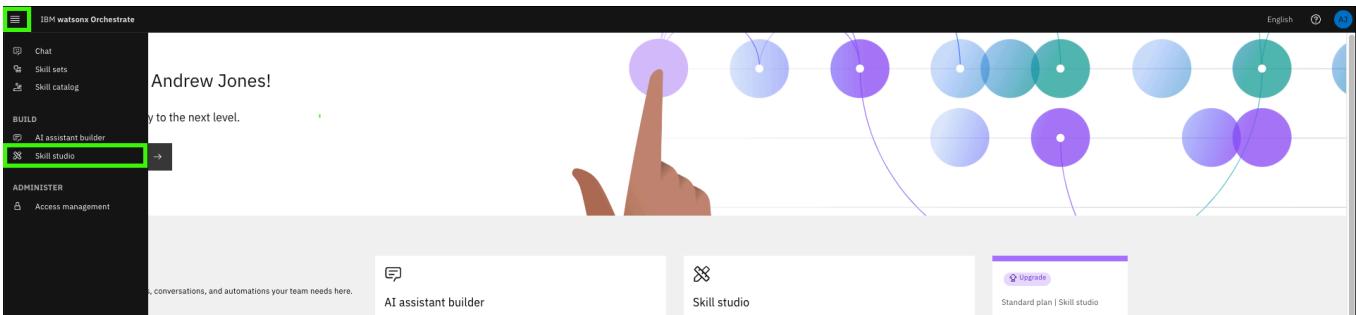

Importing skills from Ansible Automation Platform

Now that you understand Ansible Automation Platform (AAP) and the preinstalled automations available, you can import them as skills into your watsonx Orchestrate instance, which is used for assistant guided actions.

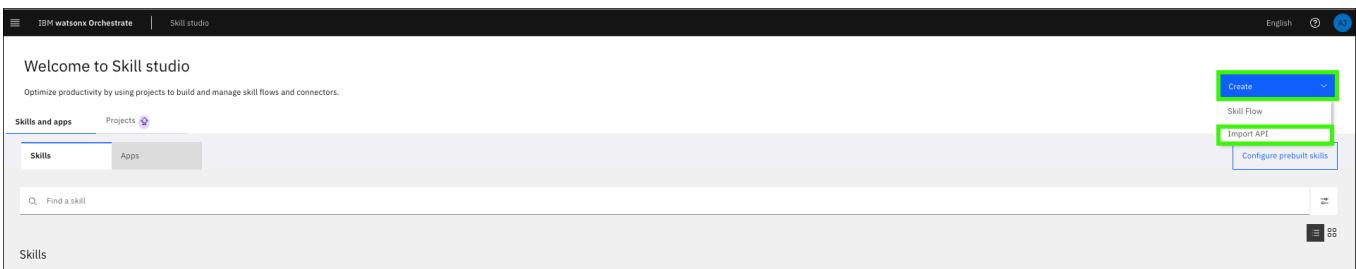

Import skills into your assistant

The next steps assume that you have an active browser window to the watsonx Orchestrate ITZ cloud account. If you do not, refer to the initial steps in [Creating an assistant and configuring conversational search](#).

1. Return to your watsonx Orchestrate instance and expand the main menu and click **Skill studio**.

2. Expand **Create** and click **Import API**.

3. Click the **z/OS Skills accelerator (Trial)** tile.

4. Enter the following values in the **z/OS Skills accelerator** form and then click **Connect**.

Use the **URL**, **User Name**, and **Password** values recorded in the [Explore Ansible Automation Platform](#) section earlier.

a: Connection Type: ansible

b: Application Name: <enter a meaningful name for the skills that you will import> - *be sure to remember this name, you will need in the next section*

c: Connection URL: <enter the URL for your AAP UI>

d: User Name: <enter the AAP User Name (for UI access)>

e: Password: <enter the AAP User Password>

f: Search Pattern: *

5. Expand the Ansible Job Template Proj... folder.

Explore the other available skills

Take time to explore the available skills. There are many utility skills provided out of the box with the "Z Skills Accelerator" which are needed for actions such as retrieving the output of an Ansible skill. Consider importing these utility skills to enable more complete automation execution flows.

6. Click **aap4zos**.

Skill	Description	Status
Z/os ping	Z skills - this playbook pings...	Ready to add
Z/os gather facts	Z skills - this sample playbook...	Ready to add
Z/os job submit	Z skills - this playbook shows...	Ready to add
Z/os job submit any	Z skills - a playbook for subm...	Ready to add
Z/os jobs - submit, query, ret...	Z skills - this sample playbook...	Ready to add

7. Select the skills you want to import into your application and then click **Save as draft**.

For this lab, select the **Z/os ping** and **Z/os gather facts** skills.

Skill	Description	Status
Z/os ping	Z skills - this playbook pings...	Ready to add
Z/os gather facts	Z skills - this sample playbook...	Ready to add

z/OS Gather Facts	Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
z/OS Ping	Just 1 step away to be ready	Ready to publish	Imported	andrew@jones-tx.com	November 19 2024

The selected skills are now ready for use and available to your assistant. In the next section, learn how to connect them to your assistant.

Connecting skills to your assistant

Once you have a subset of skills published, the application you created can be connected to your assistant.

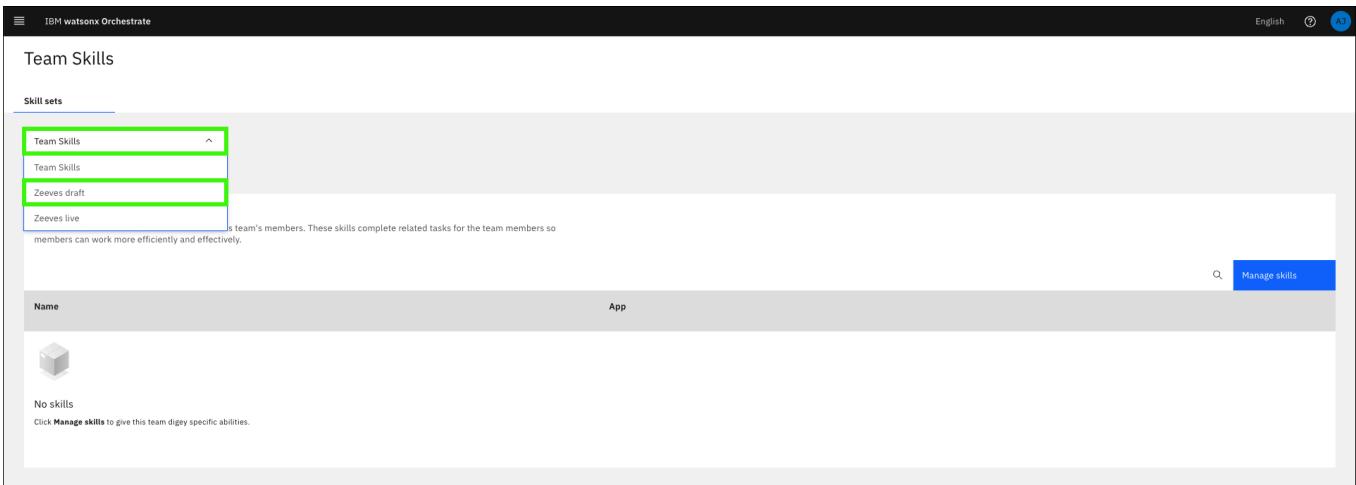

1. Expand the main menu and select **Skill sets**.

The screenshot shows the IBM Watsonx Orchestrate interface. The left sidebar has sections for Chat, Skill sets (which is highlighted with a green box), Skill catalog, BUILD (AI assistant builder, Skill studio), and ADMINISTER (Access management). The main area is titled "Skill studio" and contains a table of published skills:

Step in the process	Status	Skill type	Author	Last edited
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024

2. Click the **Team Skills** drop-down and select the **Draft** of your assistant.

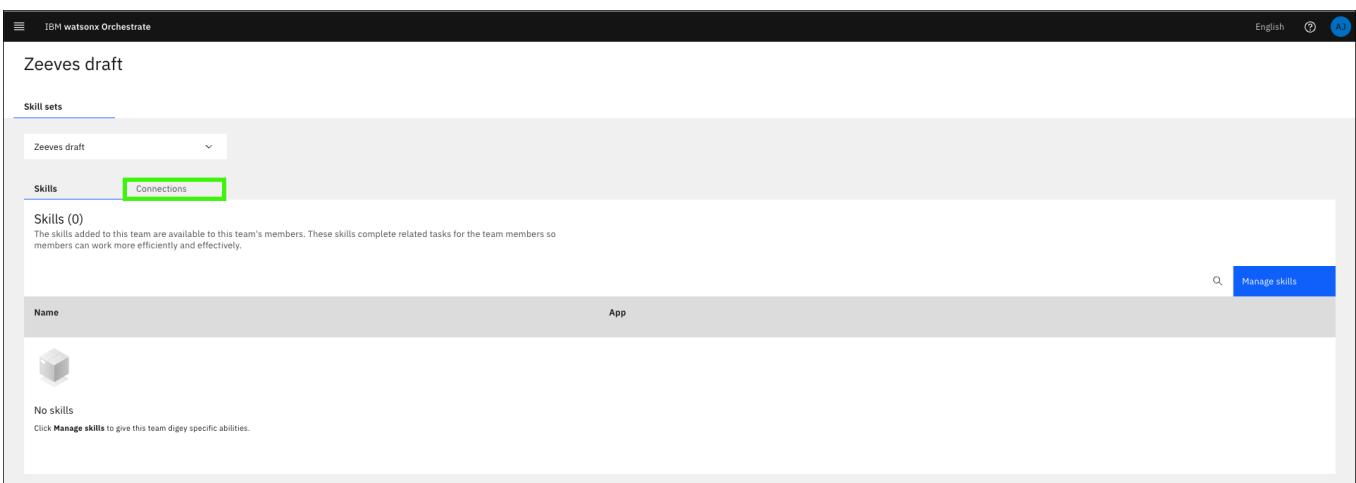

The screenshot shows the "Team Skills" page. The "Skill sets" dropdown menu is open, showing "Team Skills" and "Zeeves draft" (which is highlighted with a green box). Below the dropdown, there is a message about team skills. The main area shows a table with one row:

Name	App
No skills	

A note says "Click Manage skills to give this team digest specific abilities." There is a "Manage skills" button at the top right.

3. Click the **Connections** tab.

The screenshot shows the "Zeeves draft" page with the "Connections" tab selected (highlighted with a green box). The "Skills" tab is also visible. A note says "The skills added to this team are available to this team's members. These skills complete related tasks for the team members so members can work more efficiently and effectively." Below this is a table with one row:

Name	App
No skills	

A note says "Click Manage skills to give this team digest specific abilities." There is a "Manage skills" button at the top right.

4. Click the Search (🔍) icon.

Continue to the next section to create actions for your assistant.

Creating actions for your assistant

Once the skills in your application are connected to your assistant, you're ready to begin creating actions tied to those skills. Learn more about building actions [here](#)

Configure the number of input fields

Before configuring actions, it's important to modify a setting within watsonx Orchestrate that allows triggered skills to display as forms (versus conversational skills).

