Welcome

Welcome to the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide (lab guide). The lab guide is part of the IBM watsonx Assistant for Z for Technical Sales Level 4 learning plan for IBM and Business Partner Technical Sales and related badge. The learning plan is intended to teach technical sellers and Business Partners how to conduct a proof of experience (PoX) for a client.

In a fast-paced world, things change

The products and services may appear differently than what is shown in the lab guide. This can occur if the product or service is updated with a new version.

Responses generated by IBM watsonx Assistant for Z are likely to change over time. The responses you see when you run the queries in this section may differ from the screen images captured in the lab guide.

This lab guide covers the setup, configuration, and usage of watsonx Assistant for Z. This lab guide uses the [IBM watsonx Assistant for Z Velocity collection](#) and the three Velocity Pilot lab environments in IBM Technology Zone (ITZ).

The lab guide also enables dedicated lab environments for customized client Proof of Experiences (PoX) and demonstrations. If you are preparing for an actual pilot engagement, refer to the [Pilot Scoping Guide for watsonx Assistant for Z](#) for additional information.

The lab guide provides the following guidance to:

- Provisioning the lab environments
- Creating an assistant and configuring conversational search
- Configuring assistant settings
- Testing conversational search
- Deploying a dedicated instance of OpenSearch for client document ingestion (Optional)
- Importing skills for z/OS automations
- Connecting apps to assistants
- Creating assistant actions
- Creating skill flows and custom-built actions
- Importing pre-packaged z/OS skills
- Publishing and deploying your assistant

Support

Think something is down? Check the applicable status pages for any known issues such as a site or service not being available:

- [IBM Technology Zone](#)

For issues with provisioning the ITZ environment for this lab (for example, a failed reservation request due to insufficient quota capacity), open a ticket with ITZ support:

- Web: [IBM Technology Zone](#)
- Email: techzone.help@ibm.com

For issues related to specific steps found in the demonstration guide after the ITZ environment is provisioned, contact the authors:

- Slack:
 - [#watsonx-assistant-z-technical](#) - IBM only
 - [#wxo-practitioners](#) - IBM only - for questions that are related to the software as a service (SaaS) instance of watsonx Orchestrate
- Email: andrewj@us.ibm.com and maxwell.g.weiss@ibm.com

Business Partners, use the IBM Training live Chat Support service or other support methods that are found on the IBM Training portal [here](#).

Using the demonstration guide

Use these helpful tips to take full advantage of the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide.

🖨 Printing the demonstration guide

⚠ Printed or saved copies can be out of date

The IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide changes regularly to match the IBM watsonx Assistant for Z offering and associated ITZ environment. Printed or saved copies of the demonstration guide can become out-of-date quickly and result in failed steps.

A ready-to-print PDF version of the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide is [here](#).

🖼 Viewing images

Images in the demonstration guide can be enlarged by clicking on the image. Press the **Esc** key or click the **X** to dismiss the enlarged image.

Reserve the IBM Technology Zone environment

IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide

Welcome

Reserve the IBM Technology Zone environment

Pilot setup

Next steps

2. Click **Reserve now**.
The **Reserve now** option creates a reservation for immediate use. Optionally, schedule the reservation for a later date, like when you will be at your client's office.

3. Complete the reservation request and click **Submit**.
The first two reservations will be similar to the first image below and have fields **a-e** that will need to be completed.

- a. Optionally, change the **Name** field for the reservation.
- b. Select the **Education** purpose tile.
- c. Enter a **Purpose description**.
- d. Select the region nearest your physical location in the **Preferred Geography** drop-down.
- e. The **End date and time** will be set to 2 days after the current date and time.
- f. Accept the IBM Technology Zone's terms and conditions and security policies.
- g. When satisfied with the parameters, click **Submit**.

Image highlighting

In some images, the following styles of highlighting are used:

- **Solid highlight box:** This style of box highlights where to click, enter, or select an item.

- **Dash highlight box:** This style of box highlights one of two things: the path to follow to get to a specific location in the user interface, or areas to explore on your own.

Copying commands and prompts

Copying and pasting commands and prompts from this demonstration guide is easy and can eliminate typographical errors.

Click the highlighted copy icon and then use your operating system's paste function. For example, ^ Ctrl + V or right-click and select Paste.

Prompt 1

What is the APF list in z/OS? Provide a detailed explanation.

Acronyms and terminology

IBM employees and the tech industry in general, tend to use acronyms. In the demonstration guide, most acronyms will appear with a dashed underline. Hover over the acronym to learn its meaning. A question mark (?) icon will first appear and after a second the tool tip with the acronym's meaning is displayed. Try it here: LPAR.

Guidance for delivering a demonstration

Specific guidance for IBM watsonx Assistant for Z and the ITZ environment

Following the scripts provided in the IBM watsonx Assistant for Z for Technical Sales Level 3 Demonstration Guide will help guarantee a successful demonstration. Use these tips to help insure success with IBM watsonx Assistant for Z and the ITZ environment:

- Follow the scripts in the IBM watsonx Assistant for Z for Technical Sales Level 3 Demonstration Guide for the automations and skills to execute as expected.

Table of contents

General demonstration guidance

Specific guidance for IBM watsonx Assistant for Z and the ITZ environment

The Lab Guide table of contents

This **Demonstration Guide** uses a responsive browser-based interface to ensure pages are usable on various devices with different screen sizes. The Demonstration Guide table of contents may be displayed as highlighted in the green dashed box in this image:

The screenshot shows a browser window for the "IBM watsonx Assistant for Z for Technical Sales Level 3 Demonstration Guide". The title bar includes the course name, a refresh icon, and a search bar. The main content area has a green dashed box highlighting the left sidebar, which contains the Table of Contents. The sidebar lists chapters such as "Welcome", "Guidance for delivering a demonstration", "Reserve the IBM Technology Zone environment", etc. The main content area displays the "Welcome" page, which introduces the course goal and provides an overview of the content.

Welcome

Welcome to the **IBM watsonx Assistant for Z for Technical Sales Level 3** course and demonstration guide! The goal of this course is to provide IBM and Business Partner technical sellers the knowledge and tools to demonstrate **IBM watsonx Assistant for Z**.

This course is not intended to serve as an in-depth study of IBM watsonx Assistant for Z, watsonx, or IBM Z; rather the focus is on learning how to deliver a client demonstration of IBM watsonx Assistant for Z. More specifically, the focus is on the *end-user* creating queries and by using trusted automations through skills that are suggested by IBM watsonx Assistant for Z.

Other aspects of IBM watsonx Assistant for Z including creating and configuring assistants, importing and creating new skills, and ingestion of client documentation are **not** covered in this demonstration guide. To learn more and get hands-on with these additional capabilities, check out the Velocity Pilot information in IBM Technology Zone (ITZ) [here](#).

Obtaining the IBM watsonx Assistant for Z Technical Sales Intermediate badge

However, if the browser window is sized smaller, the table of contents can be accessed by clicking the main menu icon (≡):

The screenshot shows the same browser window after the main menu icon (≡) was clicked. The sidebar is now collapsed, and the main content area displays the "Welcome" page. The main menu icon is highlighted with a green box.

Welcome

Welcome to the **IBM watsonx Assistant for Z for Technical Sales Level 3** course and demonstration guide! The goal of this course is to provide IBM and Business Partner technical sellers the knowledge and tools to demonstrate **IBM watsonx Assistant for Z**.

Click the main menu icon (≡) to expand the table of contents.

Continue to the [Reserve the IBM Technology Zone environments](#) section to begin the journey to obtain the IBM watsonx Assistant for Z Technical Sales Advanced badge.

IBM Technology Zone environment

To enable sellers to learn how to deliver client pilots of IBM Watsonx Assistant for Z, multiple environments are available in IBM Technology Zone (ITZ). The following environments are used for the Watsonx Assistant for Z Velocity lab environment and can be found in the [IBM Watsonx Assistant for Z collection](#):

- **Watsonx Assistant for Z lab – Watsonx Orchestrate:** a dedicated environment with Watsonx Orchestrate on IBM Cloud that is used for creating and configuring the assistant, configuring conversational search, importing skills, and configuring actions.
- **Ansible Automation Platform (AAP) & z/OS:** a pre-configured instance of AAP and Wazi z/OS. The environment includes preinstalled Ansible playbooks that can be imported as skills within Watsonx Orchestrate and connected to your assistant. The environment provides preinstalled templates for various use cases that are covered in a later section. Learn more about AAP [here](#). Learn more about Wazi, [here](#).
- **Single Node OpenShift with NFS storage:** used to provision a single-node Red Hat OpenShift cluster (SNO) on IBM Cloud. The cluster is used to install a dedicated instance of [OpenSearch](#) for Watsonx Assistant for Z. This environment enables ingestion of client-supplied documents.

All activities in this lab guide are required.

While all three environments may not be required for every client pilot, to complete the Level 4 learning plan and earn the IBM Watsonx Assistant for Z Technical Sales Advanced badge, you must provision all three ITZ environments and complete all sections in the lab guide. **Any statements in the ITZ collection regarding optional environments or tasks should be ignored.**

Follow the instructions in to create new reservation requests, extend the reservations, and access the ITZ demonstration environments. Provisioning the SNO environment in ITZ can take several hours, while the other two environments typically provisioning in under 30 minutes.

Create a reservation request

1. Click each of the links that follow to open a browser to the reservation pages of the [IBM Watsonx Assistant for Z](#) ITZ environments.

You may be asked to authenticate to IBM Technology Zone.

The steps to authenticate to ITZ are not detailed here as they may vary between users.

[Watsonx Assistant for Z lab – Watsonx Orchestrate - reservation page](#)

[Ansible Automation Platform \(AAP\) & z/OS - reservation page](#)

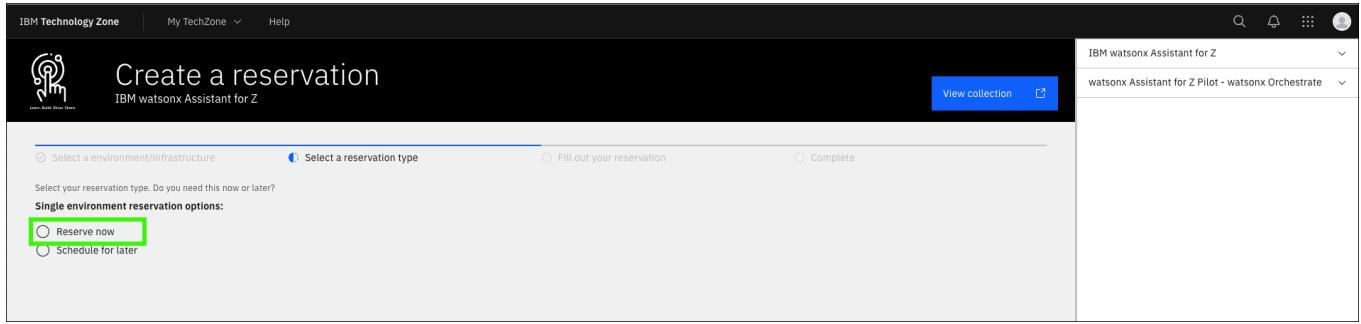

Single Node OpenShift with NFS storage - reservation page

 The next two steps are for one of the three environments. Repeat for all three environments.

Be sure to follow these steps to create a reservation in ITZ for all three environments.

2. Click **Reserve now**.

The **Reserve now** option creates a reservation for immediate use. Optionally, schedule the reservation for a later date, for example, when you are at your client's office to start a pilot.

The screenshot shows the 'Create a reservation' interface. At the top, there are tabs for 'Select a environment/infrastructure', 'Select a reservation type', 'Fill out your reservation', and 'Complete'. Below these tabs, it says 'Select your reservation type. Do you need this now or later? Single environment reservation options:' with two radio buttons: 'Reserve now' (selected) and 'Schedule for later'. The 'Reserve now' button is highlighted with a green box.

3. Complete the reservation request and click **Submit**.

The first two reservations are similar to the first image and have fields **a-e** that need to be completed.

- a.** Name: specify a name for the reservation (optional).
- b.** Purpose: select the **Education** purpose tile.

For actual client pilots...

For client pilots, set the **Purpose** field in the reservation to **Pilot** and provide an opportunity number to receive a longer reservation.

- c.** Purpose description: enter a description, for example: Level 4 education.
- d.** Preferred geography: select the region nearest to your physical location for improved performance and reduced network latency.
- e.** End date and time: the initial maximum will be set to two days after the current date and time. Instructions follow to extend the reservation end date.
- f.** Accept the IBM Technology Zone's terms and conditions and security policies.
- g.** Click **Submit**.

m I agree to IBM Technology Zone's [Terms & Conditions](#) and [End User Security Policies](#)

n Submit

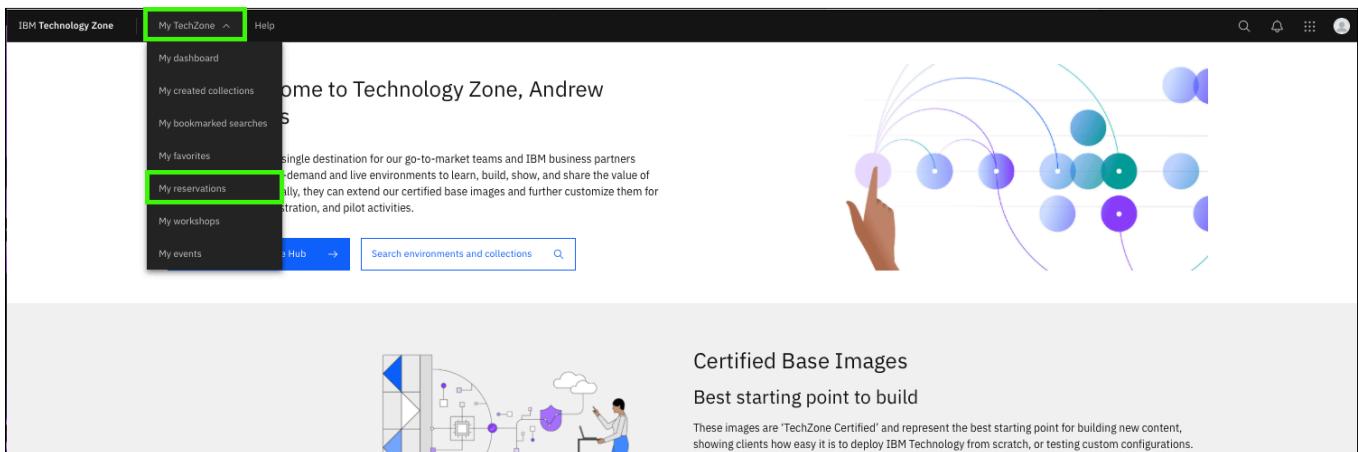

During the provisioning process, multiple emails are sent to you from ITZ as the provisioning process runs. One email states the reservation is provisioning and the other email states that the environment is **Ready**.

In rare cases, the provisioning process may fail. If you receive an email stating the reservation failed, try again by repeating Steps 1-3 for the environment that failed to provision. In addition, review the [Troubleshooting](#) section that follows. If issues continue, open an [ITZ support ticket](#) by using the methods that are mentioned in the [Support](#) section.

Extend the reservation

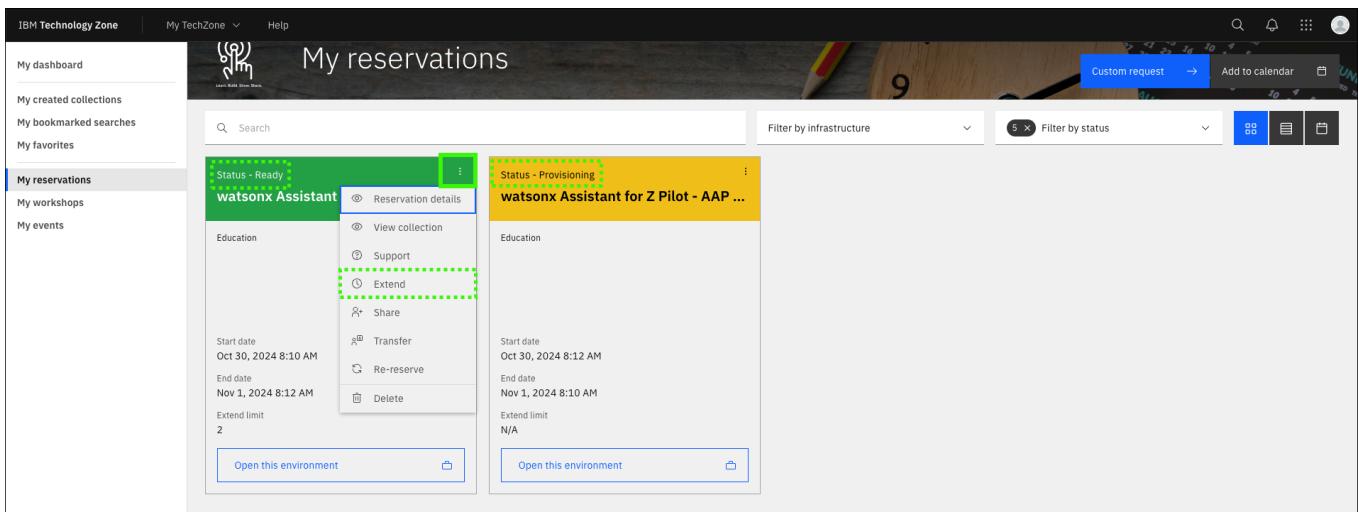

When the reservations are in the **Ready** state, you can extend each reservation to a total of six days.

4. In the IBM Technology Zone portal, expand **My TechZone** and select **My Reservations**.

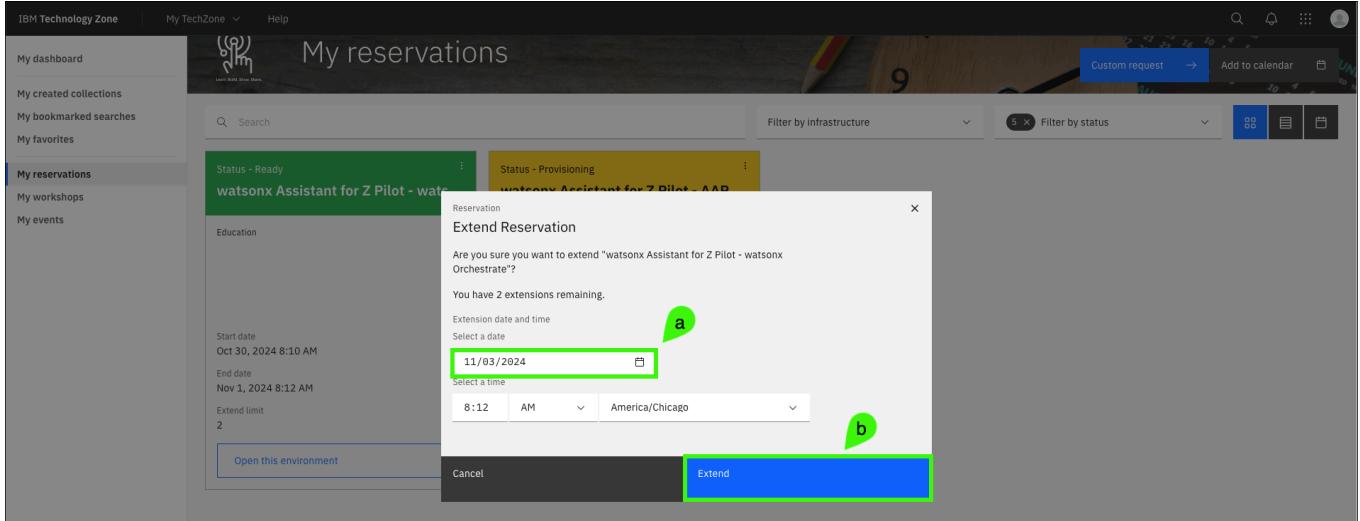

The screenshot shows the IBM Technology Zone homepage. At the top left, there's a navigation bar with 'IBM Technology Zone', 'My TechZone ▾', and 'Help'. Below this is a sidebar with links: 'My dashboard', 'My created collections', 'My bookmarked searches', 'My favorites', 'My reservations' (which is highlighted with a green box), 'My workshops', and 'My events'. To the right of the sidebar, the main content area displays a welcome message 'Welcome to Technology Zone, Andrew' and a graphic of a hand pointing at a network of nodes. Below this, there's a section titled 'Certified Base Images' with a sub-section 'Best starting point to build' and a note about TechZone Certified images.