1. Click your (a) profile icon and then click (b) **Settings**

Learn more about configuring input fields [here](#).

The screenshot shows the IBM Watsonx Orchestrate web interface. At the top, there's a navigation bar with a profile icon (labeled 'a') and a search bar. Below the bar, the title 'Zeeves draft' is displayed. On the left, there's a sidebar with 'Skill sets' and a dropdown menu. The main area has tabs for 'Skills' and 'Connections', with 'Skills' selected. It lists an application named 'Ansible Controller Skills - z skills' which has 2 skills, is connected by 'Team', and is connected by 'andrew@jones-tx.com'. At the bottom, there are pagination controls. On the right, there's a sidebar with user information ('Andrew Jones', 'Region US-SOUTH', 'Plan Essentials'), a 'Settings' link (labeled 'b' with a green box), and other links like 'Provide feedback', 'Privacy', 'About', and 'Log out'.

2. Click the **Skill configurations** tab.

This screenshot shows the 'Settings' page in the IBM Watsonx Orchestrate interface. The 'Skill configurations' tab is active, indicated by a green box. Under the 'Data Retention Policy' section, the 'Active' radio button is selected. A note states: 'The chat history for the users in the tenant are saved for 30 days. After 30 days, the chat history is deleted permanently. Deleting the chat history doesn't affect the connected apps or the added skills.' At the bottom, there are buttons for 'Save' and 'Cancel'.

3. Enter **0** for the **Number of form fields**.

This screenshot shows the 'Skill configurations' page in the IBM Watsonx Orchestrate interface. The 'Number of form fields' input field is highlighted with a green box and contains the value '0'. Below the input field are minus and plus buttons. The rest of the page shows a note: 'Set default for maximum number of fields to consider a skill to be conversational'.

Create actions

1. Click the main menu and select **AI assistant builder**.

2. Hover over the **Home** icon () and click **Actions**.

3. Click **Create action**.

4. Click the **Skill-based action** tile.

5. Select the **z/OS Gather Facts** tile and click **Next**.

Note, it may take a minute for the page to display the action tiles. The date shown in the **z/OS Gather Facts** tile reflects when you added the skill to your application.

Build an action from a skill

Select a skill

Choose a conversational skill published as a foundation of your action.

- On the **New action** dialog, (a) enter a prompt a user of the assistant might use to initiate the action and then (b) click **Save**.

Be careful with the sample phrases you specify.

During the development of the lab guide, it was discovered that some sample phrases with a `/` character can cause issues with the actions. Avoid using **z/OS** in your sample phrases. This issue has been reported to the offering team.

Sample prompts:

Get zOS facts

Gather zOS facts

Customer starts with:
Example: I want to pay my credit card bill.

Add example phrases:

Enter phrases that a customer types or says to start the conversation about a specific topic. These phrases determine the task, problem, or question your customer has.

The more phrases you enter, the better your assistant can recognize what the customer wants.

Enter phrases your customer might use to start this action
Total: 0

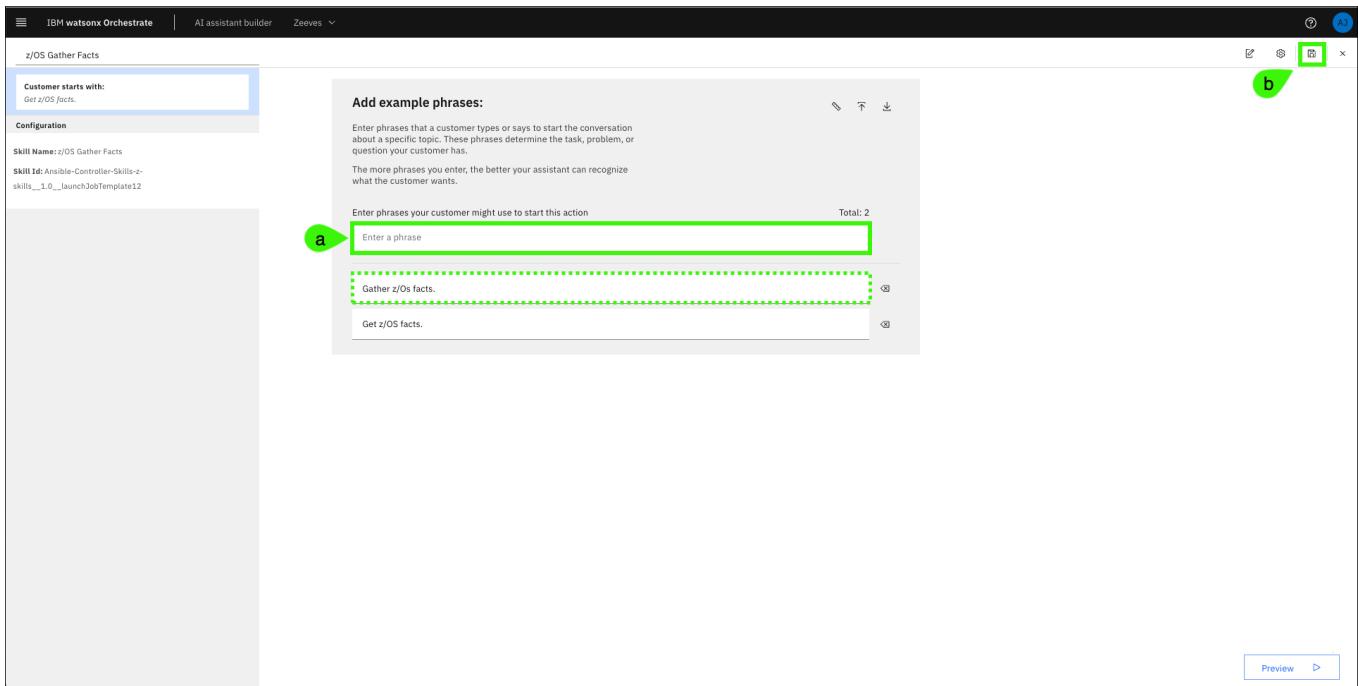

Example: I want to pay my credit card bill.

New action

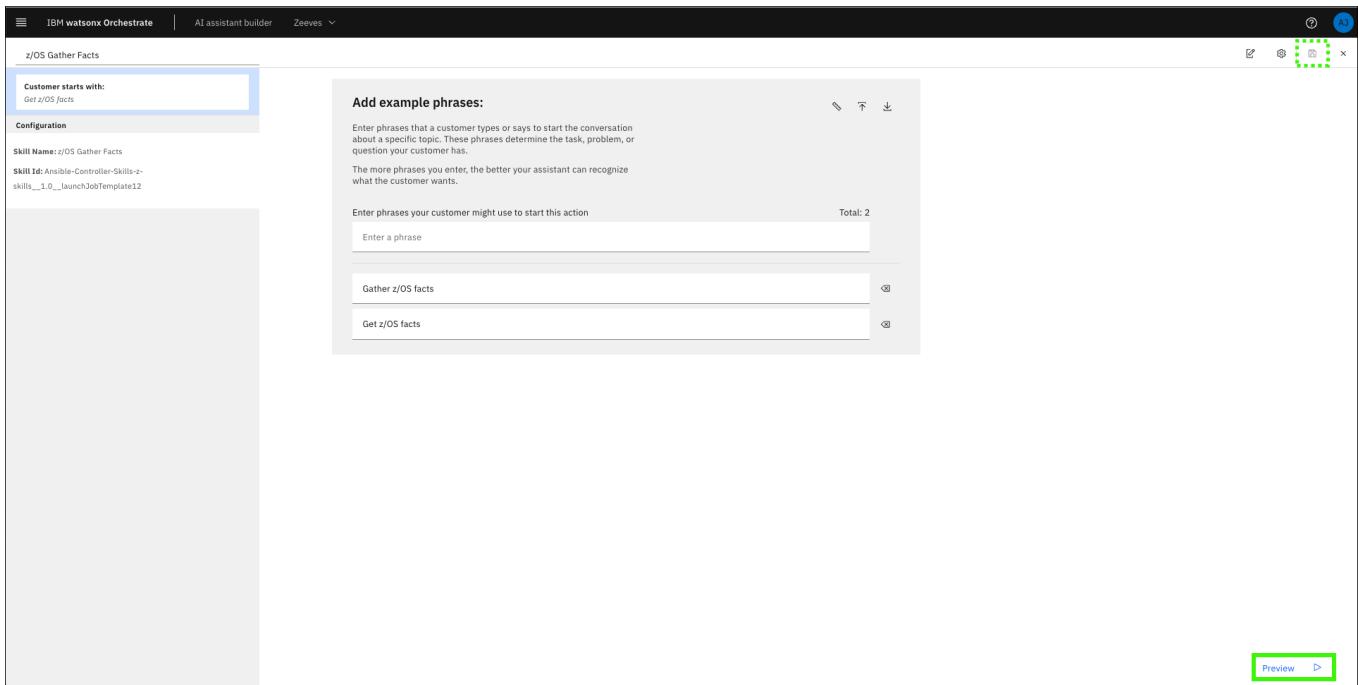

What does your customer say to start this interaction?
Get z/OS facts.

Cancel Save

- Add any (a) additional prompts and then (b) click the save ().

8. Click Preview.

9. Enter one of the prompts you specified in step 9 or 10.

Prompt:

Get zOS facts

Customer starts with:
Get z/OS facts

Add example phrases:

Enter phrases that a customer types or says to start the conversation about a specific topic. These phrases determine the task, problem, or question your customer has.

The more phrases you enter, the better your assistant can recognize what the customer wants.

Enter phrases your customer might use to start this action Total: 2

Enter a phrase

Gather z/OS facts
Get z/OS facts

Preview

12:55 PM
Greet customer [default]
Welcome, how can I assist you?

Get z/OS facts

10. Review the returned results and record the **job** number.

In the execution of this skill-based action, the skill executed properly and the output is the job id.

If an error is generated, review the Troubleshooting section below.

Customer starts with:
Get z/OS facts

Add example phrases:

Enter phrases that a customer types or says to start the conversation about a specific topic. These phrases determine the task, problem, or question your customer has.

The more phrases you enter, the better your assistant can recognize what the customer wants.

status : pending

There are no additional steps for this action. Add a new step or end the action.

Verify the job in the Ansible Automation Platform console

Return to the Ansible Automation Platform (AAP) console and review the job information.

1. Click **Jobs** and then click the **job** number recorded in the previous step for the **z/OS Gather Facts** skill.

The screenshot shows the 'Jobs' page in the Red Hat Ansible Automation Platform. The left sidebar has a 'Jobs' menu item highlighted with a green box. In the main table, a row for '12 - z/OS Gather Facts' is highlighted with a green box. The table columns include Name, Status, Type, Start Time, Finish Time, and Actions.

Name	Status	Type	Start Time	Finish Time	Actions
12 - z/OS Gather Facts	Successful	Playbook Run	12/5/2024, 7:17:32 AM	12/5/2024, 7:17:41 AM	

2. Review both the **Details** and **Output** for the **z/OS Gather Facts** job.

Recall, that in the assistant, the contents shown in the **Output** of the Ansible job were not displayed.