5. Click the overflow icon (≡) on the reservation tile and select **Extend**.

The screenshot shows the 'My reservations' page. The left sidebar is identical to the previous screenshot, with 'My reservations' selected. The main area lists two reservations. The first reservation, 'watsonx Assistant', has a green status box 'Status - Ready'. A context menu is open over this tile, with the 'Extend' option highlighted (also in a green box). Other options in the menu include 'Reservation details', 'View collection', 'Support', 'Transfer', 'Re-reserve', and 'Delete'. The second reservation, 'watsonx Assistant for Z Pilot - AAP ...', has a yellow status box 'Status - Provisioning'. It also has a context menu with similar options. At the bottom of the page, there are buttons for 'Open this environment' and a filter section.

6. Click the **Select a date** option, (a) specify the date to extend to, and then (b) click **Extend**.

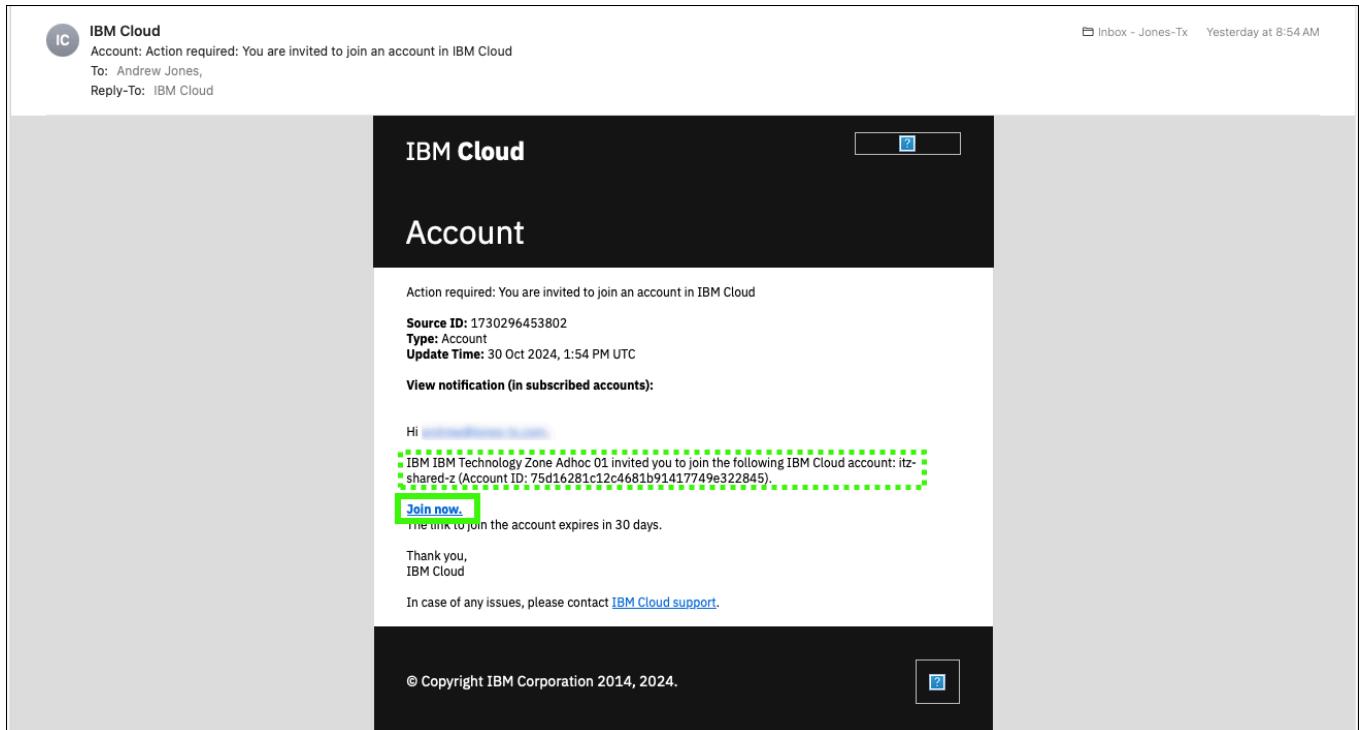

If you anticipate needing more time, repeat Steps 5-6 to extend the reservation to the maximum of six days. Repeat these steps for the other two reservations.

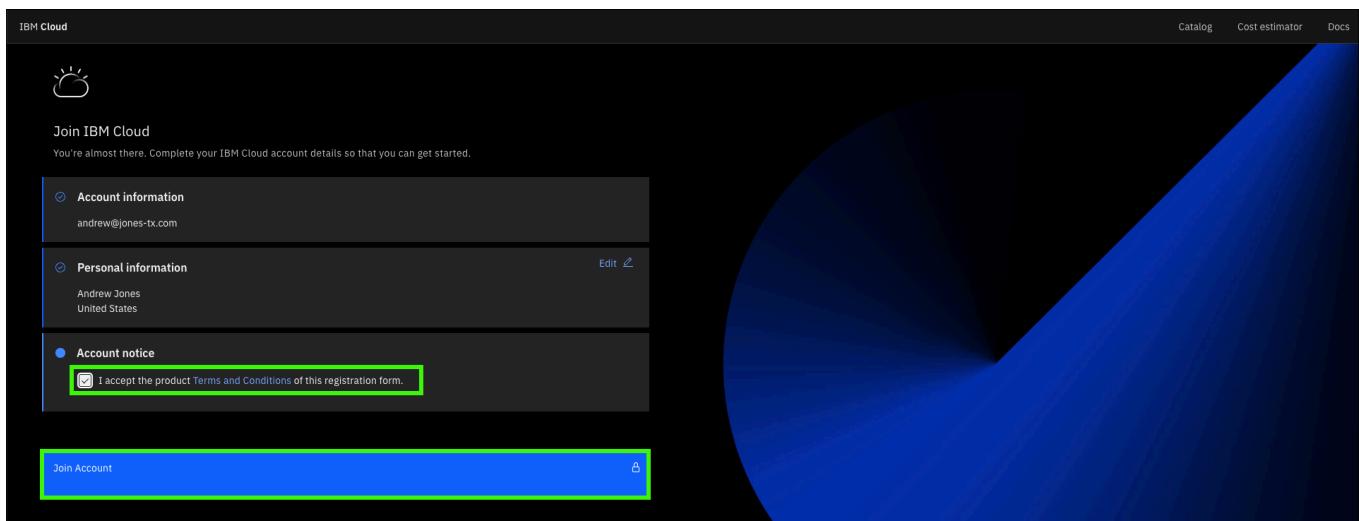

Join the ITZ IBM Cloud accounts

Both the **watsonx Assistant for Z lab – watsonx Orchestrate** and the **Ansible Automation Platform (AAP) & z/OS** environments add you to an IBM Cloud account while your reservation is active. During the provisioning process of these ITZ environments, you receive two emails from IBM Cloud. To access the environment, you must first accept the invitations to join both of the IBM Cloud accounts.

7. Open the emails from **IBM Cloud** and click the **Join now** links.

8. In the **Join IBM Cloud** browser window that opens, select the **I accept the product Terms and Conditions** of the registration form, and then click **Join Account**.

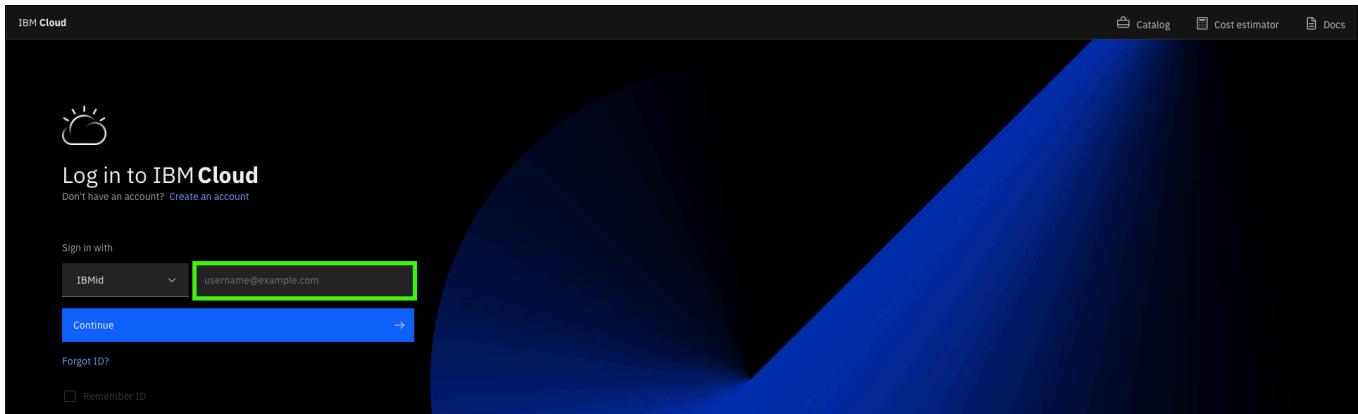

Repeat Steps 7-8 for the second invitation.

After joining both accounts, verify that both accounts appear in your available account list in the IBM Cloud portal.

- Click the following link to open a browser to the IBM Cloud portal.

IBM Cloud portal

- Follow the directions to complete the authentication to IBM Cloud using the same email address you used to login to ITZ. The login steps vary depending on any two-factor authentication methods enabled.

- Click the **account** menu and verify access to the two IBM Cloud accounts listed in your ITZ reservations.

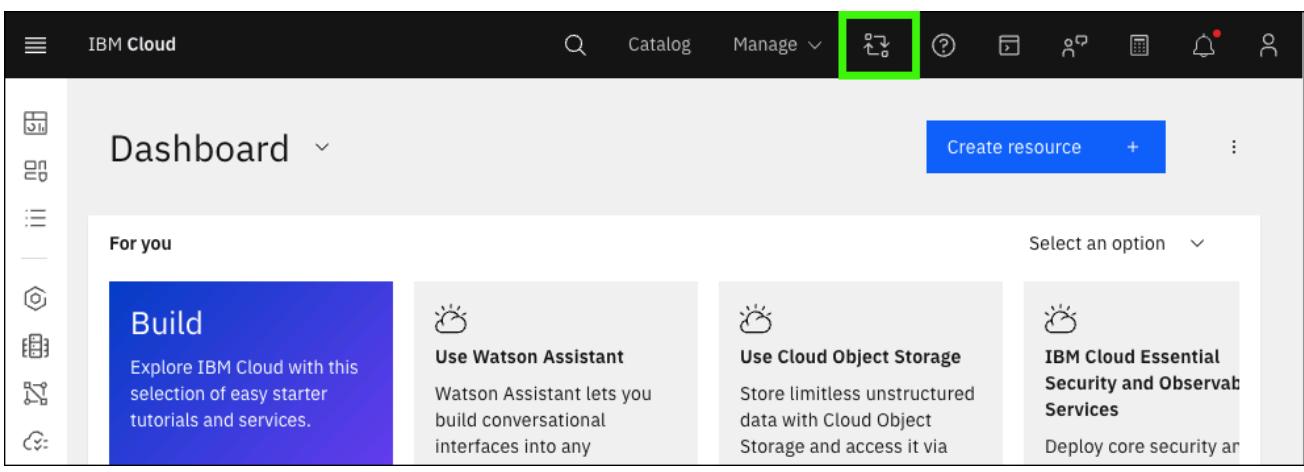

These accounts may change within ITZ.

Over time, the accounts may change for the environments. The accounts names should align with the accounts named in the invitation emails you received.

 Does your IBM Cloud portal view look different?

If your IBM Cloud portal looks different from the images above, it could be because the IBM Cloud portal has gone through a design change, or your browser window is set to smaller size. Instead of the current selected account appearing in the top menu, you may see this **change account** icon:  Click this icon to view the list of accounts you can access.

Accessing the environments

Each reservation provides access to its respective environment. Details for accessing each environment are provided in the **Pilot setup** sections that follow in the lab guide.

After all three reservations are in the **Ready** state and you accept the invitations to the IBM Cloud accounts, proceed to the next section to complete the pilot setup.

Troubleshooting

 If your reservation for the Single Node OpenShift environment fails...

If your reservation for the Single Node OpenShift environment fails, try selecting one of the **eu-gb region** options as the **Preferred Geography**.

Pilot setup

Creating an assistant and configuring conversational search

To create your watsonx Assistant for Z, use [watsonx Orchestrate](#) to create the assistant and configure conversational search. You can configure your assistant to use conversational search by using a hosted [OpenSearch](#) instance. The pre-configured instance in IBM Technology Zone (ITZ) has over 220 knowledge sources and supports Retrieval Augmented Generation (RAG). The large language model (LLM) providing the conversational AI augments this knowledge based on IBM Z documentation. All of these elements create IBM Z context-aware responses to queries with its content-grounded knowledge.

Access the ITZ IBM Cloud account for the watsonx Assistant for Z Pilot environment

1. In the IBM Technology Zone portal, expand **My TechZone** and select **My Reservations**, or click the following link.

ITZ My reservations

Welcome to Technology Zone, Andrew

Single destination for our go-to-market teams and IBM business partners to find and live environments to learn, build, show, and share the value of IBM Z. Additionally, they can extend our certified base images and further customize them for development, test, and pilot activities.

Certified Base Images

Best starting point to build

These images are 'TechZone Certified' and represent the best starting point for building new content, showing clients how easy it is to deploy IBM Technology from scratch, or testing custom configurations.

2. Click the **watsonx Assistant for Z Pilot - watsonx Orchestrate** tile.

Powered by IBM Watsonx

The assistant is now created.

Configure conversational search

The next step will be to configure **conversational search** for your assistant that uses a hosted instance of OpenSearch.

14. Click **Generative AI** menu item (💡) in the left navigation.

15. Review the base large language model (LLM) settings.

Notice the other LLM models available. For most pilots, the **granite-3-8b-instruct** model is appropriate.

16. Click Set up your Search Integration.

By default, conversational search is not enabled when an assistant is created. Conversational search takes priority over general-purpose answering if both are enabled. Learn more about conversational search in watsonx [here](#).

17. Click Custom service.

18. Complete the **Custom service form and then (d) click **Next**.**

a. Select **By providing credentials**.

b. Enter the following value in the **URL** field (use the copy icon to avoid typographical errors). This is the **URL** for the a shared **OpenSearch** instance. In later sections you will created and customize a dedicated instance.

https://wxa4z-opensearch-wrapper-wxa4z-demo.wxo4z-opc-opensearch-clus-47e063e6a3ad1f71bf2e58f91c3b4c2e-0000.us-south.containers.appdomain.cloud/v1/query

c. Select **None** in the **Choose an authentication type** drop-down list.

19. Enable conversational search and then click **Save.**

20. Update the conversational search **custom service** settings based on your requirements.

Note: the **Settings** page is divided into two sections in the following images to enhance the visibility of the screen captures. Learn more about these settings [here](#).

The following settings are proven to work well. You can experiment with these settings to see how they affect queries for your client's pilot.

a. Enable **Conversational search**.

b. Select **Single turn**. Enabling **multi-turn conversation** (by selecting Entire conversation) is not yet supported for the solution on-premises. Be mindful in using this option and help ensure that the client understands what is supported in the solution.

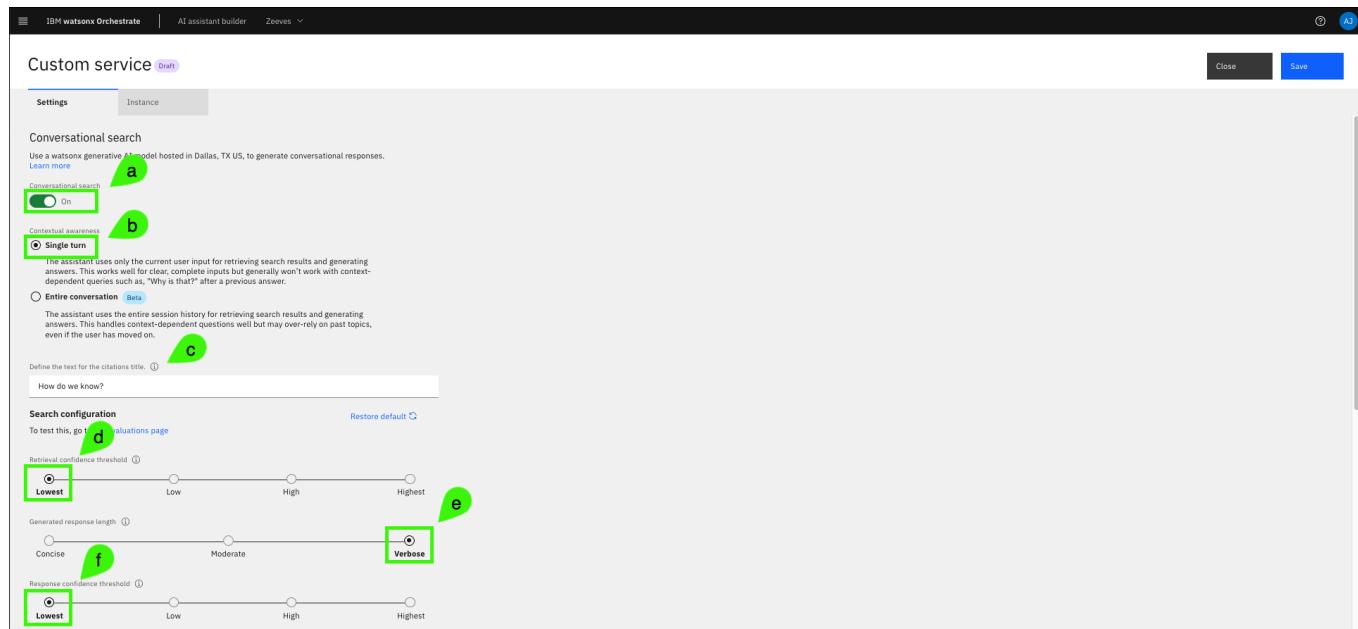

c. Specify the text that appears to instruct the user to expand the list of citations in the assistant (except web chat client).

d. Select **Lowest** for the **retrieval confidence threshold** setting. This setting checks the confidence of the retrieved citations before a response is generated.

e. Select **Verbose** for the **generated response length**. This setting affects the average response length.

Depending on user input, variations from the selected length can occur.

f. Select **Lowest** for the **response confidence threshold**. This setting checks the confidence of the generated citations after the response is generated.

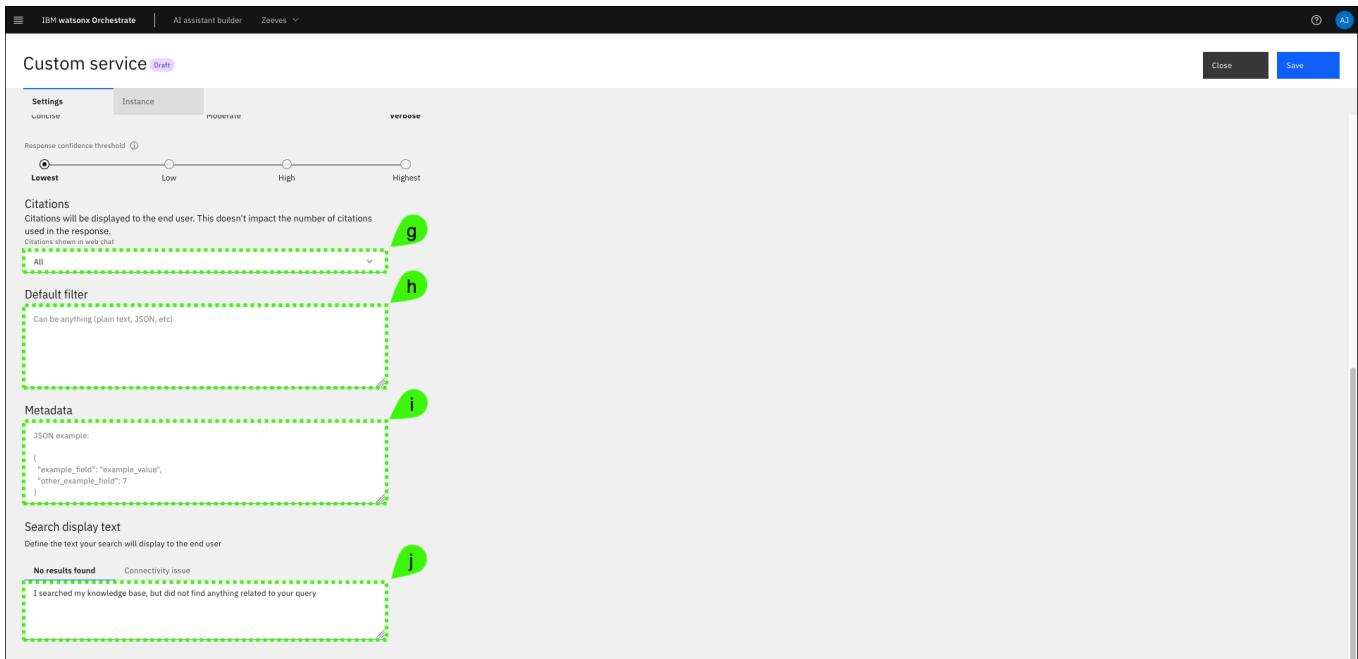

g. Keep the default setting of **All** for the listing of citations.