The screenshot shows the 'Output' tab for job '12 - z/OS Gather Facts'. The output content is a playbook task for printing gathered facts about a z/OS host. The output is highlighted with a large green dotted rectangle.

```

25 }
26
27 TASK [Print out all gathered facts about the z/OS host.] **** 07:17:38
28 ok: [zos_host] => {
29     "ansible_facts": {

46         "iotime": "..."
}

```

IBM watsonx Assistant for Z provides utility skills to retrieve the job output. It is also possible to create a skill flow that executes the **z/OS Gather Facts** skill followed by the **Retrieve job output** utility skill in sequence; passing the job id from the first skill to the second, in order to view the output within the assistant. Creating a skill flow is covered in the next section.

Troubleshooting

Skill returns "Sorry, we're having issues generating a response".

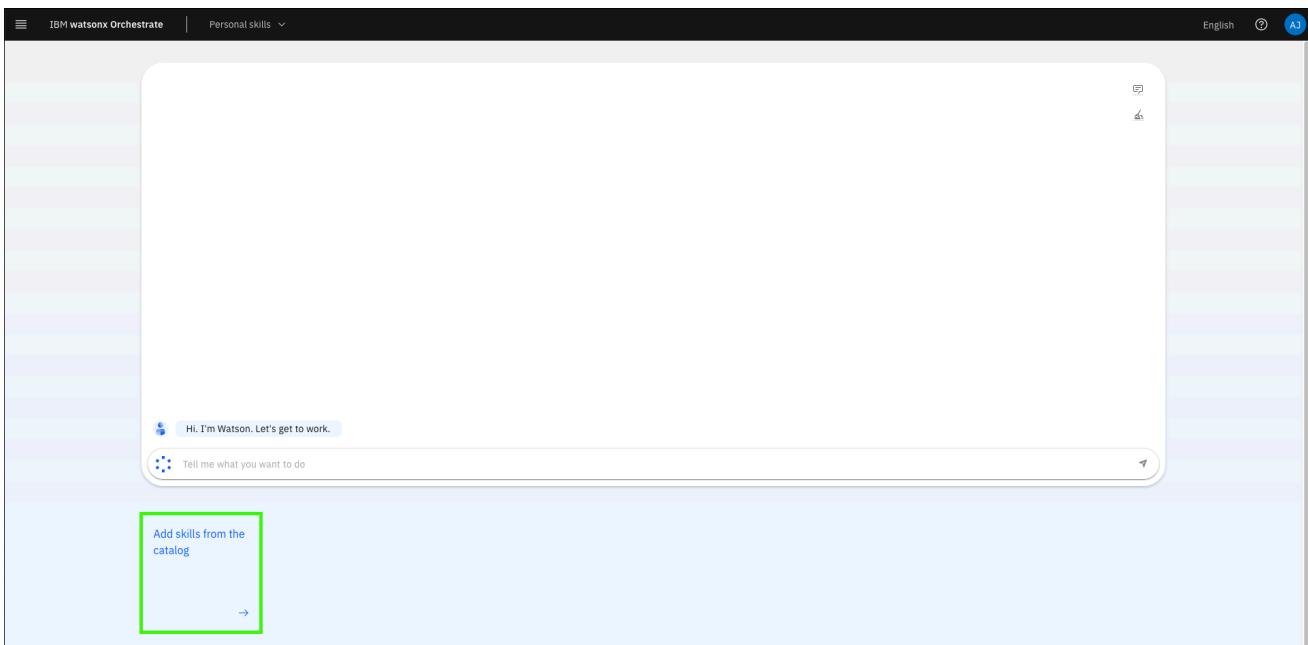

This screenshot shows the configuration of a skill named 'z/OS Gather Facts'. In the 'Customer starts with:' field, the phrase 'Get z/OS facts' is entered. Under 'Add example phrases:', two phrases are listed: 'Gather z/OS facts' and 'Get z/OS facts'. On the right, a preview window shows a sample conversation where the bot responds with 'Sorry, we're having issues generating a response.' This indicates an error in the skill's response generation.

This error appears to be an intermittent issue when a skill is first added. To resolve, add the skill to your personal skills catalog using the steps that follow. If you encounter the issue, try the steps that follow:

1. Expand the main menu and select Chat.

This screenshot shows the main menu expanded, with the 'Chat' option highlighted. Other options visible in the menu include 'Skill sets', 'Skill catalog', 'BUILD', 'AI assistant builder', 'Skill studio', 'ADMINISTER', and 'Access management'. The 'AI assistant builder' section is currently active, showing a configuration page for a skill.

2. Click Add skills from the catalog.

3. Search for the skill app you created earlier and click the tile for your app.

The screenshot shows the 'Skill catalog' page. At the top, it says 'Skills are grouped by app. Select an app to see all the skills that use that app.' Below is a search bar with the text 'z skills'. The main area is titled 'Apps' and shows several skill app tiles arranged in a grid. One tile, 'Ansible Controller Skills - z skills', is highlighted with a green box.

4. Click Add skill for all the skills you want to add.

The screenshot shows the details for the 'Ansible Controller Skills - z skills' app. It lists two skills: 'z/OS Gather Facts' and 'z/OS Ping'. Each skill card has an 'Add skill +' button at the bottom, which is highlighted with a green box.

5. Click Connect app.

z/OS Ping
z skills - This playbook pings the z/OS host to test connectivity.

Connected

8. Try one of the prompts you created for your skill.

Prompt:

Gather zOS facts

The screenshot shows the IBM Watsonx Assistant interface. At the top, it says "IBM Watsonx Orchestrate" and "Personal skills". On the right, there are icons for English, a refresh symbol, and a blue "A3" button. The main area has a light gray background. A message from Watson says: "Hi, I'm Watson. Check out the skills in the catalog to see how I can help you." Below this, a green button labeled "Gather z/OS facts" is highlighted. A green dashed box encloses the results of this skill: "Here are the results of the z/OS Gather Facts skill." It shows a card for "z/OS Gather Facts" with status "pending" and a progress bar indicating 12% completion. To the left, a blue box contains the text "Add skills from the catalog" with an arrow pointing right. To the right, another green dashed box encloses the "Ansible Controller Skills - z skills" catalog, which shows 2 skills.

You should now be able to run the skill through the assistant preview.

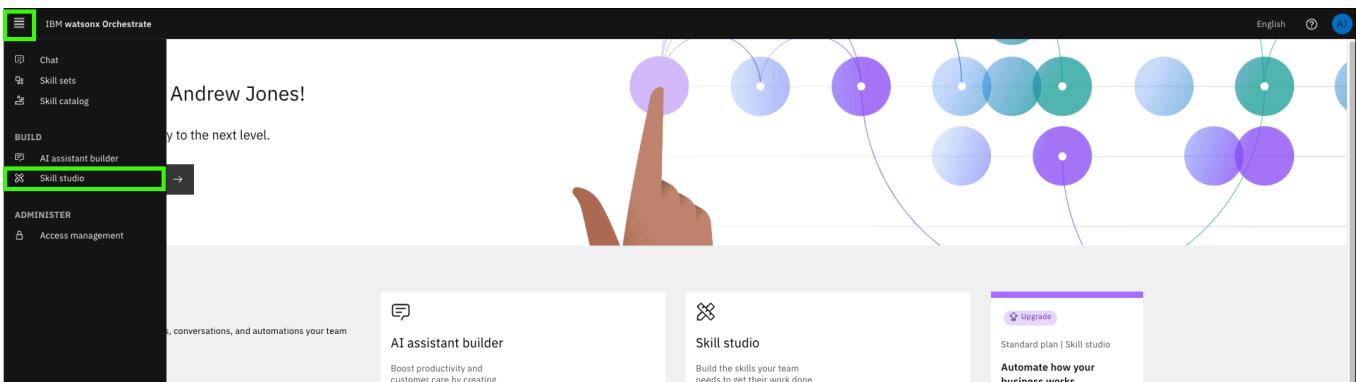

Creating skill flows

As seen in the previous section, running the Ansible skill to **Gather z/OS facts**, the skill executed successfully and was verified within the Ansible Automation Platform (AAP) console by viewing the job output. However, the output wasn't displayed by the assistant. To enable this scenario, a skill flow is needed. Skills are often more valuable when combined with other skills. You can create a skill flow to use two or more skills together to finish a task (like returning the output of a previous skill). When you create a skill flow, you map the output of one skill as the input for subsequent skills. Learn more about creating skill flows [here](#).

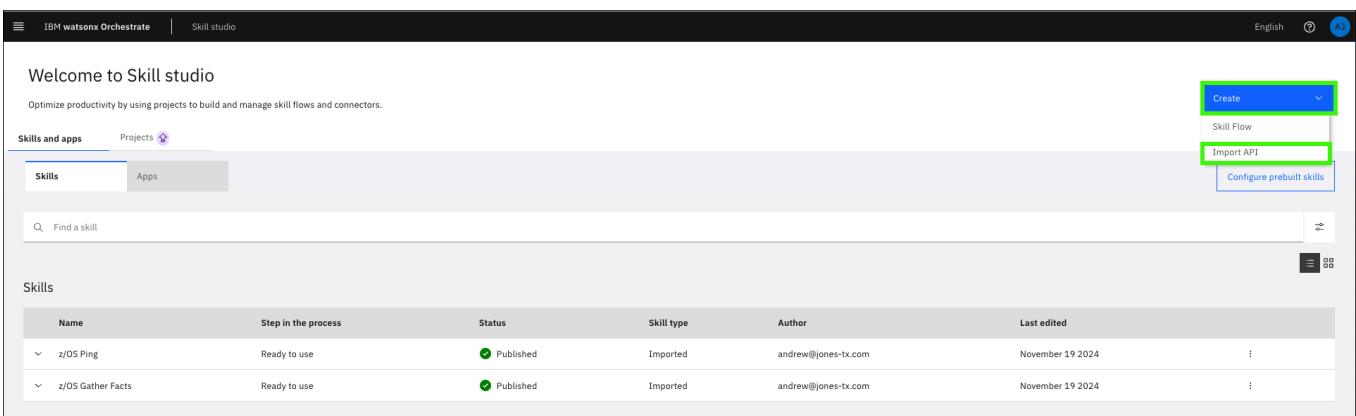

As mentioned in a previous section, there are some default utility skills that are provided out of the box with the "Z Skills Accelerator" which are leveraged to return the output of a skill. To accomplish this, we will import the Ansible Utility skill called **Retrieve job output**.

Add the utility skill

1. Open IBM watsonx Orchestrate **Skill studio**.

2. Expand **Create** and click **Import API**.

3. Click the **z/OS Skills accelerator (Trial)** tile.

4. Enter the following values in the **z/OS Skills accelerator** form and then click **Connect**.

Use the **URL**, **User Name**, and **Password** values recorded in the **Explore Ansible Automation Platform** section earlier.

a: Connection Type: `ansible`

b: Application Name: <use the same application name as in previous section>

c: Connection URL: <enter the URL for your AAP UI>

d: User Name: <enter the AAP User Name (for UI access)>

e: Password: <enter the AAP User Password>

f: Search Pattern: `*`

5. Expand **Ansible Utility Skills** and click **Ansible Utility Skills**.

Add skills

Choose how you want to add skills and then select the skills you want to refer to from that source.