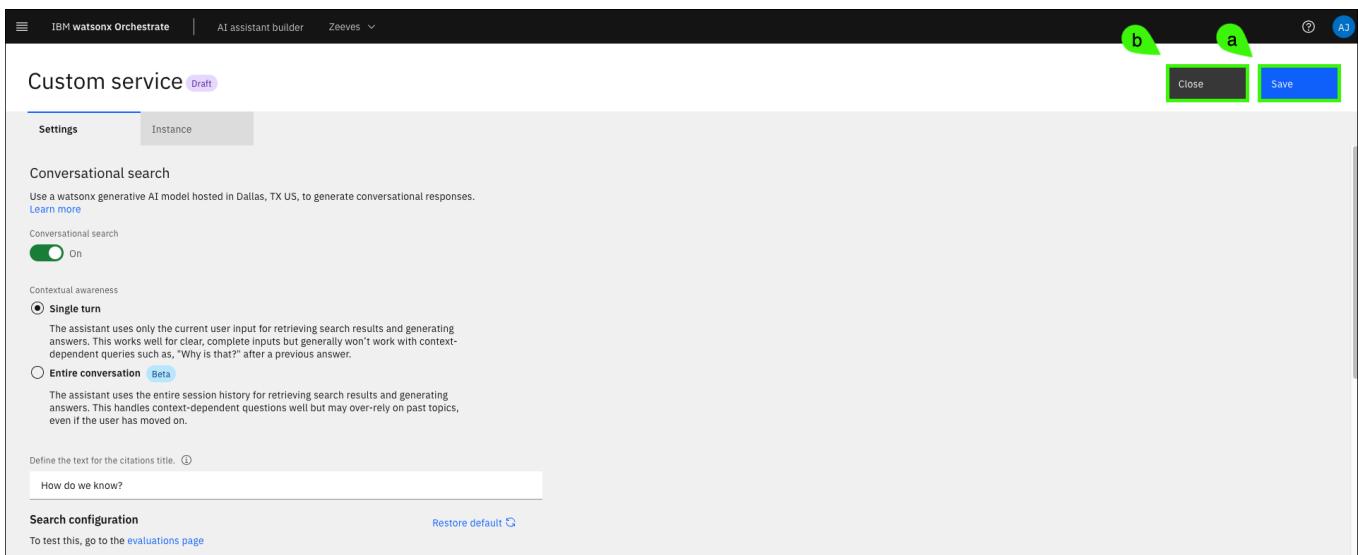

h. Keep the **Default filter** field empty.

i. The **Metadata** field provides a way to adjust your assistant's behavior during conversational search for your OpenSearch instance. This option is explored in detail in the [Installing and using zassist to ingest client documents](#). Leave the field empty for now.

j. The **Search display text** options specify the default text displayed when no results are found or when connectivity issues to the backend search service occur. You can keep the defaults or customize the service.

21. Click (a) **Save** and then click (b) **Close**.

More configurations

After you save and close the **Conversational search** configuration page, a few more configurations are needed to get the best experience from your conversational chat. Details on these settings are available [here](#).

22. Hover over the **Generative AI** icon (💡) in the left navigation and click **Actions**.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with 'Actions' highlighted. The main area is titled 'Generative AI' and contains sections like 'Language model (LLM) Beta', 'Instructions', and a 'Preview' window. The 'Preview' window shows a message from 'Greet customer [default]' at 2:08 PM: 'Welcome, how can I assist you?'. There's also a note about accepting terms.

23. Click **Set by assistant** under the **All items** menu.

The screenshot shows the 'Actions' section of the AI assistant builder. The 'All items' dropdown is open, and 'Set by assistant' is selected, highlighted with a green box. Below it, other options like 'Created by you' and 'Variables' are listed. To the right, there's a 'Create your first action' guide and a preview of a purple cube with blue speech bubbles.

24. Click **No matches**.

The screenshot shows the 'Actions' section with a table of actions. The table has columns: Name, Last edited, Examples Count, and Status. The rows include 'Greet customer', 'Trigger word detected', 'No matches' (which is highlighted with a green box), and 'Fallback'. All actions have a status of 'Green'.

Name	Last edited	Examples Count	Status
Greet customer	3 hours ago	1	Green
Trigger word detected	3 hours ago	1	Green
No matches	3 hours ago	1	Green
Fallback	3 hours ago	1	Green

25. Click **Step 1** under **Conversation steps**.

The screenshot shows the 'Conversation steps' section. Step 1 is highlighted with a green box. It contains a 'Customer starts with:' input field with the placeholder 'Example: Can I have a sandwich?' and a 'Conversation steps' table. The table has two rows: 'No matches count <= 3' (highlighted with a green box) and 'This step has no content'. To the right, there's a 'Action starts' section and an 'Additional training examples (optional)' section.

26. Select **(a) without conditions** in the **Is taken** drop-down menu and then click **(b) Clear conditions**.

Note, the **Is taken** value does not change from **with conditions** after selecting **without conditions**.

Step 1

Is taken: with conditions

Conditions:

If All of this is true:

No matches count <= 3

and Add condition +

New condition group

Assistant says

I'm afraid I don't understand.

Clear conditions?

Are you sure you want this step taken without conditions? All conditions and condition groups will be deleted.

Cancel

Clear conditions

27. Delete the default text in the **Assistant says** entry field.

Step 1

Is taken: without conditions

Assistant says

For example: Please select from the following options:

Define customer response

And then

End the action

28. Expand the **And then** drop-down menu and select **Search for the answer**.

Step 1

Is taken: without conditions

Assistant says

For example: Please select from the following options:

Define customer response

And then

End the action

Search for the answer

Return results from a search integration.

Requires a search integration

Continue to next step

Re-ask previous step(s)

Go to a subaction

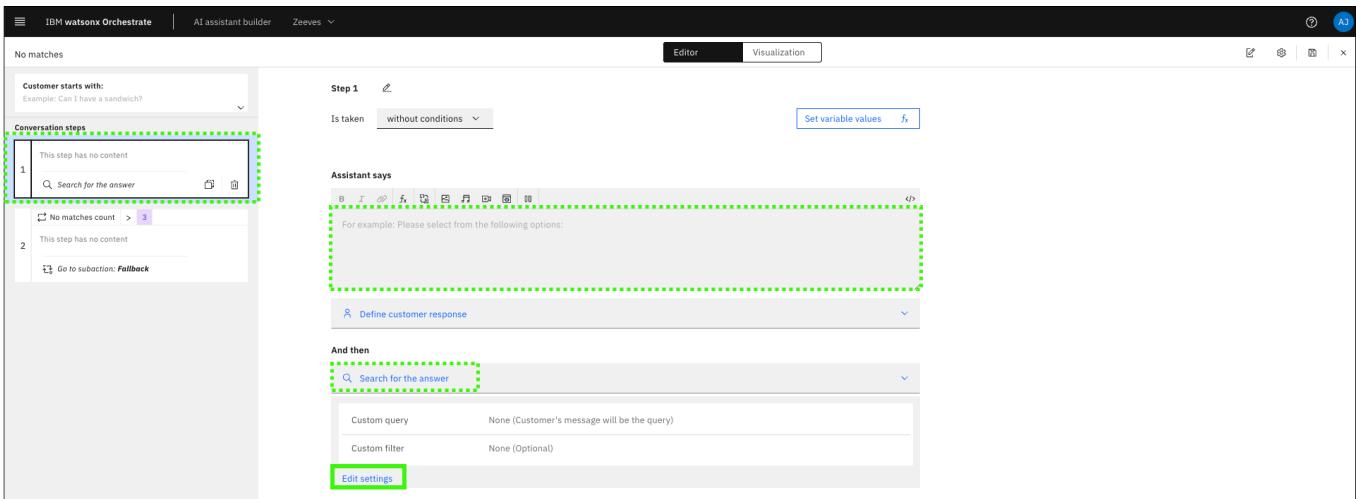

Use an extension

Search for the answer

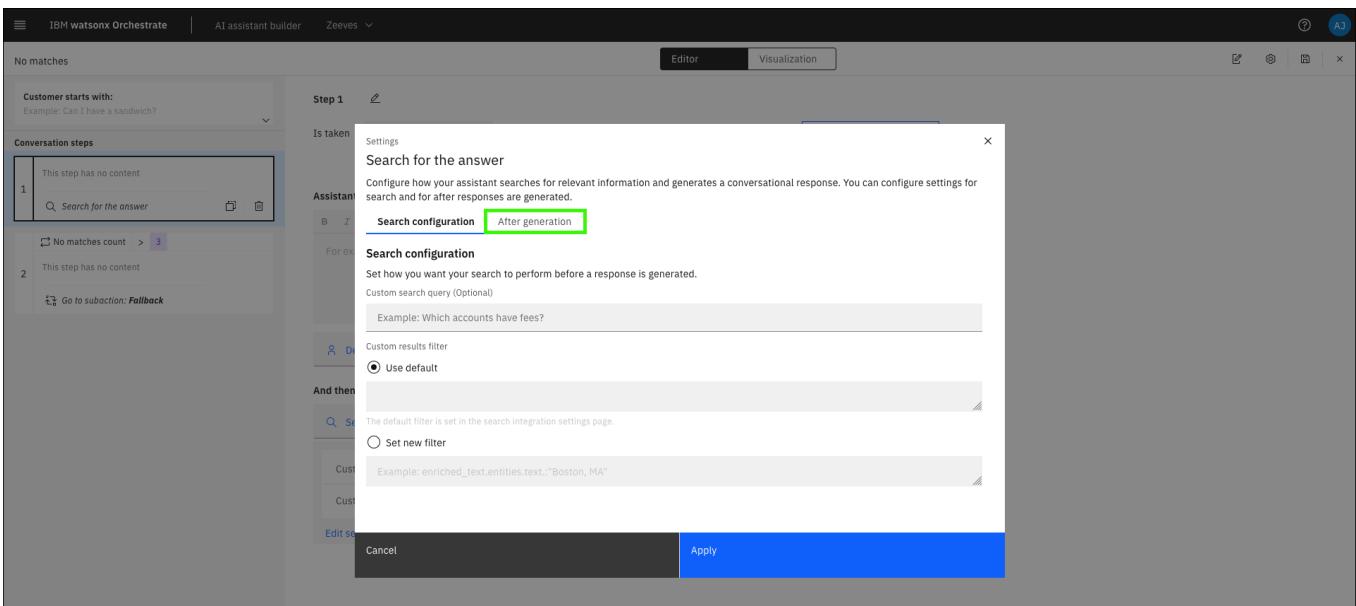

Connect to agent

End the action

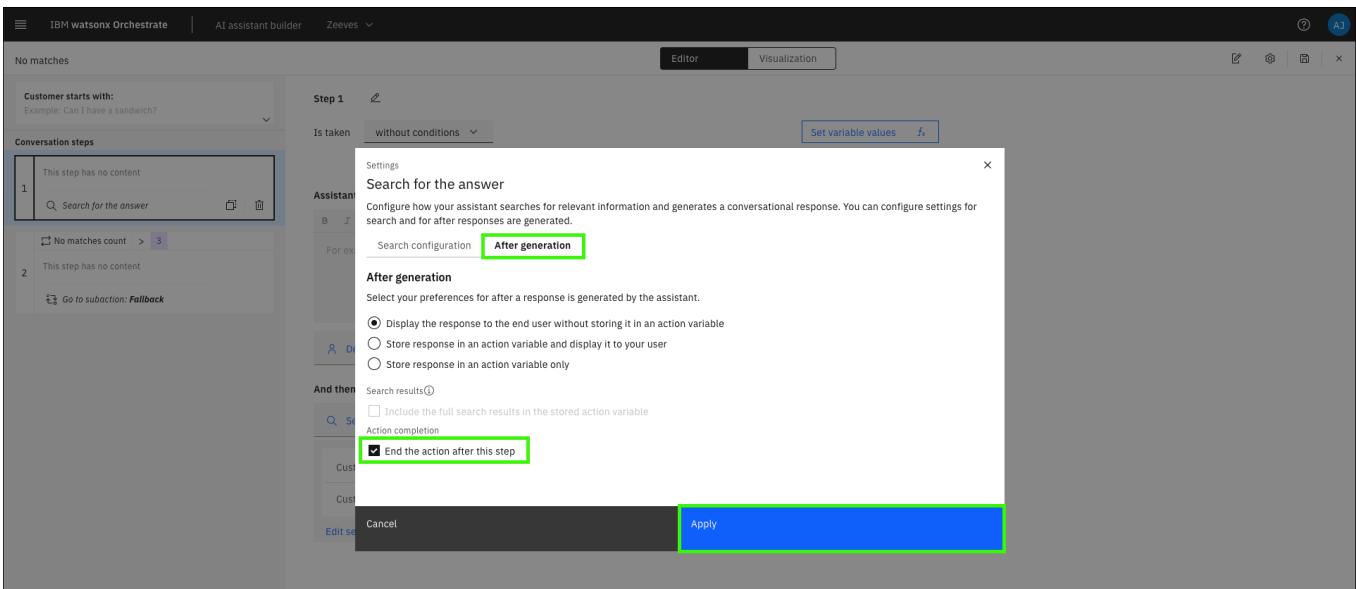

29. Click **Edit settings**.

30. Click After generation.

31. Select End the action after this step and then click Apply.

32. Click the **Save (💾)** icon.

The screenshot shows the AI assistant builder interface with the 'Editor' tab selected. In the 'Conversation steps' section, there are two steps: Step 1 (Search for the answer) and Step 2 (No matches count). Step 2 has a condition: 'If All of this is true: No matches count > 3'. The top right corner of the window frame is highlighted with a green box.

33. Select Step 2 (No matches count) under **Conversation steps** and click the delete icon (ⓧ).

The screenshot shows the same interface as above, but Step 2 is now selected (highlighted with a green box around its row). The delete icon (ⓧ) at the end of Step 2's row is also highlighted with a green box.

34. Click **Delete** in the confirmation dialog to delete step 2.

The screenshot shows the confirmation dialog for deleting Step 2. The dialog text reads: 'Are you sure you want to delete step 2? You will not be able to recover this data once deleted.' At the bottom right of the dialog, the 'Delete' button is highlighted with a green box.

35. Click the **x** to close the **Editor** window.

The screenshot shows the interface after the Editor window has been closed. The top right corner of the main window frame is highlighted with a green box.

36. Click **Fallback** in the **Actions** table.

Name	Last edited	Examples Count	Status
Greet customer	3 hours ago	1	Green
Trigger word detected	3 hours ago	1	Green
No matches	a minute ago	1	Green
Fallback	3 hours ago	1	Green

37. Delete all of the Conversation steps.

Note: the following image is edited. Only 5 steps are shown, but all 6 need to be deleted. You need to select each step individually, click the delete icon (trash), and confirm the deletion.

Step 1

Is taken Set variable values

Conditions 1 condition ^

If All of this is true:

- Connect to agent is Failed to confirm topic return
- and Add condition +

New condition group +

Assistant says

Sorry I couldn't confirm if you wanted to return to previous topic, let me connect to an agent.

And then

Connect to agent (action ends)

If online Let's send you to an available agent.

If offline There are no agents available at this time. When one becomes available, we'll connect you.

38. Verify that all Conversation steps are deleted and then click the x to close the Editor window.

Action starts

When your customer:

- Requests to connect to agent
- Fails step validation within an action
- Reaches the limit for No matches

Use the assistant's default action or customize it.

Additional training examples for connecting to an agent

Tip: Add examples here to train your assistant on how your customer requests an agent.

39. Click the global settings (⚙️).

Name	Last edited	Examples Count	Status
Greet customer	4 days ago	1	Green
Trigger word detected	4 days ago	1	Green
No matches	4 days ago	1	Green
Fallback	4 days ago	1	Green

40. Click No matches under the Conversation routing tab.

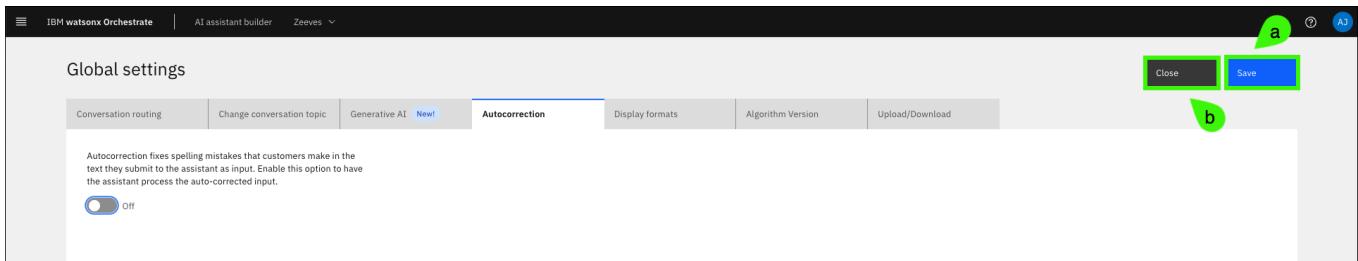

41. Move the slider to **More often** (or select **More often** in the drop-down).

The setting helps ensure that actions are triggered less often unless the user's query specifically matches the action's input.

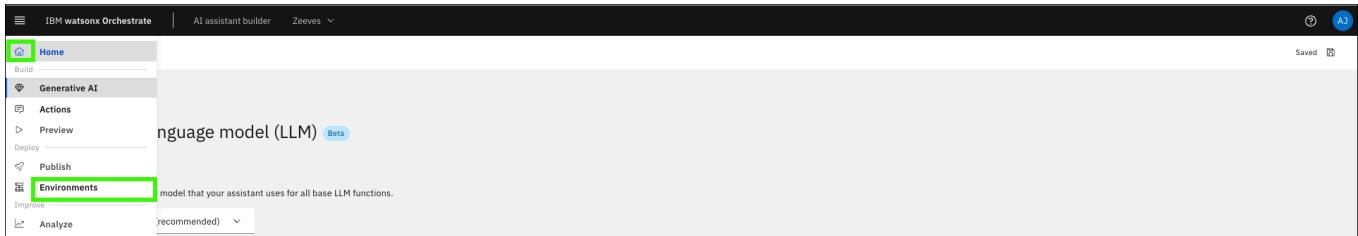

42. Click **Autocorrection**.

43. Click the **autocorrection** toggle to turn the feature **off**.

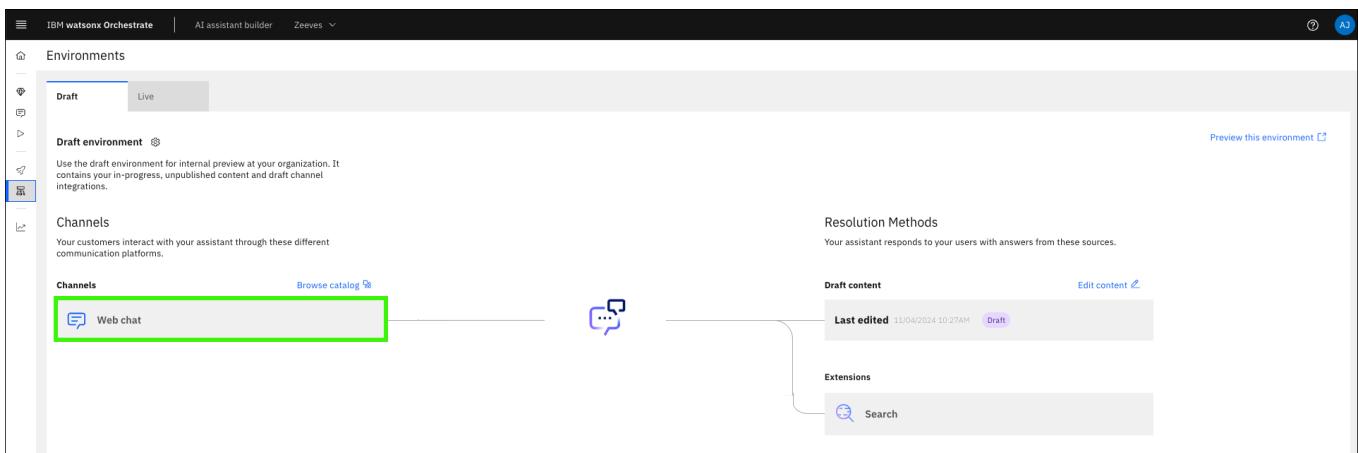

44. Click (a) **Save** and then (b) **Close**.

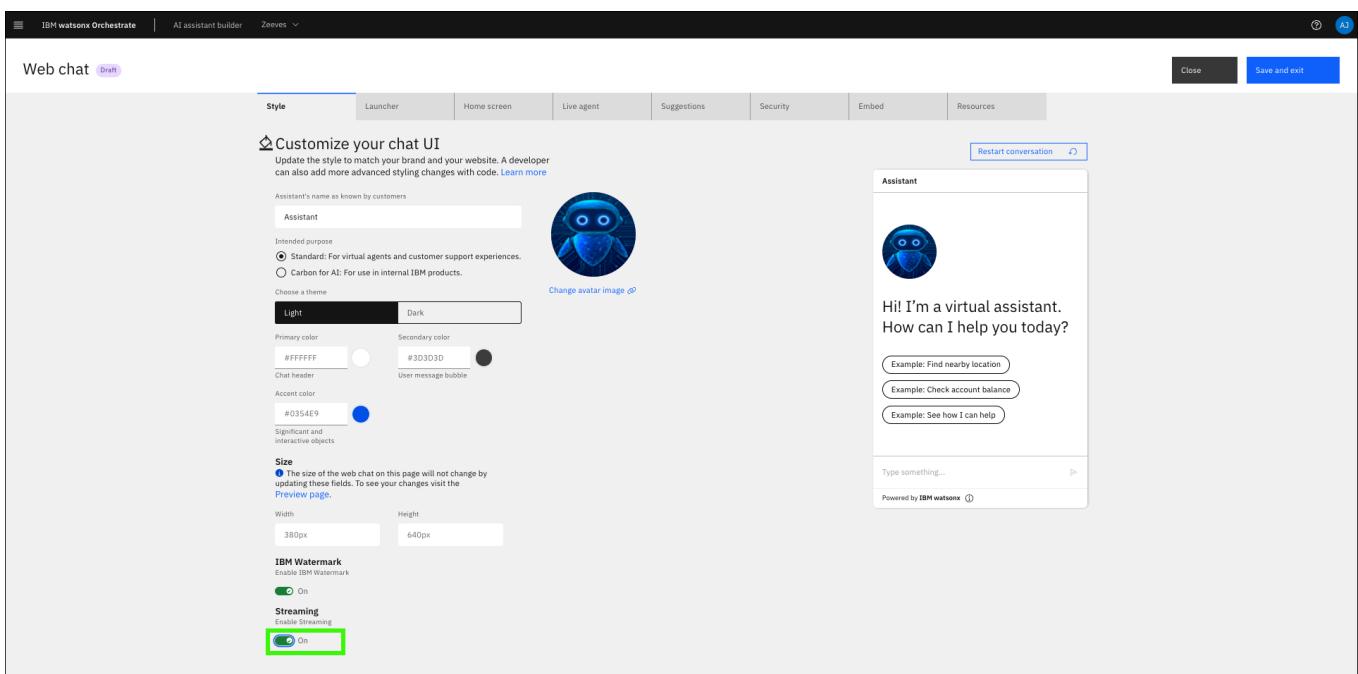

45. Hover over the home (🏠) and click Environments.

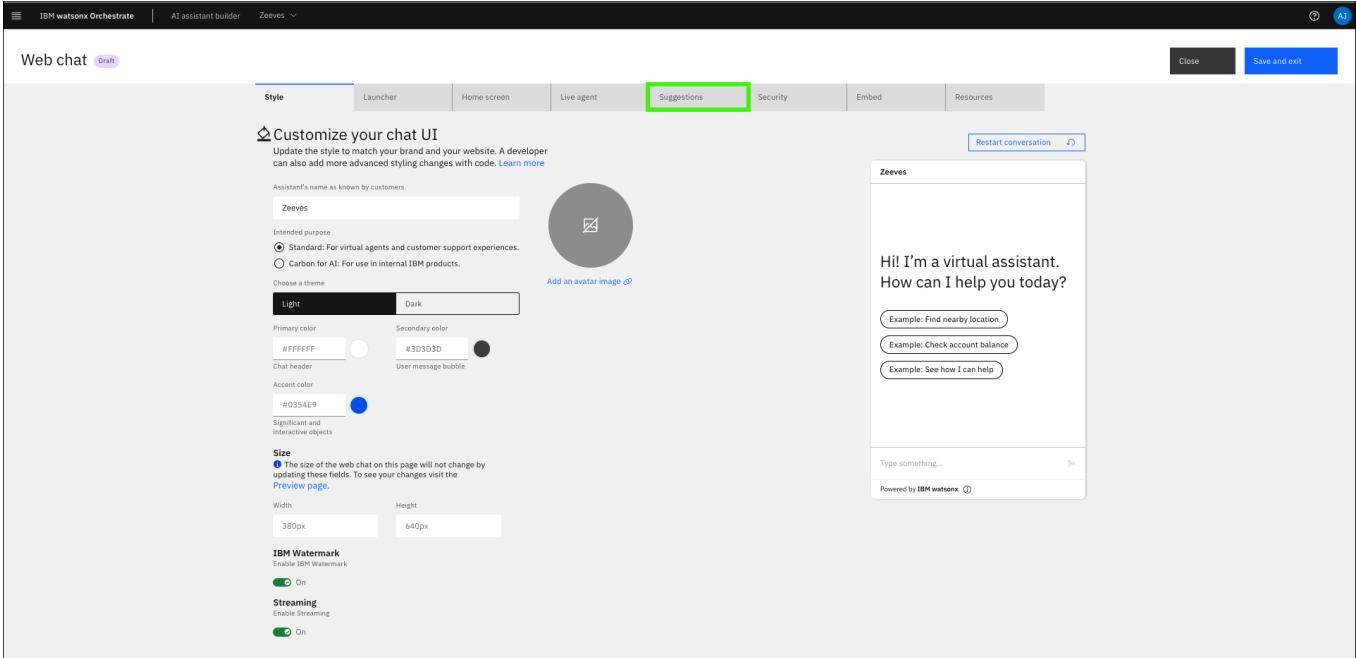

46. Click Web chat.

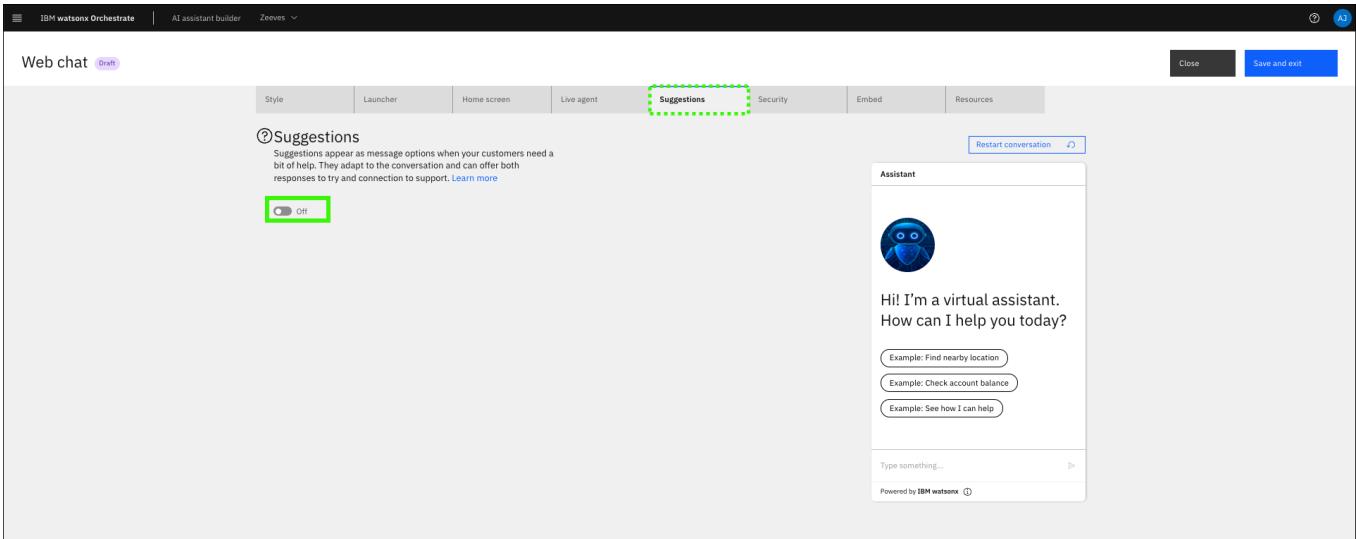

47. On the Style tab, click the Streaming toggle to enable streaming.

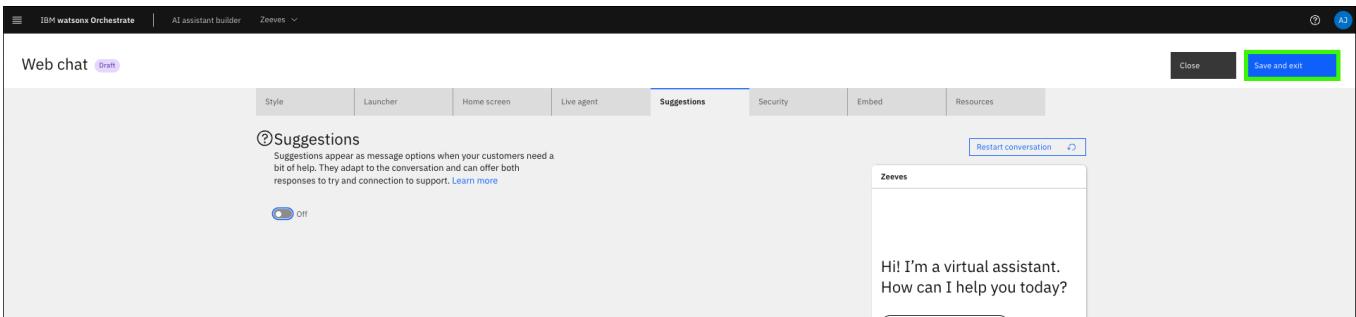

48. Click **Suggestions**.

49. Click the **Suggestions** toggle to turn this feature off.

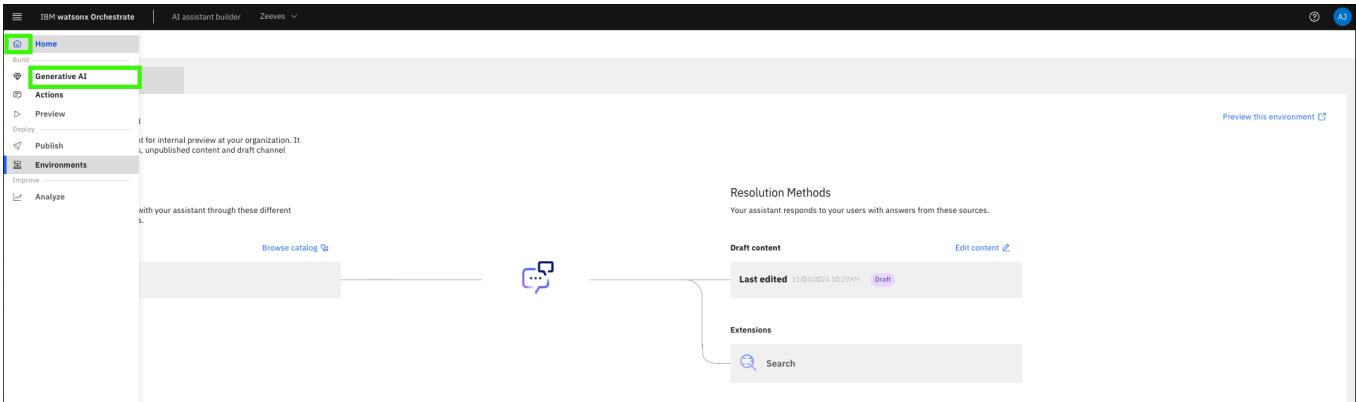

50. Click **Save and exit**.

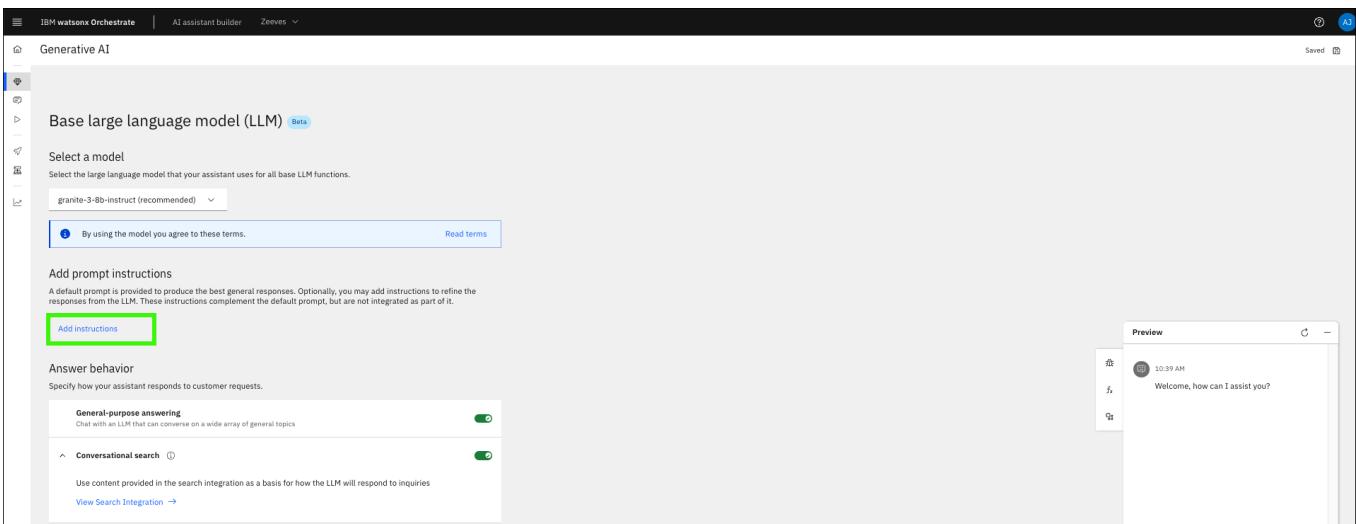

Configure the base large language model

After the preceding steps are completed, there are enhancements that can be made to configure how the large language model (LLM) responds to your queries. Including adding prompt instructions and configuring the LLM's answer behavior. These options can be summarized [here](#).

1. Hover over the home () and click Generative AI.

2. Click Add instructions.

3. Enter a prompt instruction.

This option instructs the LLM in your assistant to give refined responses by adding prompt instructions. The instructions help the LLM guide the conversations with clarity and specifically to achieve the end-goal of an action.

Enter the prompt instructions in the field. The maximum number of characters you can enter in the prompt instruction field is 1,000.

The following is an example prompt instruction that works well. Experiment with different prompt instructions.

You are a subject matter expert on mainframe systems. Please respond to all prompts with truth and accuracy. Keep all answers short and concise, unless requested to provide details.

Note: When the instructions are typed in, they are automatically saved and the LLM is immediately trained on them.

The screenshot shows the 'Generative AI' page in the AI assistant builder. In the 'Answer behavior' section, the 'General-purpose answering' toggle switch is turned on. A green box highlights this section. The preview window on the right shows a message: '10:47 AM Greet customer [default] Welcome, how can I assist you?'.

4. Toggle General-purpose answering to off.

The ability exists to configure the answering behavior of your assistant to provide responses that are based on the preinstalled content or general content.

On the **Generative AI** page (under **Prompt Instructions**), you see the **Answer behavior** section. After you configure **Conversational search**, you see that it is enabled (toggled on) with the search integration added.

If you enable both General-purpose answering as well as Conversational search, the Conversational search answering takes precedence over General-purpose answering.

For purposes of retrieving Z-specific answers and responses, it is recommended that you turn off General-purpose answering and leave only Conversational search turned on.

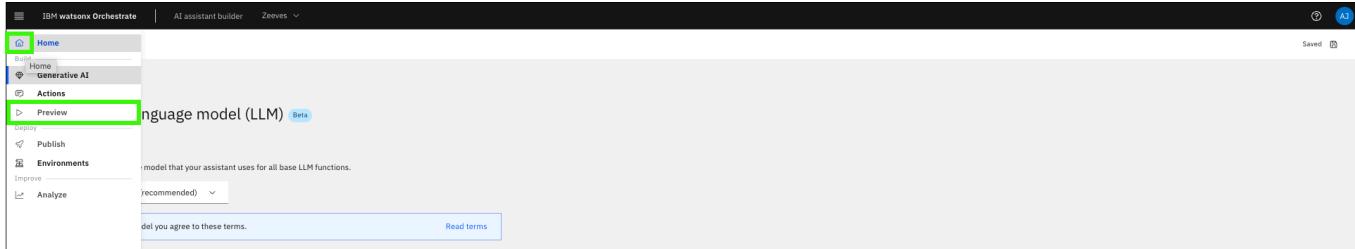

The screenshot shows the 'Generative AI' page in the AI assistant builder. In the 'Answer behavior' section, the 'General-purpose answering' toggle switch is turned off. A green box highlights this section. The preview window on the right shows a message: '10:47 AM Greet customer [default] Welcome, how can I assist you?'.

Testing conversational search

Now, you can begin issuing queries to test the assistant's responses.

It is important to keep in mind that many of the settings configured earlier can be iteratively modified based on your assessment of the quality of responses. The settings can be reviewed and changed at any time. For example, adding extra prompt instructions, changing the verbosity of the responses, and modifying the indexes used for OpenSearch.

53. Hover over the **home** (🏠) and click **Preview**.

54. Experiment with different prompts and validate the answers are reasonable and related to IBM Z.

Other prompts and responses follow. Note: the responses that you receive can vary from the ones shown.

Prompt:

What is the APF list in z/OS? Provide a detailed explanation?

Example output:

The screenshot shows the Zeeves interface. On the left, there's a sidebar with icons for Preview assistant, Sample website, and other options. The main area has a message from 'Zeeves' with a timestamp '11:02 AM'. The message text is: 'What is the APF list in z/OS? Provide a detailed explanation?' To the right, a detailed response is shown in a box with a green border. The response starts with: 'The APF (Authorized Program Facility) list in z/OS is a system component that controls which libraries and data sets are authorized to run in privileged mode. This is used to ensure system security by controlling access to sensitive system resources. The APF list is maintained in the system parameter table (library) and can be managed using various system commands and macros.' It continues to explain the APF list's purpose and how it manages system resources.

Prompt:

Why is Db2 different than other database systems?

Example output:

The screenshot shows the IBM Watsonx Orchestrate interface. On the left is a sidebar with icons for file operations. The main area is titled 'Sample website' and contains a large blue placeholder. On the right, there is a chat window titled 'Zeeves' with a message from 'You' at 11:03 AM asking 'Why is DB2 different than other database systems?'. The AI response explains that DB2 is a mainframe database management system (DBMS) that runs under the z/OS operating system, which is specific to mainframe computers. Other database systems run on various operating systems like Windows, Linux, or Unix. Additionally, DB2 provides a higher level of data management and security features compared to other database systems, as it manages data stored in databases and controls access to the data.