- Expand the **Create** drop-down menu and click on **Skill flow**.

3. Click the + icon.

Next, you need to add the [z/OS Gather Facts](#) skill and the [Retrieve job output](#) skill to the skill flow. Use the **Search apps** function to locate the skills.

4. Search for the application name you specified earlier and click its tile.

5. Click **Add Skill** in the [z/OS Gather Facts](#) tile.

6. Verify the **z/OS Gather Facts** skill is added to the skill flow.

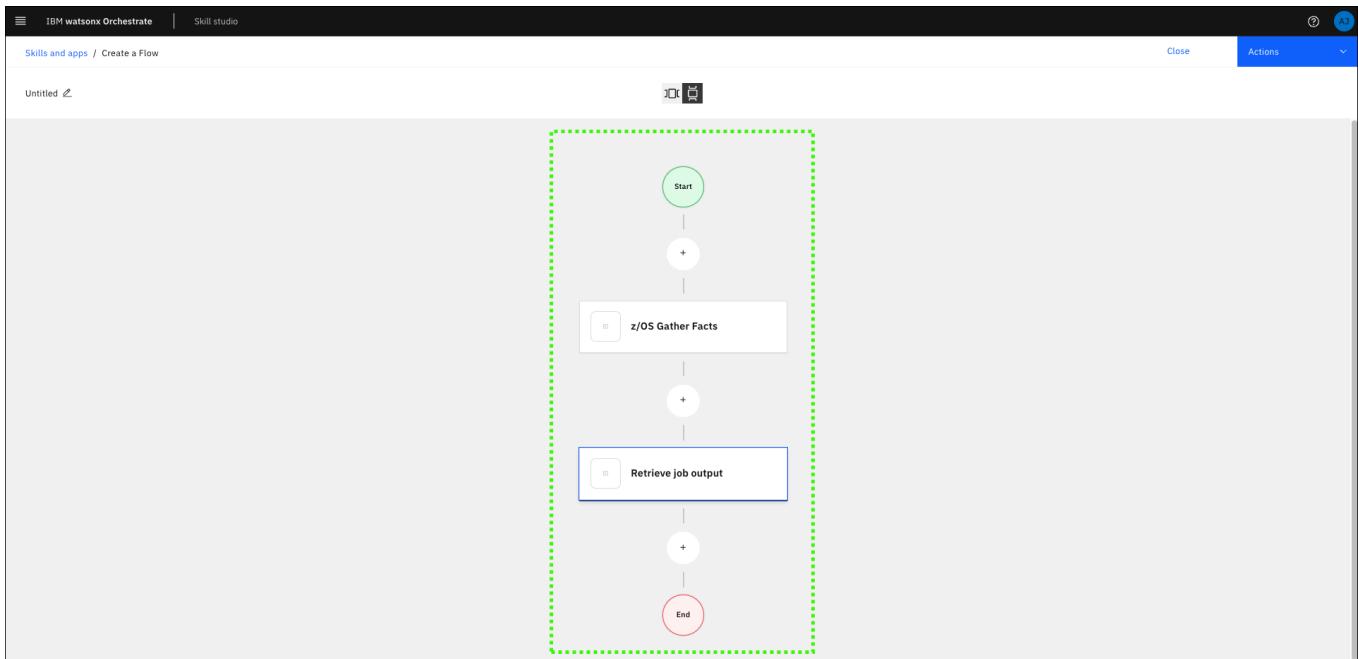

7. Click the + icon after the **z/OS Gather Facts** tile.

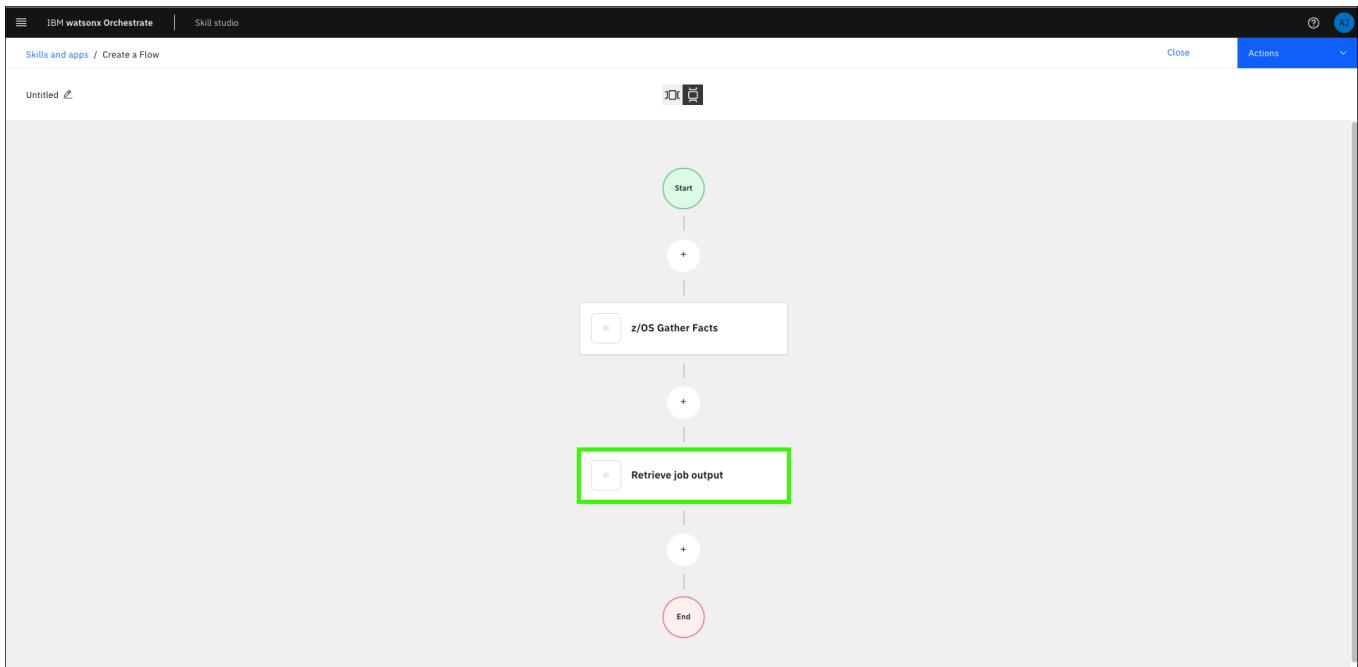

8. Repeat steps 5 and 6 for the **Retrieve job output** skill.

After adding the **Retrieve job output** skill, your skill flow should look like:

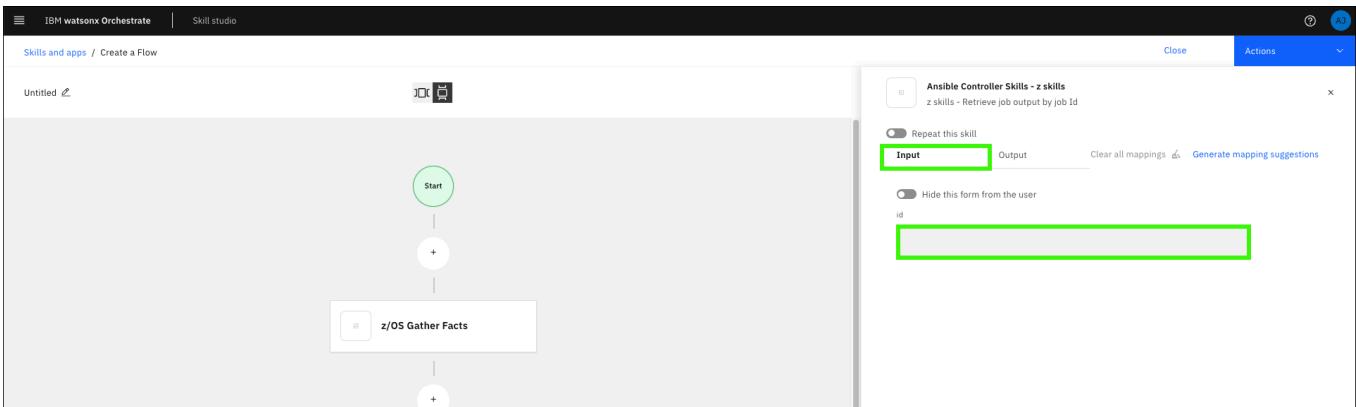

Next you must map the output values of the first skill to the input of the second skill. In this case, pass the “job id” output from **z/OS Gather Facts** as an input for **Retrieve job output**.

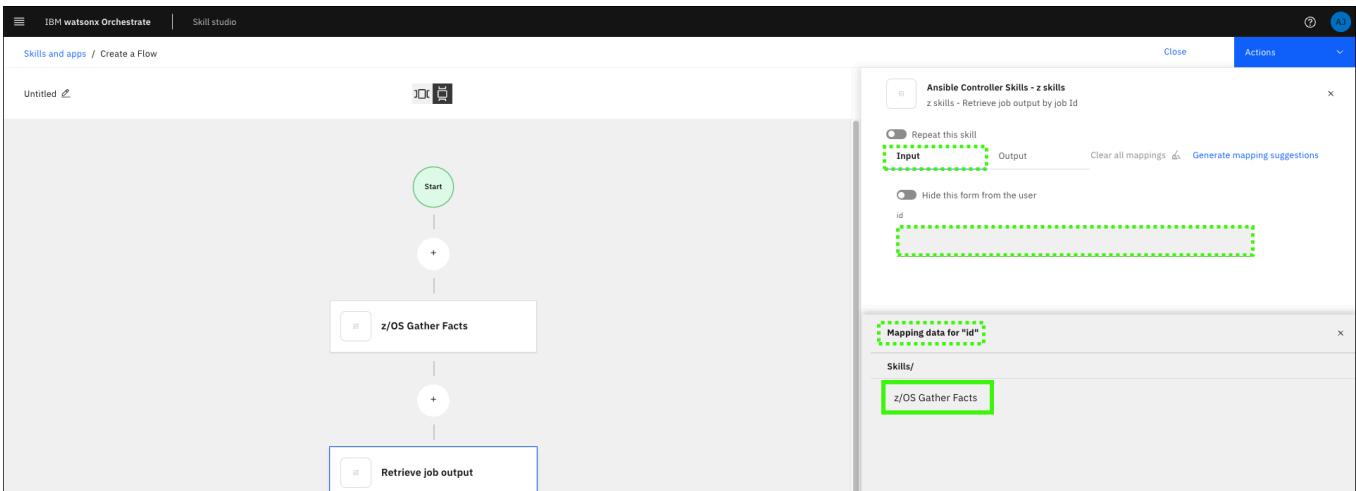

9. Click the **Retrieve job output** tile.

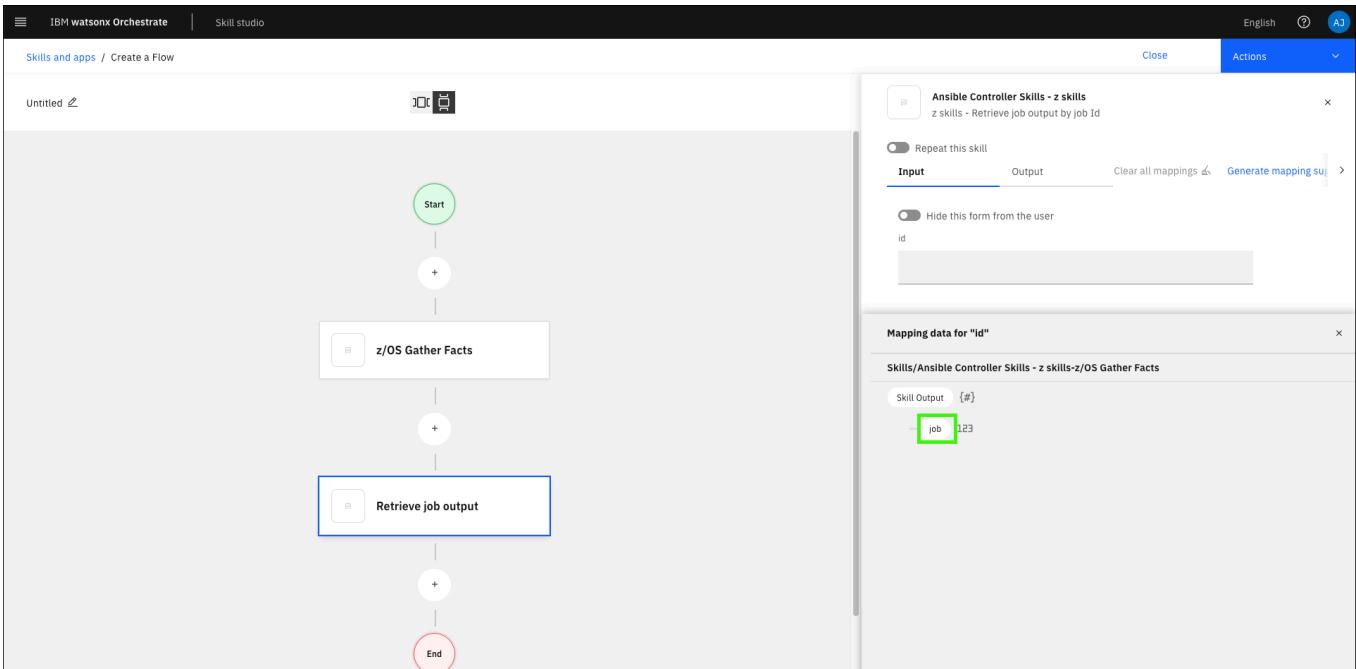

10. Select the **Input** tab and click in the **id** field.

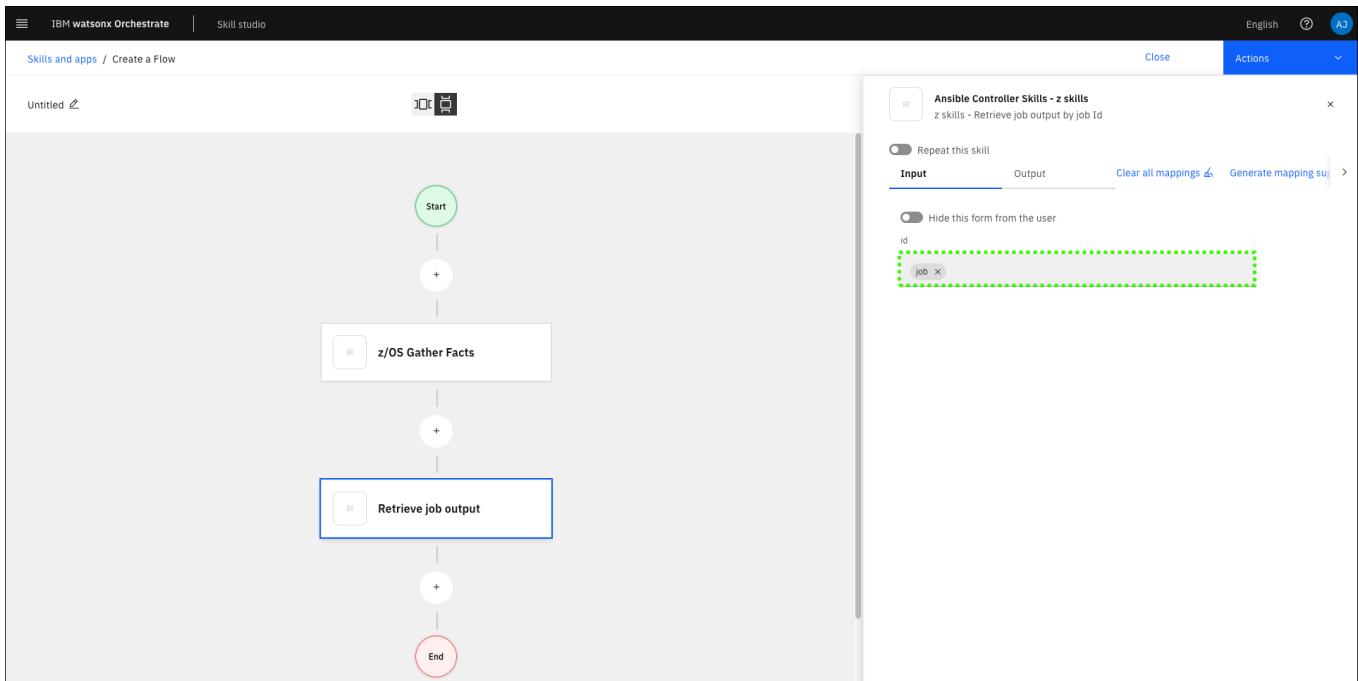

11. Click the **z/OS Gather Facts** skill in the **Mapping data for "id"** section.

12. Click the **job** icon.

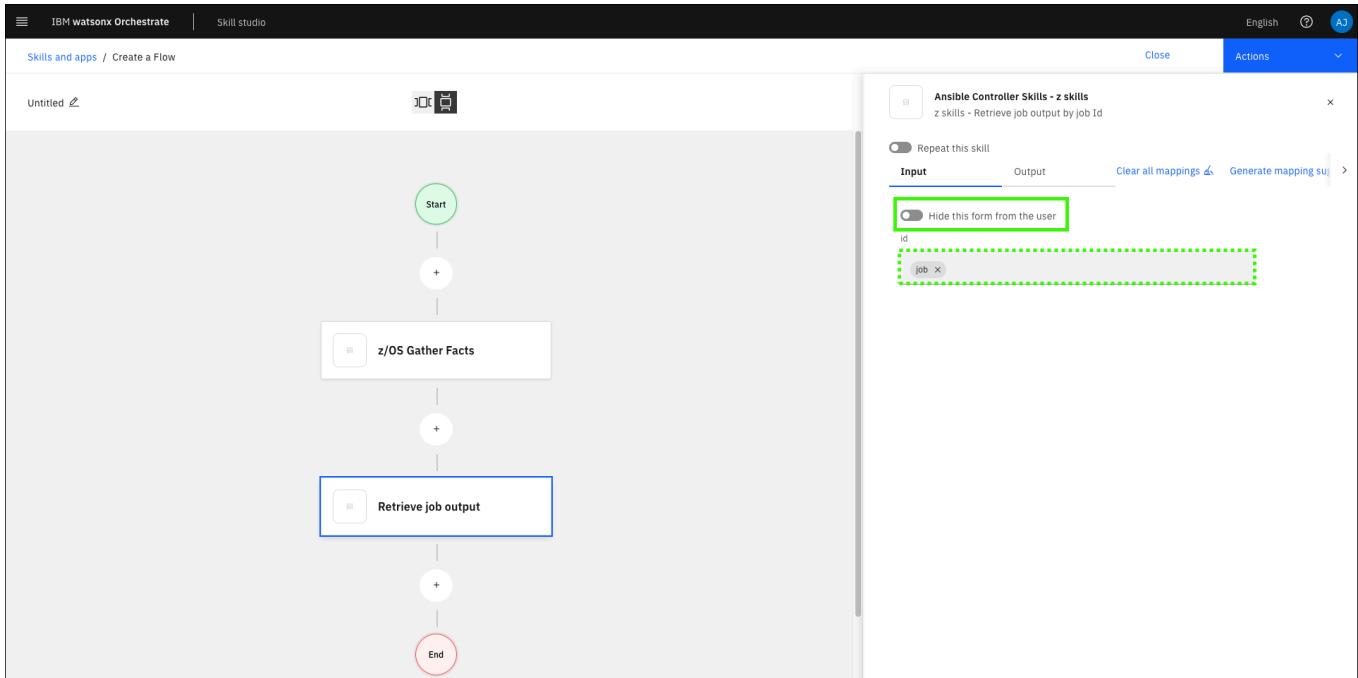

13. Verify the **job** appears in the **id** field.

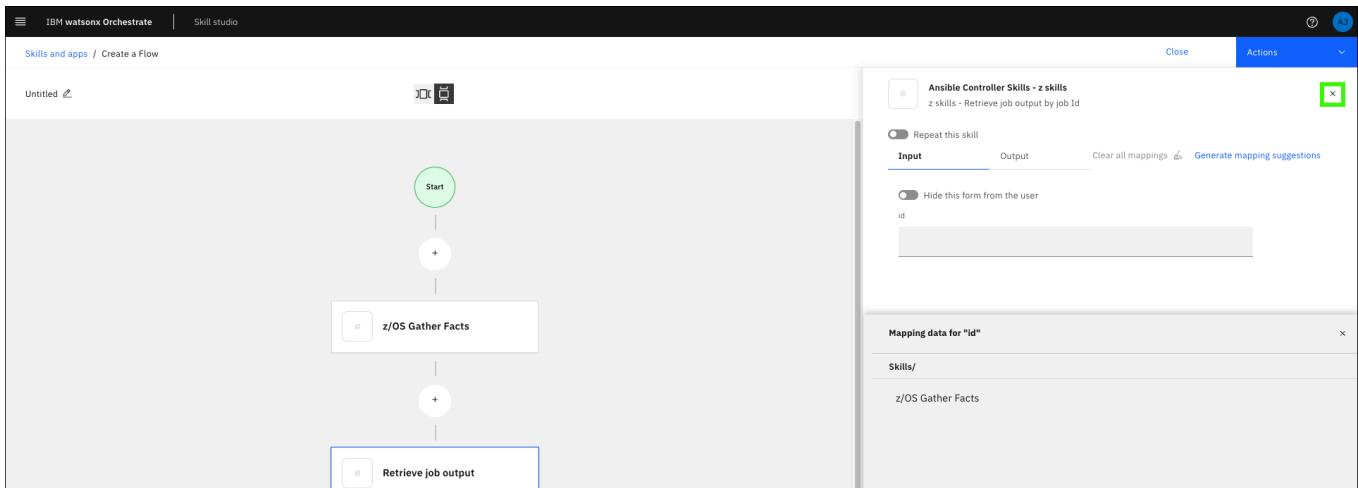

14. Optionally, toggle the **Hide this from the user** setting.

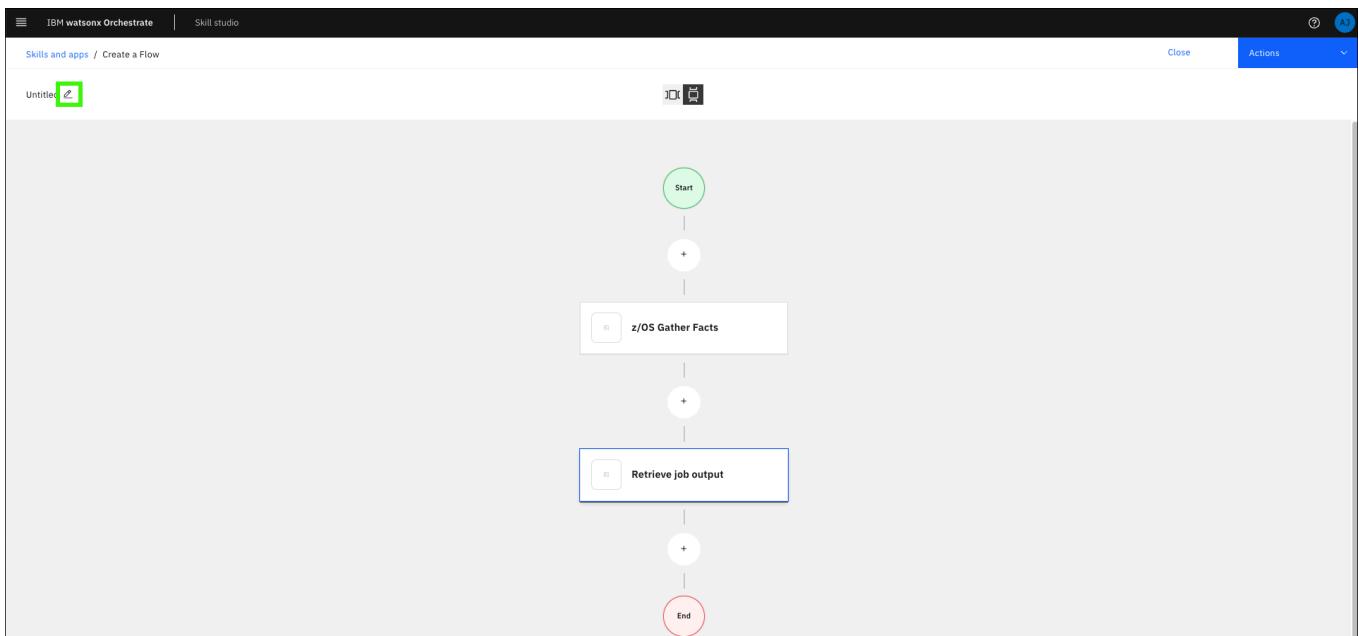

For this lab guide, this option is left disabled. Learn more about this option [here](#).

15. Click the x to close mapping window.

16. Click the pencil (✍).

17. Enter a (a) Name and (b) Description for your skill flow and then (c) click Save.

18. Expand the **Actions** pull-down list and click **Save as draft**.

19. Expand the **Actions** pull-down list and click **Enhance**.

On the **Enhancing the skill** pages, you can:

- modify the skill name, description, and version
- add phrases (prompts) that will be recognized by the assistant to call the skill flow

20. Click the **Phrases** tab.

21. Replace the existing **phrases** (prompts) and then click **Publish**.

Notice the default prompts are either not very intuitive (the skill flow name) or a bit verbose. Replace the existing phrases with phrases that you anticipate users will enter.

Be careful with the sample phrases you specify.

During the development of the lab guide, it was discovered that some sample phrases with a `/` character can cause issues with the actions. Avoid using `z/OS` in your sample phrases. This issue has been reported to the offering team.

Example prompts:

Show me zOS facts

Gather and display zOS facts

Name **Phrases** Next best skills

Phrases are the text your user types in the chat bar to find and use a skill.

Show me zOS facts

Gather and display zOS facts

Enter new train phrase

Cancel **Publish** Save as draft

Enable the skill flow in your assistant

1. Click **AI assistant builder** in the main menu.

Chat
Skill sets

6. Enter an example prompt for the skill and click **Save**.

You can use one of the prompts you used earlier for the skill flow.

Show me zOS facts

Customer starts with:
Example: I want to pay my credit card bill.

Add example phrases:
Enter phrases that a customer types or says to start the conversation about a specific topic. These phrases determine the task, problem, or question your customer has.
The more phrases you enter, the better your assistant can recognize what the customer wants.

Enter phrases your customer might use to start this action Total: 0
Example: I want to pay my credit card bill.

New action
What does your customer say to start this interaction?

Cancel Save

7. Enter any additional phrases (prompts) and then click the **save** (💾).

Customer starts with:
Show me zOS facts

Add example phrases:
Enter phrases that a customer types or says to start the conversation about a specific topic. These phrases determine the task, problem, or question your customer has.