Prompt:

What happens during an IPL on IBM Z?

Example output:

The screenshot shows the IBM Watsonx Orchestrate interface. On the left is a sidebar with icons for file operations. The main area shows a large blue placeholder. On the right, there is a chat window titled 'Zeeves' with a message from 'You' at 11:05 AM asking 'What happens during an IPL on IBM Z?'. The AI response explains that during an IPL (Initial Program Load) on IBM Z, the system loads the operating system into memory and begins executing it. This process can be initiated from various sources, such as the Support Element (SE), Hardware Management Console (HMC), an open system device, or a zManager. The IPL can be used to load a new operating system, recover from a system failure, or perform maintenance tasks. The type of IPL determines whether the Primary Link Pack Area (PLPA) is reloaded and whether VTO data set pages are preserved.

You now have a working assistant that uses IBM watsonx Assistant for Z. Take time to explore different prompt instructions and settings. If you encounter any issues, the Troubleshooting section that follows can help resolve them.

Continue to the [Creating a stand-alone OpenSearch instance for document ingestion](#) learn how to configure a dedicated OpenSearch instance for ingesting client-specific documentation into the RAG model.

Troubleshooting

The following are issues that you may encounter. If the provided resolutions do not work, contact support by using the methods that are mentioned in the [Support](#) section.

 **Assistant responds to all prompts with, "I might have information related to your query to share, but am unable to connect to my knowledge base at the moment"** 

This Assistant is unable to connect to the custom service URL specified. This could be a network issue, the service may be down, the service may be restarting, or the service is no longer running at that URL.

Before reaching out to [Support](#), try the following:

- Wait a few minutes and try again. It may be the service was in the process of restarting.
- If you printed this demonstration guide or saved a copy, verify you are using the most current version of the [lab guide](#) and the correct service URL (<https://wxa4z-opensearch-wrapper-wxa4z-demo.wxo4z-opc-opensearch-clus-47e063e6a3ad1f71bf2e58f91c3b4c2e-0000.us-south.containers.appdomain.cloud/v1/query>). The URL may have changed since you saved or printed the lab guide.

Ingesting client documents

Creating a stand-alone OpenSearch instance for document ingestion

Next, learn to enable a client to ingest their own documentation into the Retrieval Augmented Generation (RAG) used by IBM watsonx Assistant for Z. The first step is to deploy a dedicated [OpenSearch](#) instance. The dedicated search instance will be referred to as bring-your-own-search (BYOS).

Earlier, you provisioned three IBM Technology Zone (ITZ) environments. One of which was a single-node Red Hat OpenShift (SNO) cluster. If you have not reserved this environment, or it is not in the **Ready** state, return to the [IBM Technology Zone environment](#) section to complete the reservation.

Install the Red Hat OpenShift command-line interface utility

The Red Hat OpenShift command-line interface (CLI) utility, which is known as **oc**, must be installed on your local workstation. If you already installed the **oc** utility, you can proceed to [log in to the SNO cluster](#).

1. Click the following link to open a browser window to your ITZ reservations.

[ITZ My reservations](#)

2. Click the **Single Node OpenShift** tile.

The screenshot shows the 'My reservations' section of the IBM Technology Zone interface. On the left, a sidebar lists options like 'My dashboard', 'My created collections', 'My bookmarked searches', 'My favorites', and 'My reservations'. The 'My reservations' option is selected and highlighted with a blue background. The main area displays three environment tiles:

- Single Node OpenShift (VMware on IBM Cloud)**: Status - Ready. This tile is highlighted with a green border around its title and the 'Open this environment' button below it. It shows details: Start date Oct 31, 2024 7:02 AM, End date Nov 6, 2024 6:49 AM, Extend limit 0.
- watsonx Assistant for Z Pilot - AAP & z/OS**: Status - Ready. It shows details: Start date Oct 30, 2024 8:12 AM, End date Nov 5, 2024 7:53 AM, Extend limit 0.
- watsonx Assistant for Z Pilot - watsonx O...**: Status - Ready. It shows details: Start date Oct 30, 2024 8:10 AM, End date Nov 5, 2024 7:12 AM, Extend limit 0.

At the top right of the main area, there are filters for 'Filter by infrastructure' and 'Filter by status', along with icons for 'Custom request', 'Add to calendar', and view modes ('List', 'Grid').

3. Scroll down and record the **Cluster Admin Username** and **Cluster Admin Password**.

5. Enter the **Cluster Admin Username** and **Cluster Admin Password** values from step 3 and click **Log in**.

6. Click the help (?) and then click **Command Line Tools**.

7. Click the link under **oc - OpenShift Command Line Interface (CLI)** for the operating system of your local machine.

Clicking the preceding link automatically downloads either a **.zip** or **.tar** file specific to your operating system. Unzip or untar the file and place the **oc** binary in a directory that is in your default PATH. The PATH will vary by operating system and individual settings, detailed instructions are not provided.

After properly installed, verify the installation by running the **oc** command on your local workstation.

```
oc --help
```

Sample output:

```
andrewjones@Andrews-MBP ~ % oc --help
OpenShift Client

This client helps you develop, build, deploy, and run your applications on any
OpenShift or Kubernetes cluster. It also includes the administrative
commands for managing a cluster under the 'adm' subcommand.

Basic Commands:
  login           Log in to a server
  new-project     Request a new project
  new-app          Create a new application
  status           Show an overview of the current project
  project          Switch to another project
  projects         Display existing projects
  explain          Get documentation for a resource

Build and Deploy Commands:
  rollout          Manage a Kubernetes deployment or OpenShift deployment
  config           Revert part of an application back to a previous deployment
```

Prepare to ingest documents

Before ingesting documents, a few setup steps must be taken.

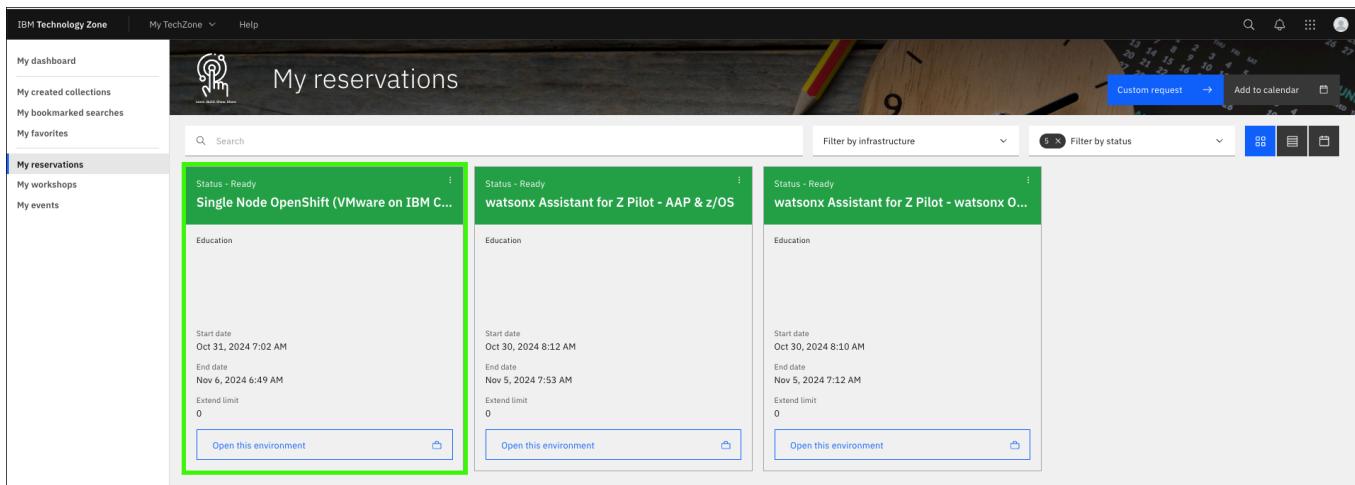

Login to the OpenShift cluster from your local terminal

Note: if you just installed the **oc** utility, you can skip the next 5 steps.

1. Click the following link to open a browser window to your ITZ reservations.

[ITZ My reservations](#)

2. Click the **Single Node OpenShift** tile.

3. Scroll to the bottom of the reservation page and record the **Cluster Admin Username** and **Cluster Admin Password**.

Command Line Tools

[Copy login command](#)

oc - OpenShift Command Line Interface (CLI)

With the OpenShift command line interface, you can create applications and manage OpenShift projects from a terminal.

- [Download oc for Linux for x86_64](#)

7. Click **Display Token**.

8. Select and copy the **Log in with this token** string.

The steps to select and copy the value may differ by operating system, but for most, you can double-click the value and then right click and select **Copy**.

Your API token is
sha256~zuWR0KDnkYniIY0m8g8iKoUXPdFFFmou-o4s5FsrDNA

Log in with this token

```
oc login --token=sha256~zuWR0KDnkYniIY0m8g8iKoUXPdFFFmou-o4s5FsrDNA --server=https://api.672b79320c7a71b728e523b4.ocp.techzone.ir
```

Use this token directly against the API

```
curl -H "Authorization: Bearer sha256~zuWR0KDnkYniIY0m8g8iKoUXPdFFFmou-o4s5FsrDNA" "https://api.672b79320c7a71b728e523b4.ocp.techzone.ir/v1/users/~"
```

Request another token

Logout

9. Open a command prompt or terminal window on your local workstation.

10. Paste the login command and press **enter**.

```
andrewjones@Andrews-MBP ~ % oc login --token=sha256~mJ4L8K6cUMyNyk2Z69KMm3vbP1sWc8SW0eeOdVqtA94 --server=https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443
Logged into "https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443" as "kube:admin" using the token provided.
You have access to 70 projects, the list has been suppressed. You can list all projects with 'oc projects'
Using project "default".
andrewjones@Andrews-MBP ~ %
```

Create a working directory

11. Create a directory that will be used to store the configuration files that will be created in the next steps.

Instructions vary by your local workstation's operating system

The directions that follow may vary depending on your operating system. The examples provided are based upon MacOS.

```
mkdir watsonxAssistant
```

12. Change to the new directory.

```
cd watsonxAssistant
```

```
watsonxAssistant ~ % oc login --token=sha256~mJ4L8K6cUMyNyk2Z69KMm3vbP1sWc8SW0eeOdVqtA94 --server=https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443
Logged into "https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443" as "kube:admin" using the token provided.
You have access to 70 projects, the list has been suppressed. You can list all projects with 'oc projects'
Using project "default".
andrewjones@Andrews-MBP ~ % mkdir watsonxAssistant
andrewjones@Andrews-MBP ~ % cd watsonxAssistant
andrewjones@Andrews-MBP watsonxAssistant %
```

Install IBM Certificate Manager on Red Hat OpenShift

13. Create a file that is named **catalogCertManager.yaml** using a text editor and paste the following text into the file.

Formatting of the yaml file is critical!

The content of the YAML file must be formatted exactly as shown. Use the copy icon to prevent typographical errors.

File name:

```
catalogCertManager.yaml
```

File contents:

```
apiVersion: operators.coreos.com/v1alpha1
kind: CatalogSource
metadata:
  name: ibm-cert-manager-catalog
  namespace: openshift-marketplace
spec:
  displayName: ibm-cert-manager-4.2.7
  grpcPodConfig:
    securityContextConfig: restricted
  image: icr.io/cpopen/ibm-cert-manager-operator-
catalog@sha256:4dcf4ace4b5f166f83b31063f7e6404dbf78d8e98a9d4fcf52fedf576a55ca6c
  publisher: IBM
  sourceType: grpc
  updateStrategy:
    registryPoll:
      interval: 30m0s
```

14. Install the IBM Certificate Manager operator in the Red Hat OpenShift cluster.

```
oc apply -f catalogCertManager.yaml
```

The preceding command returns a message that states the **ibm-cert-manager-catalog** was created.

15. In the OpenShift web console, click **Operators** and select **OperatorHub**.

The screenshot shows the Red Hat OpenShift web console interface. The left sidebar has a 'Operators' menu with 'OperatorHub' selected, indicated by a green box. The main content area is titled 'Command Line Tools' and contains information about the 'oc' command-line interface, including download links for various platforms. The top navigation bar shows the user is logged in as 'kube:admin'.

16. Click the **Project** to pull-down menu and click the **Show default projects** toggle.

The screenshot shows the Red Hat OpenShift web console interface. The left sidebar has a 'Project' dropdown menu open, with 'All Projects' selected. A green box highlights the 'Show default projects' toggle switch. The main content area shows a list of projects: 'All Projects', 'default', 'kube-node-lease', and 'kube-public'. A tooltip for the toggle switch explains that partners can purchase software through Red Hat Marketplace. The top navigation bar shows the user is logged in as 'kube:admin'.

17. Scroll down and select **openshift-marketplace**.

You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.

18. Enter IBM Cert Manager in the search field and then click the IBM Cert Manager tile.

Be patient.

It may take a minute or two for the IBM Cert Manager tile to appear.

You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.

Project: openshift-marketplace

Discover Operators from the Kubernetes community and Red Hat partners, curated by Red Hat. You can purchase commercial software through Red Hat Marketplace. You can install Operators on your clusters to provide optional add-ons and shared services to your developers. After installation, the Operator capabilities will appear in the Developer Catalog providing a self-service experience.

All Items All Items

Q: IBM Cert Manager X

ibm-cert-manager-4.2.7

IBM Cert Manager
provided by IBM
Operator for managing deployment of cert-manager service.

1 items

19. Click Install.

The screenshot shows the Red Hat OpenShift on IBM Techzone interface. The left sidebar is the OperatorHub, with 'OperatorHub' selected. In the center, a search bar finds 'ibm-cert-manager'. On the right, the 'ibm-cert-manager-4.2.7' entry is displayed with its details. A large green box highlights the 'Install' button at the top of the right panel.

20. Keep the default settings and click **Install**.

The screenshot shows the 'Install Operator' configuration page. It includes fields for 'Update channel' (v4.2), 'Version' (4.2.7), and 'Installation mode' (set to 'All namespaces on the cluster (default)'). Below these are sections for 'Installed Namespace' (operator recommended namespace 'ibm-cert-manager' is selected) and 'Update approval' (set to 'Automatic'). At the bottom are 'Install' and 'Cancel' buttons, with the 'Install' button highlighted by a green box.

The installation process takes a few minutes. Do not continue until you see the message: **Installed operator: ready for use.**

The screenshot shows the Red Hat OpenShift OperatorHub interface. On the left, a sidebar menu includes 'Administrator', 'Home', 'Operators' (selected), 'OperatorHub' (highlighted in blue), 'Installed Operators', 'Workloads', 'Networking', 'Storage', 'Builds', 'Observe', 'Compute', 'User Management', and 'Administration'. The main content area displays the 'IBM Cert Manager' operator card, which is highlighted with a green dashed border. The card shows the operator icon, name, version ('v4.2.7'), provider ('ibm'), and status ('Installed operator: ready for use'). Buttons for 'View Operator' and 'View installed Operators in Namespace ibm-cert-manager' are visible.

Install the watsonx Assistant for Z Operator (for OpenSearch)

- In your command prompt or terminal window, create a new namespace called **wxa4z-byos** in the Red Hat OpenShift cluster.

```
oc create namespace wxa4z-byos
```

- Create or obtain your IBM Container Software **production entitlement key**.

A **production entitlement key** is required to pull the container images that get deployed by the operator.

To create this key, follow the [instructions here](#) to create or retrieve your existing entitlement key.

After locating your existing key or creating a new key, continue to the next step.

- Copy the **production entitlement key**.

The screenshot shows the IBM Container Software and Cloud Pak Access Management interface. The left sidebar has links for 'My IBM', 'Profile', 'Billing', 'Entitlement keys' (selected), and 'Container software library'. The main content area is titled 'Entitlement keys (1)'. It explains that an entitlement key allows access to all container software in the IBM Entitled Registry. It shows an 'Active entitlement keys' section with a note about a maximum of 5 keys and a 'Copy' button. At the bottom, it shows the issue date ('October 17, 2022') and provides 'Copy' and 'Delete' buttons for the key details.

24. Using the following command in your command prompt or terminal window, set an environment variable with your **production entitlement key** and then create a pull secret for the Container Registry.

Substitute your **production entitlement key** for the <entitlement key> string.

```
export IBM_CS_ENT_KEY=<entitlement key>
```

```
oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --  
docker-username=cp --docker-password=$IBM_CS_ENT_KEY
```

The screenshot shows a terminal session on a Mac OS X system (Andrews-MBP). It starts with creating a namespace named 'wxa4z-byos'. Then, it runs a command to export the environment variable \$IBM_CS_ENT_KEY. Finally, it creates a 'pull-secret' named 'icr-pull-secret' in the same namespace, which is highlighted with a green box. The command used is 'oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --docker-username=cp --docker-password=\$IBM_CS_ENT_KEY'. The output shows the secret was created successfully.

```
andrewjones@Andrews-MBP watsonxAssistant % oc create namespace wxa4z-byos  
namespace/wxa4z-byos created  
andrewjones@Andrews-MBP watsonxAssistant % export IBM_CS_ENT_KEY=  
andrewjones@Andrews-MBP watsonxAssistant % oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --  
docker-username=cp --docker-password=$IBM_CS_ENT_KEY  
secret/icr-pull-secret created.  
andrewjones@Andrews-MBP watsonxAssistant %
```

25. Create a file called **catalogSource.yaml** with the following content.

Formatting of the yaml file is critical!

The content of YAML files must be formatted exactly as shown. Use the copy icon to prevent typographical errors.

File name:

```
catalogSource.yaml
```

File contents:

```
apiVersion: operators.coreos.com/v1alpha1
kind: CatalogSource
metadata:
  name: ibm-wxa4z-operator-catalog
  namespace: wxa4z-byos
spec:
  displayName: "IBM Watsonx Assistant for Z Operator Catalog"
  image: icr.io/cpopen/ibm-wxa4z-
  catalog: 2.0.2@sha256:d457aa24af07c23d7b36727a9cff95995ca1c4ed49fb980ef4f386fd09a29b4
  publisher: 'IBM'
  sourceType: grpc
  secrets:
  - icr-pull-secret
```

26. Create your document catalog in the Red Hat OpenShift operator.

```
oc apply -f catalogSource.yaml
```

```
watsonxAssistant - cecuser@p1365-pvml:~ - zsh - 135x37
andrewjones@Andrews-MBP watsonxAssistant % oc create namespace wxa4z-byos
namespace/wxa4z-byos created

andrewjones@Andrews-MBP watsonxAssistant %
```

27. In the Red Hat OpenShift web console, click **OperatorHub** and select the **wxa4z-byos** project.

28. Enter **ibm watsonx** in the search field and the click the **IBM watsonx Assistant for Z Operator Catalog** tile.

29. Click **Install**.

You are logged in as a temporary administrator.

Project: wxa4z-byos

OperatorHub

Discover Operators from the Kubernetes community and Red Hat partners, curated by Red Hat. You can purchase services to your developers. After installation, the Operator capabilities will appear in the [Developer Catalog](#) provided by IBM.

30. Select A specific namespace on the cluster under **Installation mode** and **wxa4z-byos** for the **Installed Namespace**, then click **Install**.

You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.

OperatorHub > Operator Installation

Install Operator

Install your Operator by subscribing to one of the update channels to keep the Operator up to date. The strategy determines either manual or automatic updates.

Update channel * stable

Version * 2.0.1

Installation mode *

- All namespaces on the cluster (default)
Operator will be available in all Namespaces.
- A specific namespace on the cluster
Operator will be available in a single Namespace only.

Installed Namespace * wxa4z-byos

Update approval * Automatic

Provided APIs

BYOS BYOSearch

Not available

Install Cancel

The installation process takes a few minutes. Do not continue until you see the message: **Installed operator: ready for use.**

31. In your command prompt or terminal window, run the following commands to add the Container Registry credential to the operator's service account.

```
oc project wxa4z-byos
```

```
oc patch serviceaccount ibm-wxa4z-operator-controller-manager --type merge -p
'{"imagePullSecrets": [{"name": "icr-pull-secret"}]}'
```

```
andrewjones@Andrews-MBP watsonxAssistant % oc create namespace wxa4z-byos

```

Deploy required secrets and the custom bring-your-own-search (BYOSearch) resource

35. Create a file called **os-secret.yaml** with the following content.

File name:

```
os-secret.yaml
```

Substitute a secure password of your choosing for the string <OPENSEARCH_PASSWORD>.

File contents:

```
apiVersion: v1
stringData:
  password: <OPENSEARCH_PASSWORD>
kind: Secret
metadata:
  name: opensearch-creds
  namespace: wxa4z-byos
  type: Opaque
```

36. Create the secret by running the following command.

```
oc apply -f os-secret.yaml
```

37. Create a file called **client-ingestion-secret.yaml** with the following content.

File name:

```
client-ingestion-secret.yaml
```

Substitute a secure authentication key of your choosing for the string <CLIENT_INGESTION_AUTHKEY>. The authentication key can be a random password.

File contents:

```
apiVersion: v1
stringData:
  authkey: <CLIENT_INGESTION_AUTHKEY>
kind: Secret
metadata:
  name: client-ingestion-authkey
  namespace: wxa4z-byos
  type: Opaque
```

38. Create the secret by running the following command.

```
oc apply -f client-ingestion-secret.yaml
```

39. Obtain and record your cluster domain that is used for routes by running the following command.

```
oc -n openshift-ingress-operator get ingresscontroller default -o jsonpath=".status.domain"
```

Remove the trailing % from the cluster domain name.

The value returned for the cluster domain may include a % character at the end. Do not include the % in the next step!

Note, the output of the command will be a string similar to:

apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com

40. Create a file called **byos.yaml** with the following content.

File name:

```
byos.yaml
```

Substitute the domain name recorded in the previous step for the string <YOUR_CLUSTER_DOMAIN>. Do not include the % at the end of the domain name.

File contents:

```

apiVersion: wxa4z.watsonx.ibm.com/v1
kind: BYOSearch
metadata:
  name: byosearch
  namespace: wxa4z-byos
spec:
  imagePullSecrets:
    - name : icr-pull-secret
  namespace: wxa4z-byos
  clusterName: wxa4z-byos-cluster
  clusterDomain: <YOUR_CLUSTER_DOMAIN>

  opensearch:
    secretName: opensearch-creds

  persistence:
    enabled: true
    storageClass: "managed-nfs-storage"
    accessModes:
      - ReadWriteOnce
    size: 24Gi

  wrapper:
    createRoute: true
    resources:
      requests:
        cpu: 4
        memory: "500Mi"
      limits:
        cpu: 4
        memory: "1Gi"

  clientIngestion:
    secretName: client-ingestion-authkey

    resources:
      limits:
        cpu: "500m"
        memory: 2Gi
        nvidia.com/gpu: "0"
      requests:
        cpu: "500m"
        memory: 1Gi
        nvidia.com/gpu: "0"
    pvc:
      storageClass: "managed-nfs-storage"
      enabled: true
      size: 24Gi

```

41. Run the following command to deploy BYOS on your cluster.

```
oc apply -f byos.yaml
```

The BYOS deployment begins and might take up to 20 minutes or more for the images to download and the deployment to complete. You can check the status by looking at the Pods view in the OCP console.

Verify all the required pods are running

42. Verify that all pods have the status of **Running** or **Completed**.

Name	Status	Ready	Restarts	Owner	Memory	CPU	Created
da80909aab1563ff0c15b7c6d	Completed	0/1	0	da80909aab1563ff0c15b7c6da81 a8bfefabaa605065bb6c6b490e87 0e87f0k96l	-	-	Nov 6, 2024, 9:26 AM

wxa4z-snapshot-setup-job-nsqlz	Completed	0/1	0	wxa4z-snapshot-setup-job	-	-	Nov 6, 2024, 10:22 AM

44. Copy and record the location for the **wxa4z-opensearch-wrapper** route.

Name	Status	Location	Service
wxa4z-client-ingestion	Accepted	https://wxa4z-client-ingestion-wxa4z-byos.apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com	wxa4z-client-ingestion
wxa4z-opensearch-wrapper	Accepted	https://wxa4z-opensearch-wrapper-wxa4z-byos.apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com	wxa4z-opensearch-wrapper

Update your assistant with the new BYOS search instance

Configure your assistant with the route recorded in the previous step.

Using the route recorded in Step 44, append the string `/v1/query` to complete the URL endpoint. The URL should look similar to:

https://wxa4z-opensearch-wrapper-wxa4z-byos.apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com/v1/query

Note: the above URL will not work for you. Use the value of your specific OpenSearch instance that is recorded in the previous step.

Next, you need to return to your assistant in the watsonx Orchestrate AI assistant builder and update the custom search integration URL. The steps to update the URL are illustrated in the animated gif that follows. You can see the steps [here](#).

The screenshot shows the Red Hat OpenShift console interface. The left sidebar is titled "Red Hat OpenShift on IBM Techzone" and includes sections for Operators, Workloads (Pods, Deployments, DeploymentConfigs, StatefulSets, Secrets, ConfigMaps), CronJobs, Jobs, DaemonSets, ReplicaSets, ReplicationControllers, HorizontalPodAutoscalers, and PodDisruptionBudgets. The "Networking" section is expanded, showing Services, Routes (which is selected), Ingresses, and NetworkPolicies. The main content area is titled "Routes" and shows two routes for the "wxa4z-byos" project. The first route, "wxa4z-client-ingestion", has a status of "Accepted" and a location URL of "https://wxa4z-client-ingestion-wxa4z-byos.apps.672b79320c7a7lb728e523b4.ocp.techzone.ibm.com". The second route, "wxa4z-opensearch-wrapper", also has a status of "Accepted" and a location URL of "https://wxa4z-opensearch-wrapper-wxa4z-byos.apps.672b79320c7a7lb728e523b4.ocp.techzone.ibm.com". A yellow circle highlights the "Copy to clipboard" button next to the location URL of the first route.

Troubleshooting

The following are issues that you may encounter. If the provided resolutions do not work, contact support by using the methods that are mentioned in the [Support](#) section.

✖ Pods have a status of ErrImagePull or ImagePullBackoff

If the pods starting with **ibm-wxa4z-operator** have a status of “ErrImagePull” or “ImagePullBackoff”, you can delete the pod and it will automatically restart and pull the image successfully. Wait until the pod is re-created successfully.

✖ The wxa4z-client-ingestion pod does not start

Did you include the % character in the **clusterDomain** name when creating the **byos.yaml**? To resolve, edit the **byos.yaml** file and run the following command again. The current pod will be terminated and a new one started. This will take about 20 minutes to start.

```
oc apply -f byos.yaml
```

Installing and using zassist to ingest client documents

With bring-your-own-search (BYOS) installed and configured in your assistant, you can now prepare for document ingestion. Currently, only PDF, HTML, and DOCX file formats are supported for ingestion.

To prepare for document ingestion, you can also reference the setup instructions that are located [here](#).

Install the zassist utility

The **zassist** utility is an executable program that automates the ingestion of client documentation into the RAG for watsonx Assistant for Z. The utility is available to clients through [IBM Passport Advantage](#).

A version of zassist is available for download for IBMers and Business Partners for conducting pilots. Follow the steps that follow to download and install **zassist**.

1. Click the following link and download the **zassist.zip** file.

<https://ibm.box.com/s/j3nt5iw4fqd5w2jgcqwxnjlsu8bpvl77>

The screenshot shows a file browser interface for Box@IBM. At the top, there's a header with 'Box@IBM' and a search bar. Below the header, a folder named 'zassist.zip' is displayed. Inside this folder, there is a single item named 'zassist'. In the top right corner of the browser, there are several buttons: three dots, 'Download' (which is highlighted with a green box), and 'Account'. The main area shows a table with columns for Name, Modified, and Size.

Name	Modified	Size
zassist	Sep 5 at 9:15 AM	--

2. Extract the **zassist.zip** file.

3. Locate the appropriate file for your local workstation's operating system.

The screenshot shows a file browser interface for Watsonx Assistant. The title bar says 'watsonxAssistant'. The main area displays a file tree under the 'zassist' folder. The 'zassist' folder itself is highlighted with a green box. Inside 'zassist', there are subfolders for 'linux', 'mac', and 'windows', each with its own 'zassist' file. A 'zassist.zip' file is also present in the root 'zassist' folder. The file tree has a dashed green border around the entire 'zassist' folder and its contents. The columns in the file list are 'Name', 'Date Modified', 'Size', and 'Kind'.

Name	Date Modified	Size	Kind
byos.yaml	Today at 12:17 PM	956 bytes	YAML
ca.crt	Today at 11:36 AM	Zero bytes	certificate
catalogCertManager.yaml	Today at 9:15 AM	476 bytes	YAML
catalogSource.yaml	Today at 9:25 AM	397 bytes	YAML
client-ingestion-secret.yaml	Today at 10:05 AM	155 bytes	YAML
os-secret.yaml	Today at 10:04 AM	149 bytes	YAML
zassist	Sep 5, 2024 at 11:15 AM	--	Folder
linux	Sep 18, 2024 at 8:15 AM	--	Folder
mac	Sep 18, 2024 at 8:15 AM	--	Folder
zassist	Sep 18, 2024 at 8:17 AM	10.2 MB	Unix Executable File
mac-arm	Sep 18, 2024 at 8:15 AM	--	Folder
windows	Sep 18, 2024 at 8:15 AM	--	Folder
zassist.zip	Today at 1:47 PM	23 MB	ZIP archive

4. Either copy the appropriate **zassist** file to a directory in your PATH, or copy it to a directory and add that directory to your PATH environment variable.

Additional information for running the preceding tasks can be found [here](#).

5. Verify that the **zassist** utility is working.

```
andrewjones@Andrews-MacBook-Pro watsonxAssistant % PATH=$PATH:.
andrewjones@Andrews-MacBook-Pro watsonxAssistant % zassist
zassist: error: expected one of "version", "init", "login", "ingest", "load", ...
andrewjones@Andrews-MacBook-Pro watsonxAssistant %
```

Ingest client documentation using **zassist**

With the **zassist** command installed, you are now able to begin ingesting data.

Step-by-step guidance for ingesting documents using zassist are provided in the IBM watsonx Assistant for Z documentation. In the directions, when running the log in command in step 7, use the **CLIENT_INGESTION_AUTHKEY** you created in the [previous section](#).

6. Follow the directions [here](#) to ingest documents using zassist.

These steps are not repeated in this lab guide. The following video illustrates the steps to ingest a single document. This video has no audio.

Don't see the video in the PDF version of the lab guide?

If you are viewing the [PDF](#) of the lab guide, you can access the video [here](#).

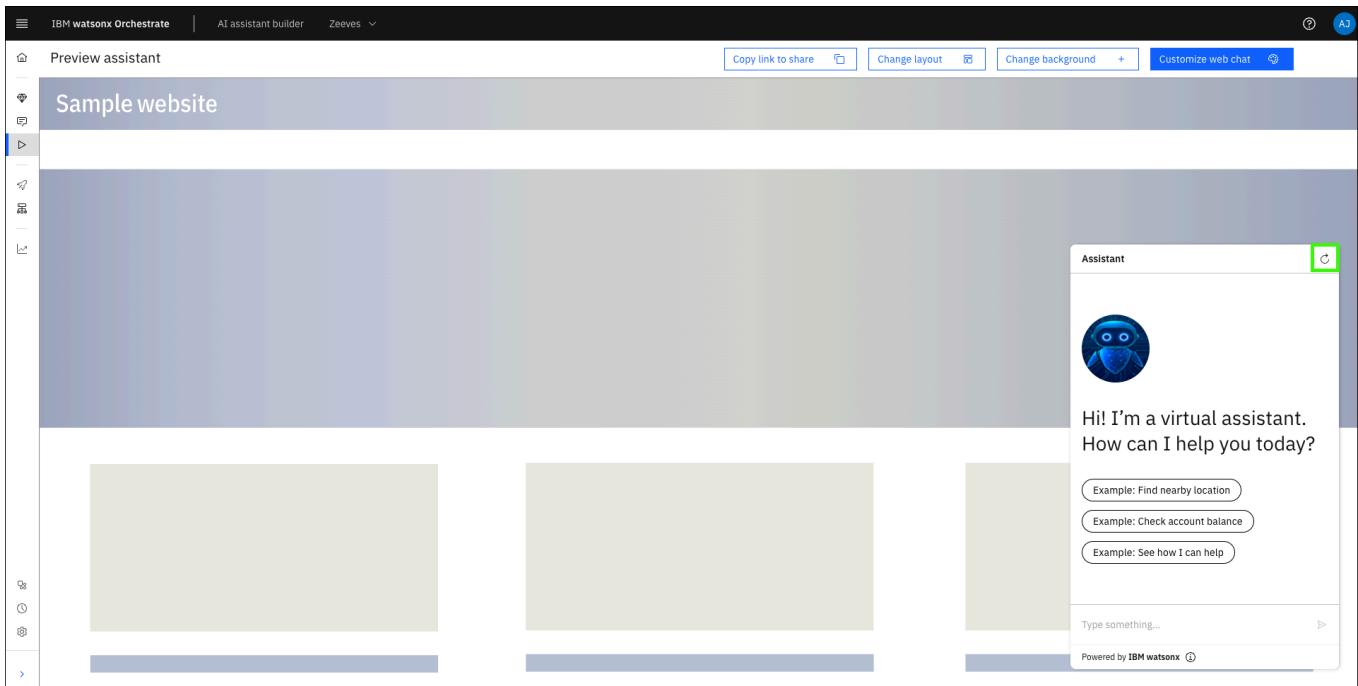

The document that is ingested in the video is a compressed [PDF](#) of the **IBM z/OS Continuous Delivery Red Piece**. You can download a copy of this document [here](#).

Verify the document that is ingested is now returned as a source file for a query.

Use the watsonx Orchestrate AI assistant builder to verify your document ingestion.

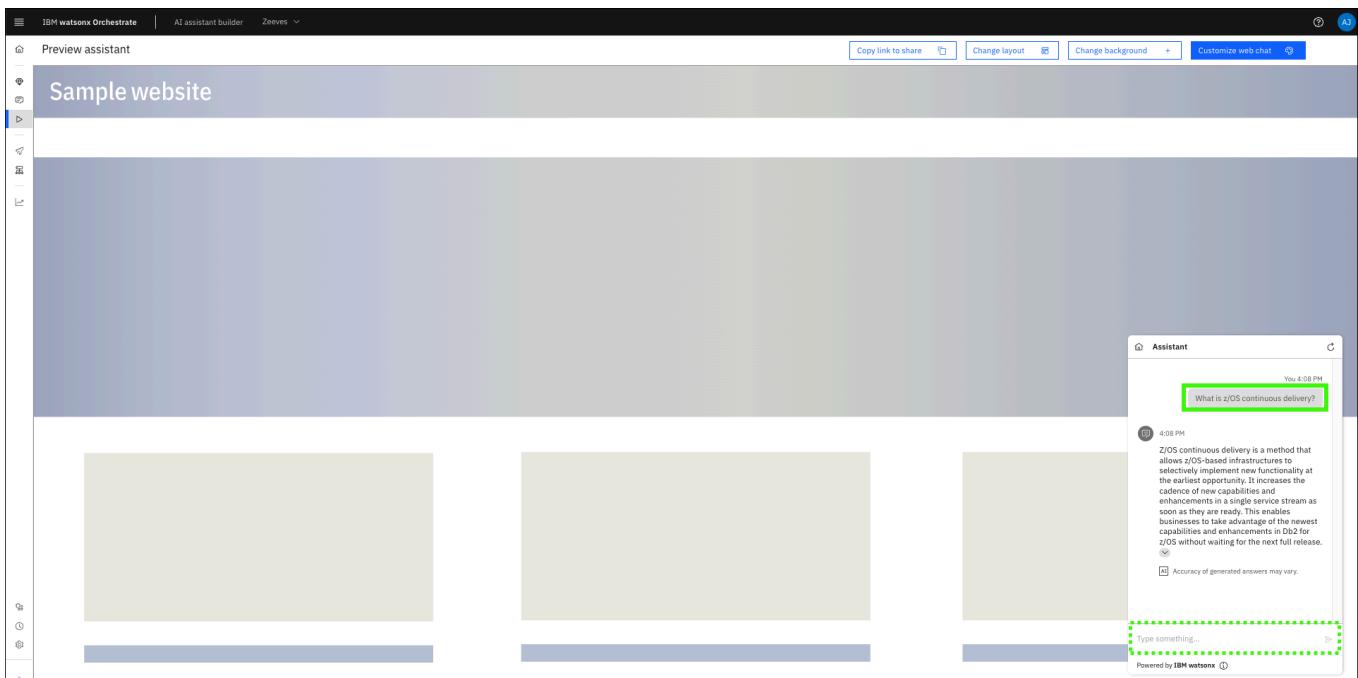

7. Hover over the home () icon and click **Preview**.

8. Click the **Restart conversation** () icon.

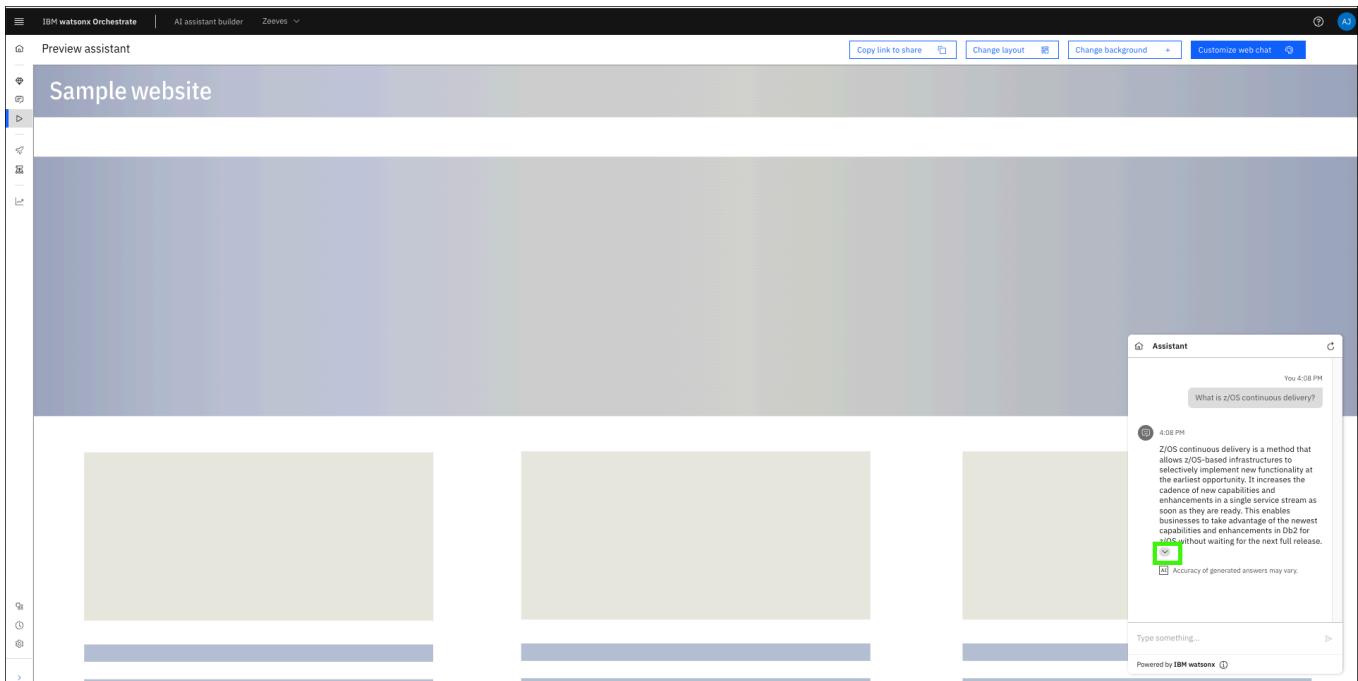

9. Enter the following prompt in your assistant.

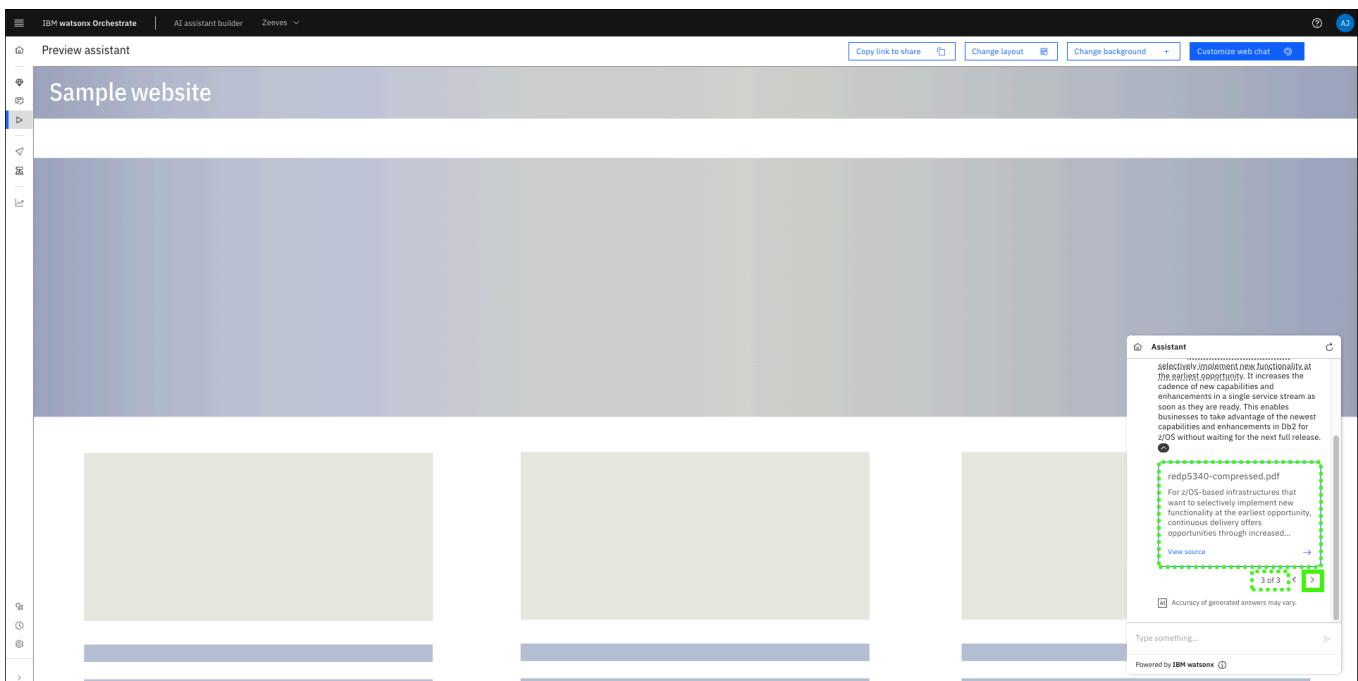

What is z/OS continuous delivery?