The more phrases you enter, the better your assistant can recognize what the customer wants.

Enter phrases your customer might use to start this action Total: 1
Enter a phrase
Show me zOS facts

8. Click close (x).

9. Select the original skill you created (a) (not the skill flow you just created), click the ellipses (b), and then click Delete (c).

10. Wait for system training to complete.

Note: The message will change to "System is trained" and then disappear.

11. Click **Preview**.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with 'Actions' expanded, showing categories like 'All items', 'Created by you', 'Variables', and 'Saved responses'. In the main area, a table lists one item: 'Zeeves-gather-facts-flow'. The table columns include 'Name', 'Last edited', 'Examples count', 'Steps count', and 'Status'. The status is green with a checkmark. At the bottom right of the main area, there's a 'Preview' button, which is highlighted with a green box.

12. Enter one of the prompts you specified into the assistant preview.

The screenshot shows the IBM Watsonx Orchestrate interface with the preview window open. In the preview window, there's a text input field containing the message 'Show me zOS facts'. Below the input field, a conversation log shows a message from 'Greet customer [default]': 'Welcome, how can I assist you?'. The user's message 'Show me zOS facts' is shown below it. The user's message is highlighted with a green box. The preview window also shows a status bar at the bottom with 'You 8:13 AM'.

13. Wait 10 seconds and then click **Apply**.

Note: It is important to wait for the first job to complete before submitting the second job in the flow.

The screenshot shows the IBM Watsonx Orchestrator interface. On the left, there's a sidebar with 'Actions' selected. Under 'Created by you', there's a list item 'Zeeves-gather-facts-flow'. The main area shows a table with one item selected. The table columns are Name, Last edited, Examples count, Steps count, and Status. The status is green with a checkmark. Below the table, there's a preview window showing a conversation between a user and a bot. The user says 'Greet customer [default]' at 7:54 AM. The bot responds with 'Welcome, how can I assist you?' at 8:13 AM. The user then says 'Show me zOS facts' at 8:13 AM. The bot responds with 'Zeeves-gather-facts-flow' at 8:13 AM. The preview window has scroll bars.

14. Review the results from the skill flow.

Use both scroll bars in the assistant preview to review all of the returned information. The output should be similar to what was seen in the AAP web console. The character strings like [0;32m are special characters that are not properly displayed in the assistant preview interface.

This screenshot is similar to the previous one, showing the 'Zeeves-gather-facts-flow' skill. The preview window now displays the raw JSON output of the skill's steps. The output includes various parameters and their values, such as 'ipl_volume', 'load_param_device_id', 'load_param_dsn', 'operator_prompt_flag', etc. A green dashed box highlights the first few lines of this JSON output. The preview window has scroll bars.