10. Expand the sources section by clicking the (▼).

11. Click through the list of resources and find the reference to the Red Piece document you ingested.

12. Click the ingested document reference.

13. Accept the security risk to view the source document.

The steps to accept the security risk for the document are not shown. The risk occurs because the certificate for the connection to the SNO instance is not secure. Notice that the URL contains the path to your SNO instance route.

Adjusting the search behavior

Do you recall the **Metadata** field when you configured your assistant?

The screenshot shows the 'Custom service' configuration page in the AI assistant builder. The 'Metadata' field is highlighted with a green dashed box. The JSON example provided is:

```
{
  "example_field": "example_value",
  "other_example_field": 7
}
```

The Metadata field provides a way to adjust your assistant's behavior during conversational search for your OpenSearch instance. Now that you have your own docs that are ingested for conversational search, you can set the metadata field for your assistant to use those documents in its content-grounded search. If you leave the metadata field empty, then it defaults to settings found to perform well. This replaces having to paste a complicated search string. By default (without any string in the Metadata field), it searches all the default IBM provided documentation and all ingested customer documentation using the following value:

```
{"ibm_indices": "*_ibm_docs_slate",
"customer_indices": "customer_*"}
```

Replacing the wildcard string with an explicit list of indices allows personalization. The metadata setting is where you can input specific indices (pointing to the underlying documentation) that you want your assistant to use for the content-grounded search. Out of the box there are over 220 products and topics that the OpenSearch instance has IBM Documentation for. You can find those indices and products [here](#).

You can input a subset of indices into the “Metadata” field in cases where you only want your assistant to gather context for specific IBM products or topics. The specific indices can be listed out in this format:

```
{"ibm_indices": "<comma separated index values>", "customer_indices": "customer_*"}
```

For example, if you only want your assistant to reference documentation for “Db2 Analytics Accelerator for z/OS” and no ingested client documentation, you can enter the following into the metadata field:

```
{"ibm_indices": "ss4lq8_ibm_docs_slate"}
```

If you have a mix of IBM Documentation and client documentation ingested, then there's an optional search string that you can use to set the “weights” used for each.

For example:

```
{"doc_weight":  
{"product_docs":0.5,  
 "customer_docs":0.5},  
"ibm_indices":"*_ibm_docs_slate",  
"customer_indices":"customer_*"  
}
```

In this case, “product_docs” is the weight that is assigned to “ibm_indices” and “customer_docs” is the weight that is assigned to “customer_indices”.

After you have configured all the settings for Conversational Search on the page, click “Save” in the upper-right of the page.

For more information on customizing the metadata field for conversational search, refer to this supplemental video found here.

You are encouraged to experiment with the metadata field!

Try setting the metadata field to the following, which weights ingested docs higher than the product docs:

```
{"doc_weight":  
{"product_docs":0.2,  
 "customer_docs":0.8},  
"ibm_indices":"*_ibm_docs_slate",  
"customer_indices":"customer_*"  
}
```

Now, repeat steps 6 through 8 (make sure you restart the assistant preview (⟳)). Notice that the ingested Red Piece document is now the first sited reference!

The screenshot shows the IBM Watsonx Orchestrate interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', and 'Zeeves'. Below the navigation is a toolbar with 'Preview assistant', 'Copy link to share', 'Change layout', 'Change background', and 'Customize web chat'. The main workspace is titled 'Sample website' and contains three large, blurred rectangular cards. To the right, an 'Assistant' panel is open, displaying a message from 'Zeeves' at 4:30 PM. The message content is as follows:

Z/OS continuous delivery is a model that provides the availability of new functionality in z/OS-based infrastructures. It allows for selective implementation of new functionality at the system level. This model uses small programming enhancements (SPEEs) to deliver functionality and offers functionality rollback in certain cases.

redp5340-compressed.pdf
For z/OS-based infrastructures that want to selectively implement new functionality at the system level, continuous delivery offers opportunities through increased...

Guidance for the pilot environment

If you or your client have other documents to ingest, you can do so by repeating the steps using zassist. The Velocity Pilot ITZ environment is limited in compute and storage capacity. The following limits should be adhered to:

- Greater than 15,000 documents is not supported.
- Individual documents should be less than 10 megabytes (MB).
- Larger documents greater than 50 MB should work if the document contains mostly images.
- Loading documents can take a long time, especially with > 100 MB of text.
- It is recommended to run large loads late at night.
- When loading, ensure your workstations does not sleep during the process.
- If you receive a **batch time error**, set the batch size to a lower number for that command. For example:

```
zassist ingest . -s 50
```

After ingesting all the your additional documents, proceed to the next section to learn about adding skills to your assistant.

Adding skills to the assistant

Getting started with skills and actions

Watsonx Assistant for Z can import skills to automate a range of IBM Z related tasks through assistant interactions. Each skill is a pre-defined automation that runs tasks to accomplish some unit or units of work. For example, you can use a skill to view z/OS IPL information, or work with z/OS datasets.

IBM Watsonx Assistant for Z provides an extension within Watsonx Orchestrate to build new skills from Ansible Automation platform or z/OS Management Facility (z/OSMF). The Z Skills Accelerator extension connects Ansible and z/OS application programming interfaces (APIs) and can import automation as Ansible Playbooks, JCL, or REXX as skills. Learn more importing and building skills [here](#).

Environments

Watsonx Orchestrate

The Z Skills Accelerator extension is already configured in your Watsonx Orchestrate IBM Technology Zone (ITZ) environment. You can use this component to import new skills.

Ansible Automation Platform and Wazi as a Service

To import skills for automations, you use Ansible Automation Platform (AAP) and Wazi as a Service (Wazi aaS) to serve as the z/OS back-end. Learn more about AAP [here](#). Learn more about Wazi, [here](#).

The two resources are provisioned together in the ITZ environment that you reserved earlier. This environment enables the ability to manage and automate z/OS tasks and subsystems with various preinstalled ansible playbooks. It includes a z/OS back-end (Wazi as a Service) with all needed prerequisites.

The playbooks provided cover various use cases for automating z/OS management. Ansible's capabilities for automating various Z-specific tasks are not limited to the use cases that are preinstalled in the AAP instance. The preinstalled playbooks are tasks from the 'IBM z/OS core collection'. Using this environment accelerates the ability to showcase the value of Watsonx Assistant for Z, and to get started with simple automations that can be expanded.

The ITZ environment gives you access to AAP, which is preconfigured to target the accompanying z/OS Wazi system, along with web-based access to AAP to experiment with different playbook templates. These templates are imported into Watsonx Orchestrate as skills and connected to your assistant.

For more information on the AAP and Wazi z/OS environments, refer to this document.

The playbook templates that are preinstalled in AAP cover various use cases, which you can explore, including:

- z/OS Certificate Management (create, delete, list, and renew certificates)
- dataset management (create, delete, fetch datasets)
- Submit JCL
- Run Operator commands

- Run TSO commands
- And more

Each of the sections that follow build upon each other. Complete each to successfully enhance your assistant by starting with [Explore Ansible Automation Platform](#).

Explore Ansible Automation Platform

After you reserved the Ansible Automation Platform (AAP) and Wazi z/OS environment in IBM Technology Zone (ITZ) and the reservation is in the **Ready** state, follow these steps to explore AAP.

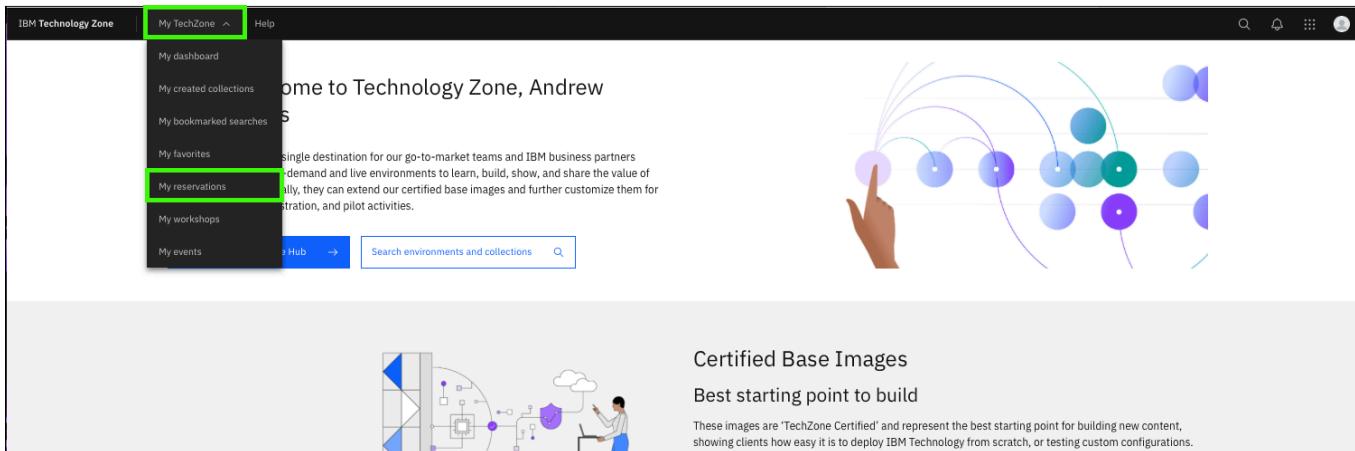

Access the AAP and Wazi as a Service environment

Be sure to record the information as instructed

Several of the steps below instruct you to record values from your ITZ reservation. Be sure to do this as they will not only be used in this section, but also in later sections of the lab guide.

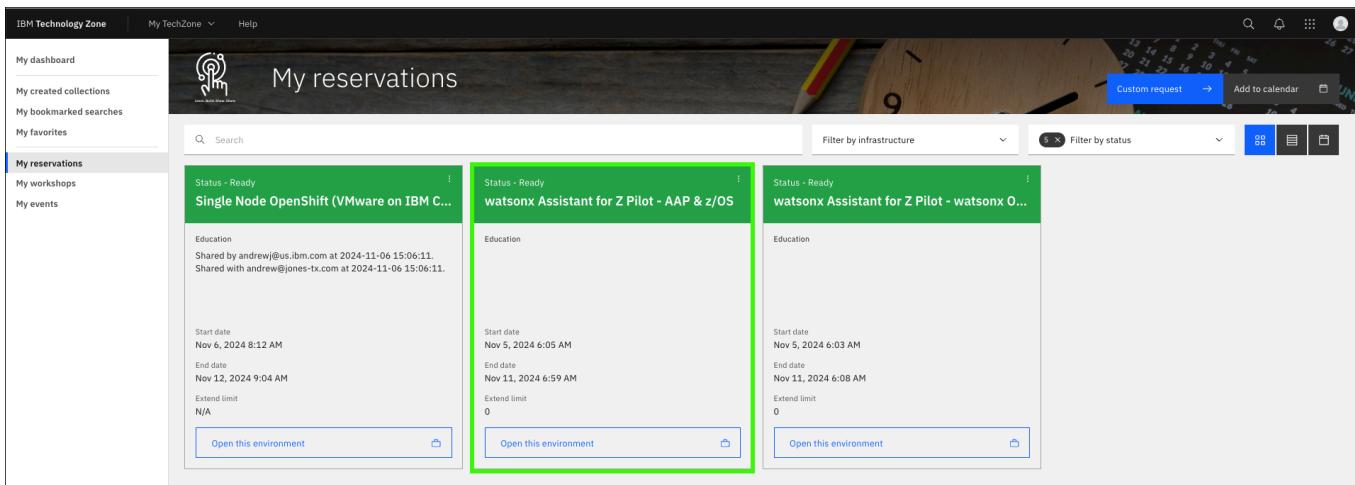

1. In the IBM Technology Zone portal, expand **My TechZone** and select **My Reservations**, or click the following link.

[ITZ My reservations](#)

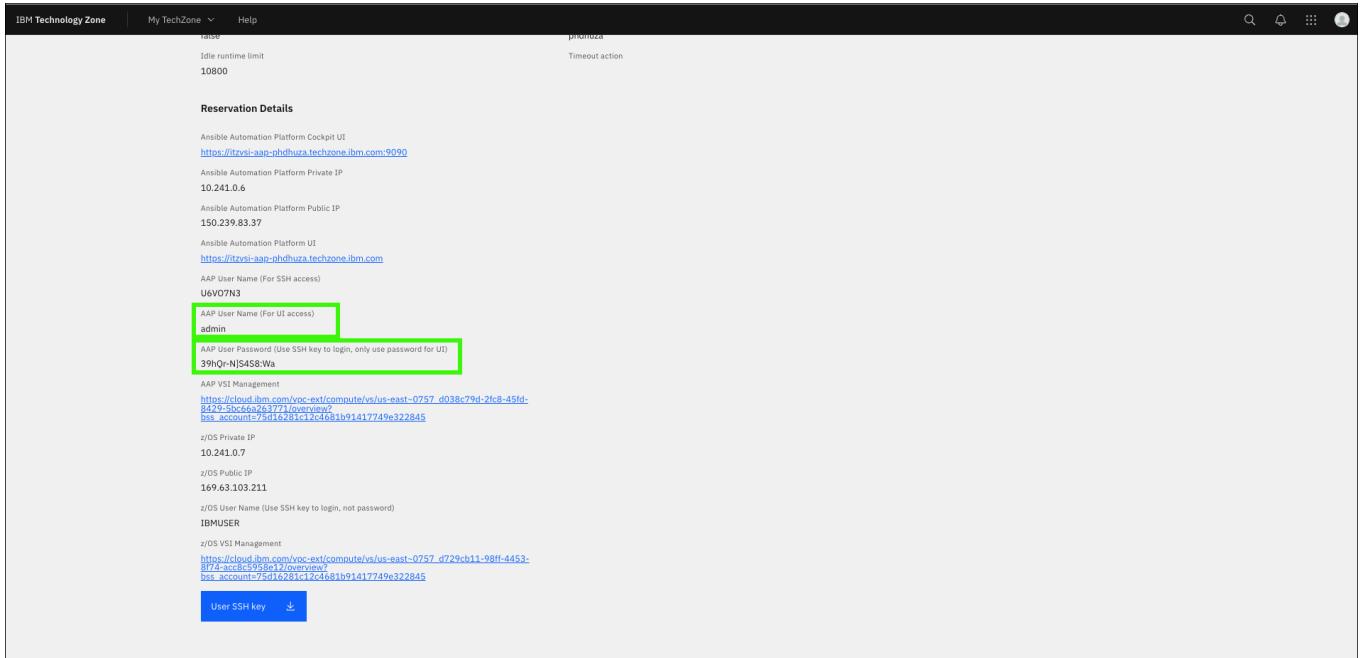

Certified Base Images
Best starting point to build
These images are "TechZone Certified" and represent the best starting point for building new content, showing clients how easy it is to deploy IBM Technology from scratch, or testing custom configurations.