Sample output from the Z/OS gather facts flow.

```

The scenario shown above may or may not be relevant for your client's use case. It is intended to show you how to sequence skills together in a skill flow to create an action that your assistant triggers based on prompts using the pre-configured Ansible automation templates. You are encouraged to create your own skill flows and prompts using other skills available within the AAP instance.

Next, learn about custom-built actions.

Creating custom-built actions

To this point, you have learned how to:

- import skills into Watson Assistant Orchestrate
- add applications with those skills to your assistant
- create skill-based actions for your assistant
- combine skills in a skill flow

There is also the ability to create **custom-built** actions. Custom-built actions allow you to create new actions with different steps to take in conversations and form sequences of prompts that define the conversation experience. The steps can be defined with or without conditions, which help control the custom responses. Steps within the custom action can end with routing to conversational search, triggering another existing sub-action, and other actions. This is a powerful way of customizing the end-user's experience.

Learn more about creating custom-built actions [here](#).

Importing pre-packaged z/OS skills

Provided with Version 2 of watsonx Assistant for Z is a set of pre-packaged skills which can be used to automate various tasks on z/OS, such as running different console commands and retrieving logs from batch jobs.

The list of pre-packaged skills available include:

- Authorized program list
- z/OS IPL Information
- Display zOS parmlib datasets
- Unix System services options
- Display zOS subsystems
- List spool files
- Retrieve dataset content
- Retrieve spool file content
- Retrieve z/OS Management Facility (OSMF) job status

IBM watsonx Orchestrate requires that any OSMF environment you connect to for skill execution has certificate authority (CA) signed certificates. In the case of the Ansible Automation Platform (AAP) & Wazi z/OS environment provisioned in IBM Technology Zone (ITZ), the z/OS system is not currently using CA signed certificates and therefore cannot execute the pre-packaged skills on your own z/OS system. For demo purposes, it is still recommended to import them so that the pre-packaged skills can be shown.

Work is in progress to modify the ITZ environments so that they are enabled for skill execution using these pre-packaged skills. In the meantime, the underlying automation for these pre-packaged skills can still be demonstrated using the Ansible skill 'z/OS Operator Command' which is available to import. This works because the pre-packaged skills are executing console commands directly using OSMF APIs which can also be run using the Ansible template skill 'z/OS Operator command'. For example, here are the console commands being used in some of the pre-packaged skills:

- Authorized Program list – `operator command -> d prog,lnklist`
- z/OS IPL Information - `operator command -> d iplinfo`
- Display zOS parmlib datasets - `operator command -> d parmlib`

You can import the pre-packaged skills into your sandbox environment by downloading the .zip file from [here](#) and following [these instructions](#).

You must extract the imbedded JSON file and modify the file for your environment by following [these instructions](#).

Publishing and deploying your assistant

To this point, acting as an Assistant Builder, you have built out the assistant, configured conversational search, and added skills and automations. While doing so, you have been testing your assistant using the **preview** capability of AI Assistant Builder. The **preview** capability is a closed environment for experimenting with prompts.

After your assistant is finalized, you can publish it to make it available to end-users. Each assistant you create comes with two **environments**: *draft* and *live*. You have been configuring your assistant in the draft environment. Each environment has its own set of IDs, URLs, and service credentials that can be referenced by external services.

The **Environments** page in the AI assistant builder has tabs for managing both the **Draft environment** and the **Live environment**:

This screenshot shows the 'Environments' page in the AI assistant builder. The 'Draft' tab is selected, indicated by a green dashed border. The 'Live' tab is also present. On the left, there's a sidebar with icons for environments, channels, and integrations. The main area is divided into sections: 'Draft environment' (with a description of it being for internal preview), 'Channels' (listing 'Web chat'), 'Resolution Methods' (showing 'Draft content' with a last edit timestamp and a 'Draft' status), and 'Extensions' (listing 'Search'). A 'Preview this environment' button is located in the top right corner.

This screenshot shows the 'Environments' page in the AI assistant builder. The 'Live' tab is selected, indicated by a green dashed border. The 'Draft' tab is also present. The layout is identical to the Draft environment page, with sections for 'Live environment' (description of deployment to customers), 'Channels' (listing 'Web chat'), 'Resolution Methods' (showing 'Content' with a note about no published version), and 'Extensions' (listing 'Search'). A 'Publish version' button is located in the top right corner of the Content section.

The **Draft environment** contains all your in-progress work in the Actions, Preview, and Publish pages. Use the **Draft environment** tab to build out your assistant and use for internal testing before deployment. Any integrations you use (i.e. channels) for the **Draft environment** are unique to that environment, and changes to draft integrations don't affect the **Live environment**.

Publish the assistant

Each time that you publish, you're creating a new version of the assistant, for example V1. When you publish your content, you're creating a snapshot of the draft content, resulting in a version.

Versions do not contain integration configurations or environment settings

Published versions contain all of the content from actions, including settings and variables. **However, versions do not contain integration configurations or environment settings.** Integration configurations and environment settings must be configured manually in each environment.

For managing quality-control and versioning, the Live environment is the version of the assistant you should be giving access to the end-user.

Follow these steps to publish the first version of your assistant using Assistant Builder:

1. Hover over the **Home** icon () and click **Publish**.

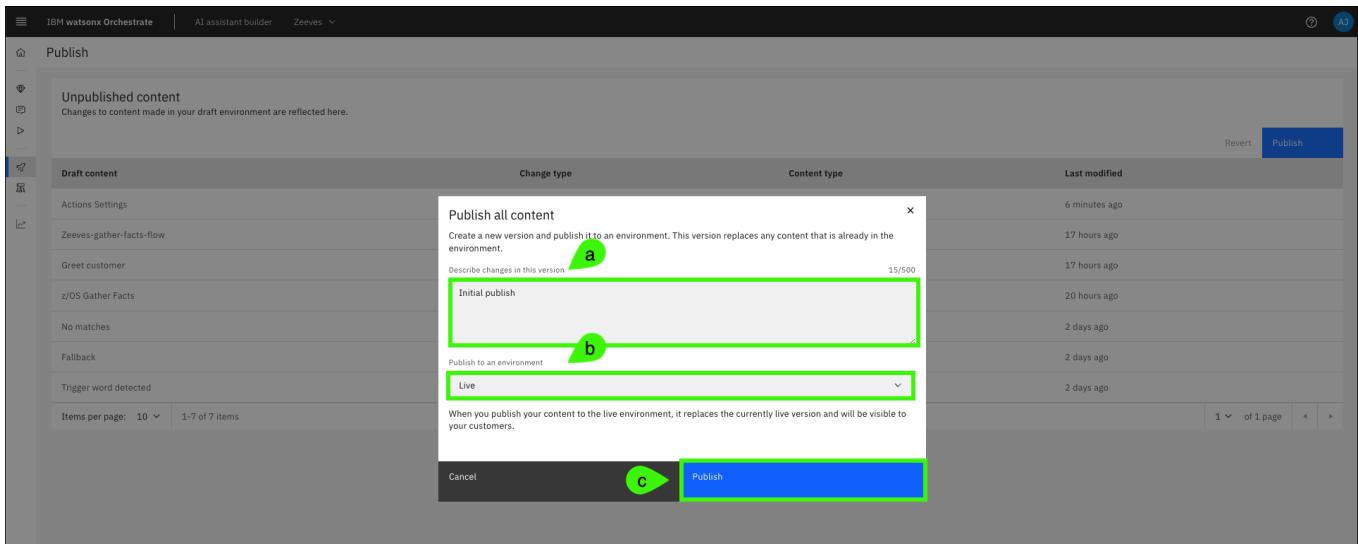

The screenshot shows the IBM Watsonx Orchestrate interface with the 'AI assistant builder' tab selected. On the left, there's a sidebar with 'Home' (highlighted with a green box), 'Generative AI', 'Actions', 'Preview', and 'Deploy'. Under 'Deploy', 'Publish' is also highlighted with a green box. The main area shows a flowchart with several nodes: 'Build actions', 'Customize your greeting', 'Create a fallback plan', 'Preview & debug', 'Customize web chat', 'Set up a channel', 'Set up live agent', and 'Public assist'. Below the flowchart, there's a note about 'Unpublished content' and a table showing 'Draft content' changes. At the bottom right, there's a 'Publish' button.

2. Click **Publish**.

The screenshot shows the 'Publish' step in the AI assistant builder. It displays a table of 'Draft content' changes. The 'Change type' column shows 'Updated' for most items, except for 'Actions Settings' which is 'Settings'. The 'Content type' column shows 'Actions' for most items, except for 'Actions Settings' which is 'Settings'. The 'Last modified' column shows times ranging from '30 minutes ago' to '2 hours ago'. At the bottom right, there's a 'Publish' button.

Draft content	Change type	Content type	Last modified
Zeeves-gather-facts-flow	Updated	Actions	30 minutes ago
Greet customer	Updated	Actions	31 minutes ago
Actions Settings	Updated	Settings	2 hours ago
Fallback	Updated	Actions	2 hours ago
No matches	Updated	Actions	2 hours ago
Trigger word detected	Updated	Actions	2 hours ago

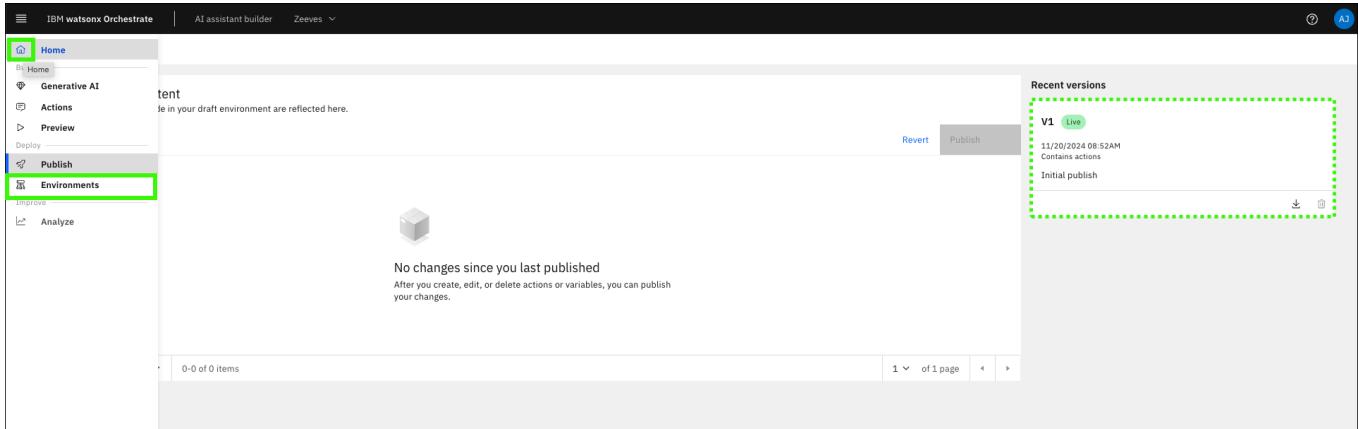

3. Enter a description of the changes (a), set the environment to **Live** (b), and then click **Publish** (c).

Configure the live environment

Important: When the live environment is created, the environment settings from the draft environment are not carried over (for example the configuration of the OpenSearch instance used for conversational search).

1. Hover over the **Home** icon (🏡) and click **Environments**.

2. Click **Live**.

3. Click Web chat.

The screenshot shows the IBM Watsonx Orchestrate interface. At the top, there are tabs for 'IBM Watsonx Orchestrate', 'AI assistant builder', and 'Zeeves'. Below the tabs, there's a navigation bar with icons for environments, draft, live, and other settings. The main area is titled 'Environments' and shows two tabs: 'Draft' and 'Live'. Under 'Live', there's a section for 'Live environment' which describes it as a deployment to customers. Below this is a 'Channels' section where 'Web chat' is listed and highlighted with a green box. There's also a 'Browse catalog' link. To the right, there are sections for 'Resolution Methods', 'Content' (version V1, 11/20/2024 08:52AM, status Live), and 'Extensions' (Search). A large blue arrow points from the 'Web chat' entry in the 'Channels' list towards the 'Content' section.

4. Customize the live assistant as you see fit.

On the **Style** tab, you're able to set the Assistant name which will be displayed at the top of the chat window when end-users are interacting with the assistant. For pilots or demos, you may want to personalize this name for the client. Also in the **Style** tab, you have the ability set the themes and display settings of the chat windows, including the ability to enable the IBM Watermark and enable streaming (recommended).

On the **Home** tab, you enable and customize a default greeting message from the assistant when the user accesses the assistant chat. You're also able to set Conversation starters that will be displayed in the chat window. When selected by the end-user, the text of these conversation starters are sent as prompts, so it is important that your assistant is trained and tested to answer appropriately. It is highly recommended to remove these default conversation starters and to consider creating your own as long as they're able to be executed as actions and provide value to the end-user. At the bottom of the Home screen tab, you will also see the ability to add a Background style for the assistant chat window.

Explore all the other tabs.

Customize your live environment.

For this lab, toggle **Streaming** on and turn **Suggestions** off on the **Suggestions** tab. You may also want to change the theme to **Dark** to differentiate your draft and live environments.

Connect the skills to the live environment

1. Click **Skill sets** in the main menu.

The screenshot shows the IBM Watsonx Orchestrate interface. The left sidebar has sections: Chat, Skill sets (highlighted with a green border), Skill catalog, BUILD (AI assistant builder, Skill studio), and ADMINISTER (Access management). The main area displays 'Resolution Methods' with 'Content' (V1, 12/04/2024 03:22PM, Live) and 'Extensions' (Search). A central icon is a blue speech bubble with three dots.

2. Select your assistant's live instance in the **Skill sets** list.

The screenshot shows the 'Team Skills' page. The 'Skill sets' section lists 'Team Skills' (highlighted with a green border), 'Orchestrator Agent Skillset', 'Team Skills', 'Zeeves draft', and 'Zeeves live'. Below this, there's a 'Name' section with a placeholder 'No skills' and a 'Manage skills' button. A note says 'Click Manage skills to give this team digest specific abilities.'

3. Click **Connections**.

The screenshot shows the 'Zeeves live' skill set page. The 'Skills' tab is selected (highlighted with a green border), while 'Connections' is also present. Below, it says 'Skills (3)' and lists 'z/OS Gather Facts', 'Zeeves-gather-facts-flow', and 'Retrieve job output'. At the bottom, there are pagination controls: 'Items per page: 10' and '1-3 of 3 items'.

4. Search for the application name you specified earlier.

Connect to Ansible Controller Skills - z skills

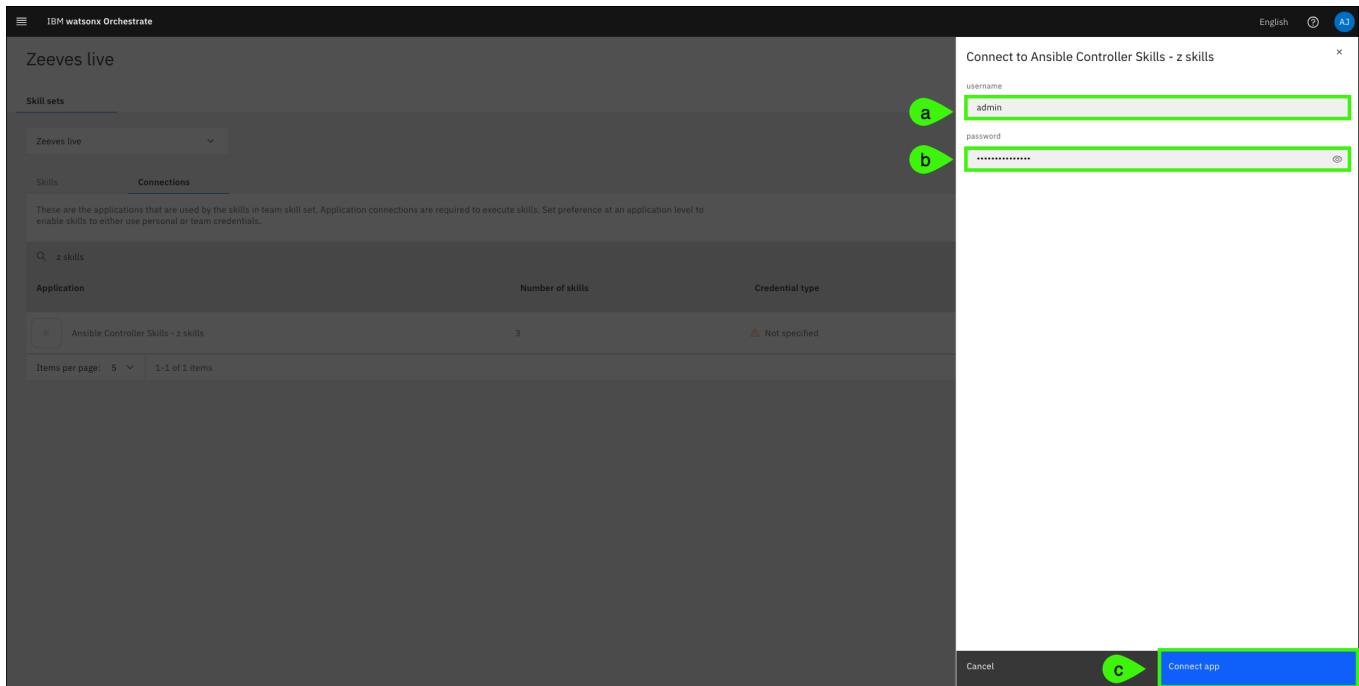

Member credentials
Each team member uses their own credentials to connect to this app and use its skills.

Team credentials
The admin sets the credentials each team member uses to connect to this app and use its skills.

You selected **Team credentials** for the credential type. Click **Connect app** to provide the credentials your team will use and to connect to the app.

Connect app

7. Enter the **username (a)** and **password (b)** using the username (`admin`) and password for your IBM Technology Zone (ITZ) watsonx Assistant for Z Pilot - AAP & z/OS reservation, and then click **Connect app (c)**.

Learn more about publishing your assistant and creating live environments [here](#).

Deploy the assistant

After configuring your assistant's settings and publishing, the final step is to deploy your assistant which can be done across various channels depending on the use case.

There are several options for deploying your assistant through channels and integrations to satisfy the use cases that you might address. Learn more about all the deployment options [here](#).

For this lab, you will deploy the assistant using the web chat integration. The web chat integration provides an assistant interface that can integrate with your website. There is a lot of flexibility with how you may want to integrate it. Learn more about the web chat integration [here](#).

1. Open the **Environments** page in [AI assistant builder](#).
2. Click **Web chat** for the **Live** environment.

The screenshot shows the IBM Watsonx Orchestrate interface. At the top, there are tabs for 'Environments' (Draft and Live), 'AI assistant builder', and 'Zeeves'. In the main area, under 'Live environment', it says 'Use the live environment for deployment to customers. It contains your published content and channel integrations where customers interact with your assistant.' Below this, under 'Channels', 'Web chat' is selected (indicated by a green border). To the right, there are sections for 'Resolution Methods' (Content and Extensions), 'Switch version' (V1, Live), and 'Search'.

3. Click the **Embed** tab.

The screenshot shows the 'Web chat' configuration page. The 'Style' tab is selected. On the right, there's a preview window titled 'Zeeves 1.0' showing a dark-themed web chat interface with an owl avatar and sample messages. The 'Embed' tab is highlighted with a green border. Other tabs include 'Launcher', 'Home screen', 'Live agent', 'Suggestions', 'Security', 'Resources', and 'Save and exit'.

4. Copy and record the `integrationID`, `region`, and `serviceInstanceId` values.

The screenshot shows the 'Web chat' configuration page with the 'Embed' tab selected. The 'Style' tab is also visible. The main area displays a script block with several variables highlighted with green boxes:

```

<script>
  const integrationID = "5e6d2994e6b0-434c-8e8c-275d409272f8"; // The ID of this integration.
  const region = "us-south"; // The region your integration is deployed in.
  const serviceInstanceId = "21c13381-8d8f-474b-bdd3-219f5232087bc"; // The ID of your service instance.
  const loadScript = (instance) => { await instance.loadScript(); };
  setTimeout(function() {
    const t=document.createElement('script');
    t.src='https://web-chat.global.assistant.watson.appdomain.cloud/versions/' + (window.watsonAssistantChatOp...
  });
</script>

```

5. Click the link below to download a sample web chat hyper text markup language (HTML) page.

Watson Assistant Chat.html

```

<html lang="en">
<head>
<title>Watson Assistant Chat</title>
<meta name="viewport" content="width=device-width, initial-scale=1">

<style>
.WebChatContainer {
  position: absolute;
  left: 0;
  right: 0;
  top: 0;
  bottom: 0;
}
</style>
</head>
<body>

<div class="WebChatContainer">

<script>
const element = document.querySelector('WebChatContainer');

window.watsonAssistantChatOptions = {
  integrationID: "<YOUR INTEGRATION ID>", // The ID of this integration.
  region: "<YOUR REGION>", // The region your integration is hosted in.
  serviceInstanceId: "<YOUR SERVICE INSTANCE ID>", // The ID of your service instance.
  element,
  openChatByDefault: true,
  hideCloseButton: true,
  layout: {
    showFrame: false,
    hasContentMaxWidth: true,
  },
  onLoad: async (instance) => {
    window.WACInstance = instance;
    await instance.render();
  }
};

```

6. In a text editor, open the `Watson Assistant Chat.html` file and insert the values for your assistant you copied in step 3.

```

 30      hideCloseButton: true,
 31
 32      layout: {
 33        showFrame: false,
 34        hasContentMaxWidth: true,
 35      },
 36
 37      onLoad: async (instance) => {
 38        window.WACInstance = instance;
 39        await instance.render();
 40      }
  
```

8. Open the Watson Assistant Chat.html file in a web browser.

Your assistant is now live. Explore some of the earlier prompts to verify the assistant is accessing the ingested documents and your skills and skill flows are active.

⚠ Wait 5-10 seconds before clicking apply on skill actions.

Prompts to try:

What is z/OS continuous delivery?

Get z/OS facts

Show me z/OS facts

Gather and display z/OS facts

Adding other integrations

IBM watsonx Assistant for Z can integrate with other delivery channels beyond a web page. Other channels include Slack, Microsoft teams, WhatsApp, and many others. Integrating with these and other channels are not covered in the lab guide. However, follow the steps after this to find the current channels that are supported and where to get more information.

1. Hover over the Home () and click **Integrations**.

The screenshot shows the IBM watsonx Orchestrate interface. The left sidebar has a tree view with 'Home' selected under 'Build'. The main area displays a 'Build actions' card and a 'Zeeves' integration diagram. The 'Integrations' section in the sidebar is highlighted with a green border. The diagram shows the Zeeves integration structure with nodes like 'Default behavior', 'Actions', and 'Fallback' connected to various channels and agents.

2. Explore the **Essential channels** and **Channels** sections.

The screenshot shows the 'Integrations' section with 'Essential channels' highlighted. It includes a 'Web chat' card and a 'Channels' section with tiles for 'SMS', 'Facebook messenger', 'Genesys Bot Connector', 'Slack', 'Microsoft teams', and 'WhatsApp with Twilio'. A green dashed box highlights the 'Essential channels' and 'Channels' sections.

3. Click **Add** on the **Slack** tile.

The screenshot shows the 'Integrations' section of the IBM Watsonx Orchestrate interface. It includes sections for 'Essential channels' (Web chat, Contact center integrations), 'Channels' (SMS, Facebook messenger, Genesys Bot Connector, Slack, Microsoft teams, WhatsApp with Twilio), and 'Extensions'. The Slack integration card is highlighted with a green border.

4. Click Add.

A modal dialog box for adding a Slack integration is displayed. It contains instructions: 'Let your assistant respond directly in Slack. Add your assistant as a bot user to your Slack app, answering questions from direct messages or channels.' The 'Add' button at the bottom right is highlighted with a green border.

5. Review the step-by-step instructions and additional information available for adding a Slack integration.

Note: Most users will not have permissions to integrate with your enterprise slack deployment as doing so requires administrative rights.

The screenshot shows a step-by-step guide for setting up Slack. It includes a navigation bar with 'Get started', 'Slack bot', 'Connect Slack', 'Configure Slack', and 'Connect assistant'. The 'Get started' section is highlighted with a green dashed box. It contains text about joining the collaboration hub and a 'Learn more' link. Below it is a list of steps: '1. Set up your Slack bot', '2. Connect AI assistant builder to Slack', '3. Configure your Slack bot', and '4. Connect your assistant'. The 'Next' button at the top right is highlighted with a green dashed box.

Take time to further explore the next steps for adding a Slack integration channel and the other supported integration channels.

Learn more about adding integrations [here](#).

Next steps

This lab guide covered many of the IBM Watsonx Assistant for Z capabilities and provides a good base for conducting basic client pilots. However, there is still more to learn about IBM Watsonx Assistant for Z. Updates and new releases of the offering and the underlying offerings like Watsonx Orchestrate rollout on a regular basis. Be sure to stay informed by bookmarking and regularly reviewing the [offering landing page](#) and the [product documentation](#).