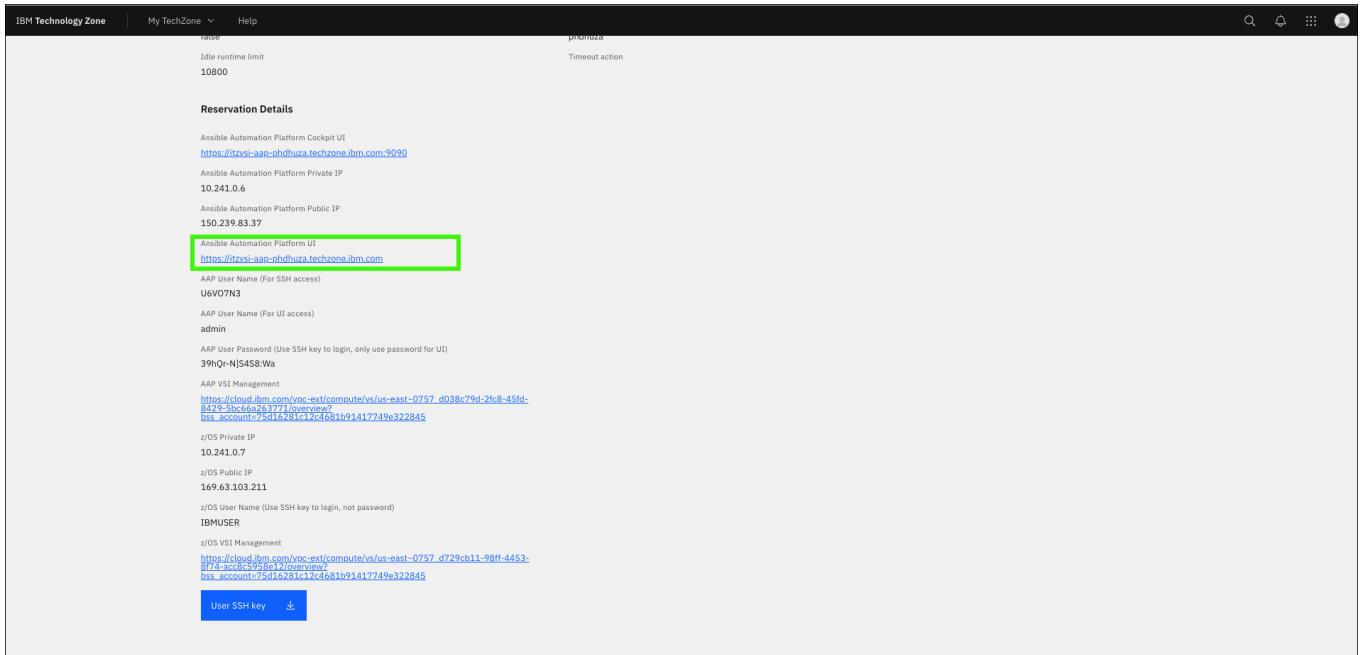

2. Click the **watsonx Assistant for Z Pilot - AAP & z/OS** tile.

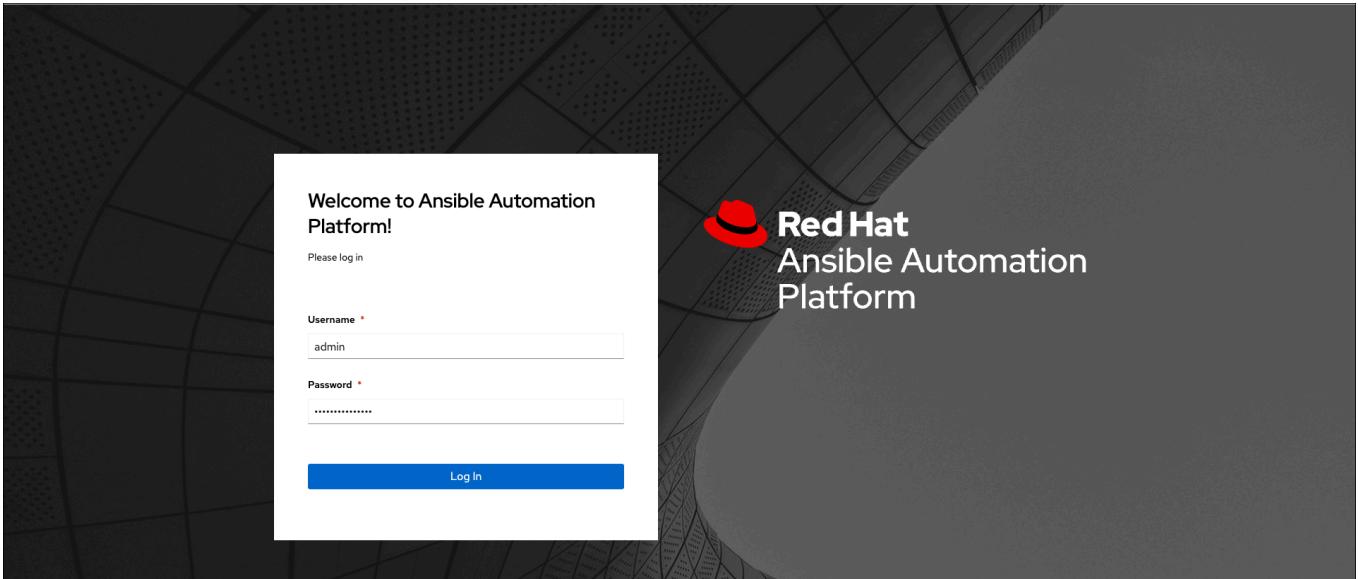

3. Locate and record the **AAP User Name (For UI access)** and **AAP User Password** fields.

4. Record and then click the Ansible Automation Platform UI link.

5. Enter the **Username** and **Password** that is recorded in step 3 and click **Log In**.

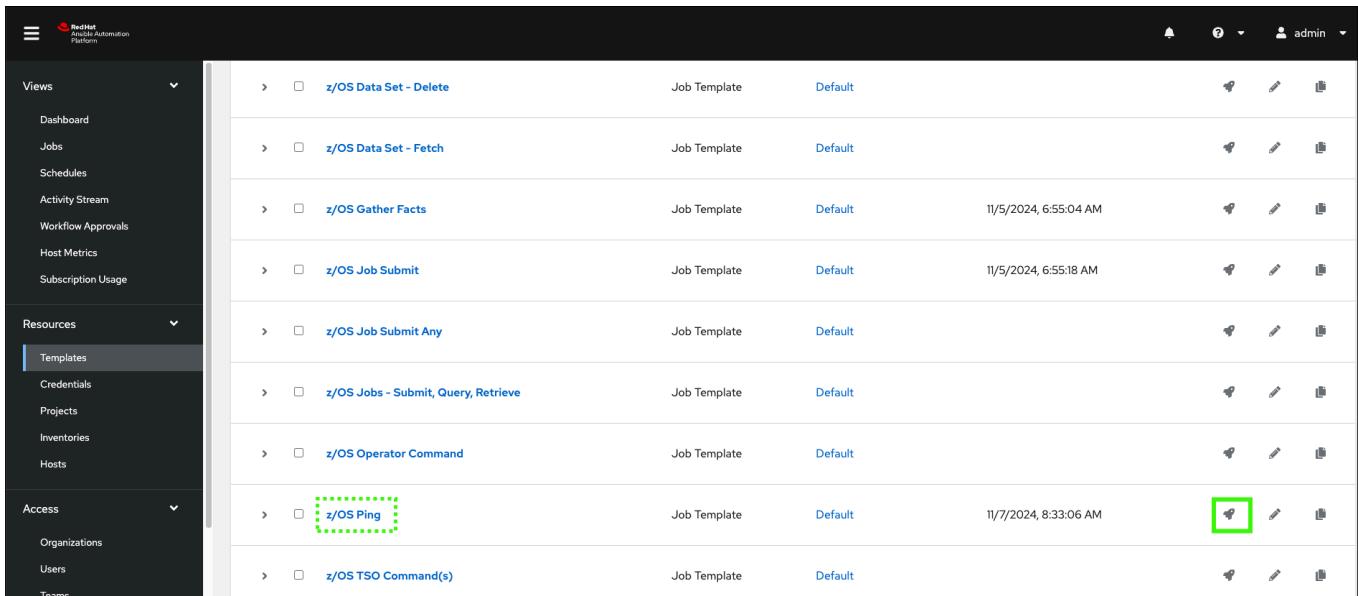

6. Click **Templates** under the **Resources** section.

The AAP instance is preconfigured to the Wazi aaS instance

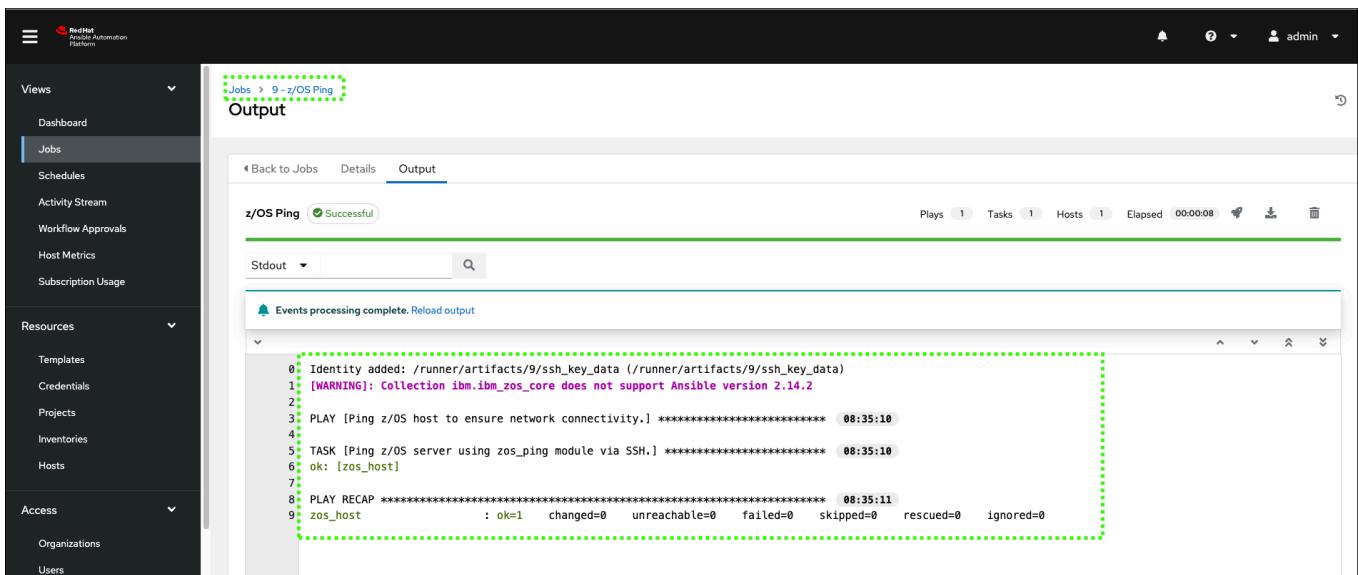

Note that because the AAP instance and the back-end z/OS system are preconfigured, no changes are needed to execute the templates and they will target your provisioned z/OS system by default.

7. Locate the **z/OS Ping** template and click the rocket (🚀) icon to start the template.

Views	z/OS Data Set - Delete	Job Template	Default			
Dashboard	z/OS Data Set - Fetch	Job Template	Default			
Schedules	z/OS Gather Facts	Job Template	Default	1/5/2024, 6:55:04 AM		
Activity Stream	z/OS Job Submit	Job Template	Default	1/5/2024, 6:55:18 AM		
Workflow Approvals	z/OS Job Submit Any	Job Template	Default			
Host Metrics	z/OS Jobs - Submit, Query, Retrieve	Job Template	Default			
Subscription Usage	z/OS Operator Command	Job Template	Default			
Resources	z/OS Ping	Job Template	Default	1/7/2024, 8:33:06 AM		
Access	z/OS TSO Command(s)	Job Template	Default			

8. Observe the z/OS Ping job run.

Jobs > 9 - z/OS Ping

Output

z/OS Ping Successful

```

Take time to explore the other templates that are ready to use. Learn more about the automation capabilities [here](#).

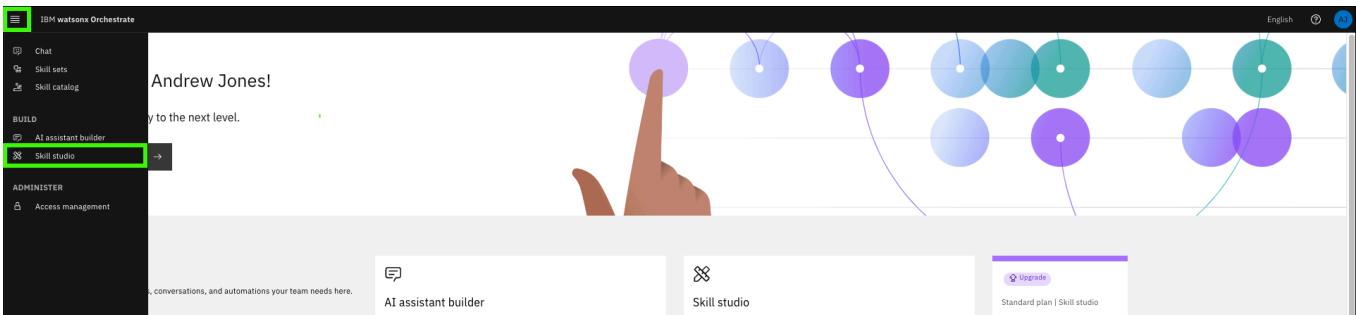

Importing skills from Ansible Automation Platform

Now that you understand Ansible Automation Platform (AAP) and the preinstalled automations available, you can import them as skills into your watsonx Orchestrate instance, which is used for assistant guided actions.

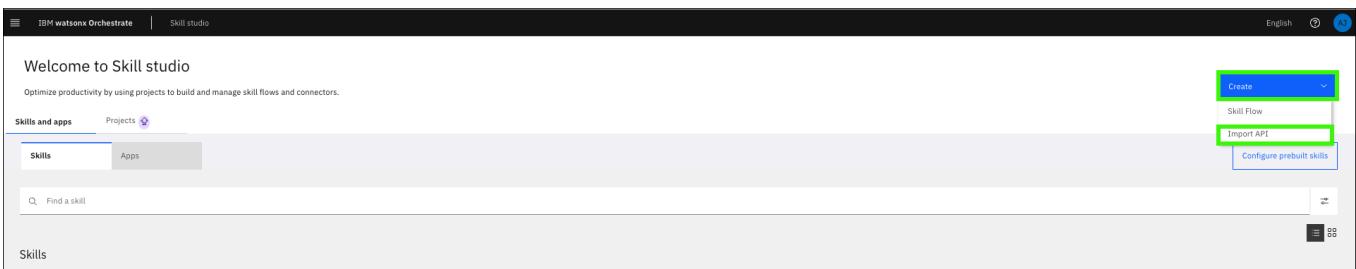

Import skills into your assistant

The next steps assume that you have an active browser window to the watsonx Orchestrate ITZ cloud account. If you do not, refer to the initial steps in [Creating an assistant and configuring conversational search](#).

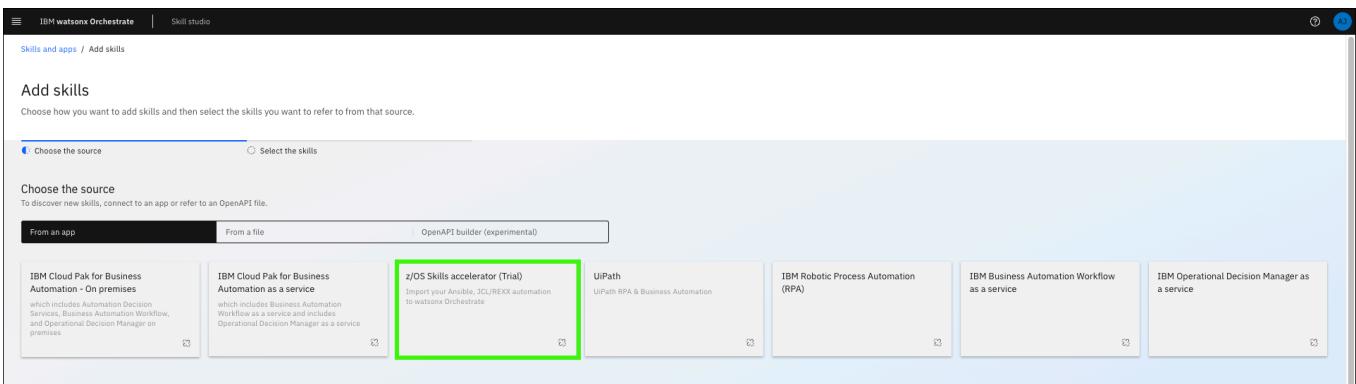

1. Return to your watsonx Orchestrate instance and expand the main menu and click **Skill studio**.

2. Expand **Create** and click **Import API**.

3. Click the **z/OS Skills accelerator (Trial)** tile.

4. Enter the following values in the **z/OS Skills accelerator** form and then click **Connect**.

Use the **URL**, **User Name**, and **Password** values recorded in the [Explore Ansible Automation Platform](#) section earlier.

a: Connection Type: **ansible**

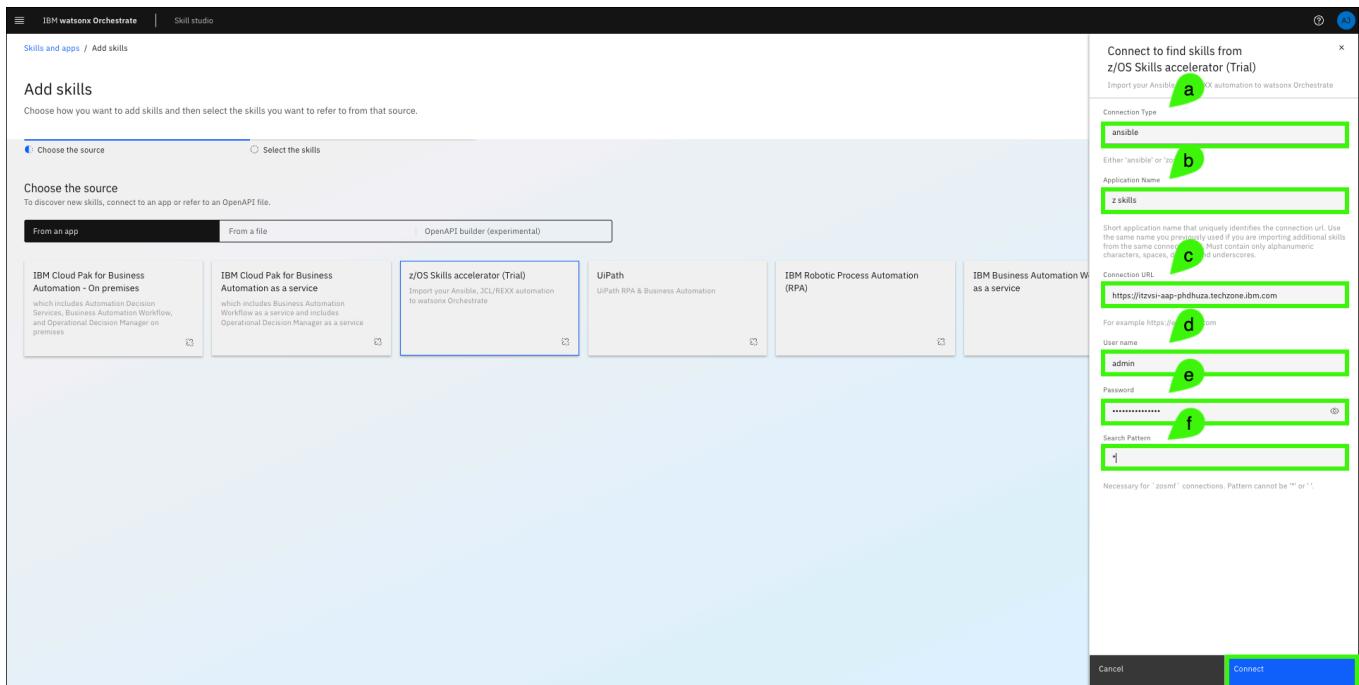

b: Application Name: <enter a meaningful name for the skills that you will import> - *be sure to remember this name, you will need in the next section*

c: Connection URL: <enter the URL for your AAP UI>

d: User Name: <enter the AAP User Name (for UI access)>

e: Password: <enter the AAP User Password>

f: Search Pattern: *

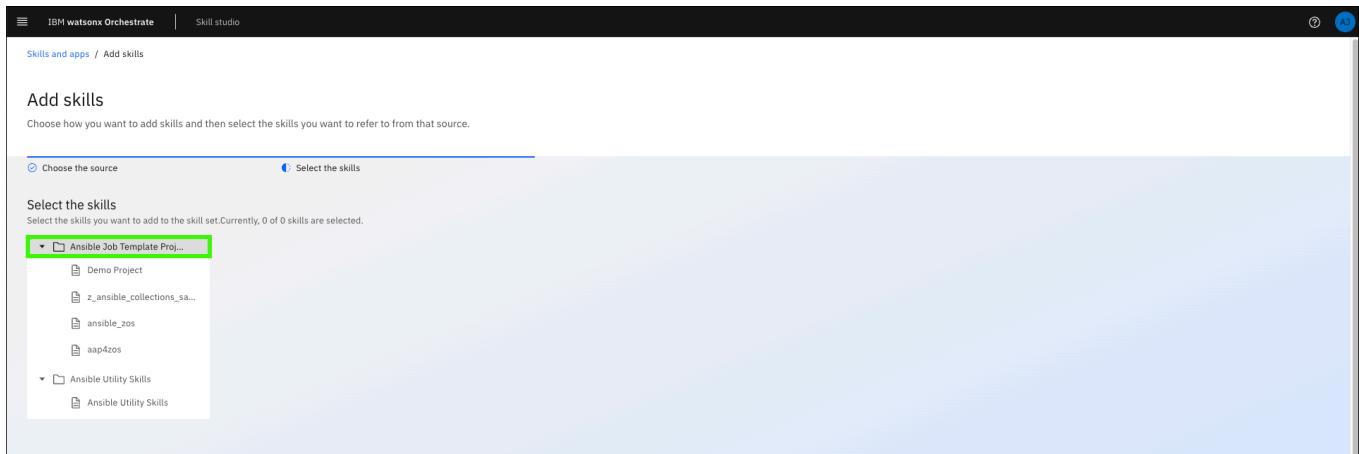

5. Expand the Ansible Job Template Proj... folder.

Explore the other available skills

Take time to explore the available skills. There are many utility skills provided out of the box with the “Z Skills Accelerator” which are needed for actions such as retrieving the output of an Ansible skill. Consider importing these utility skills to enable more complete automation execution flows.

6. Click **aap4zos**.

z/OS Gather Facts	Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
z/OS Ping	Just 1 step away to be ready	Ready to publish	Imported	andrew@jones-tx.com	November 19 2024

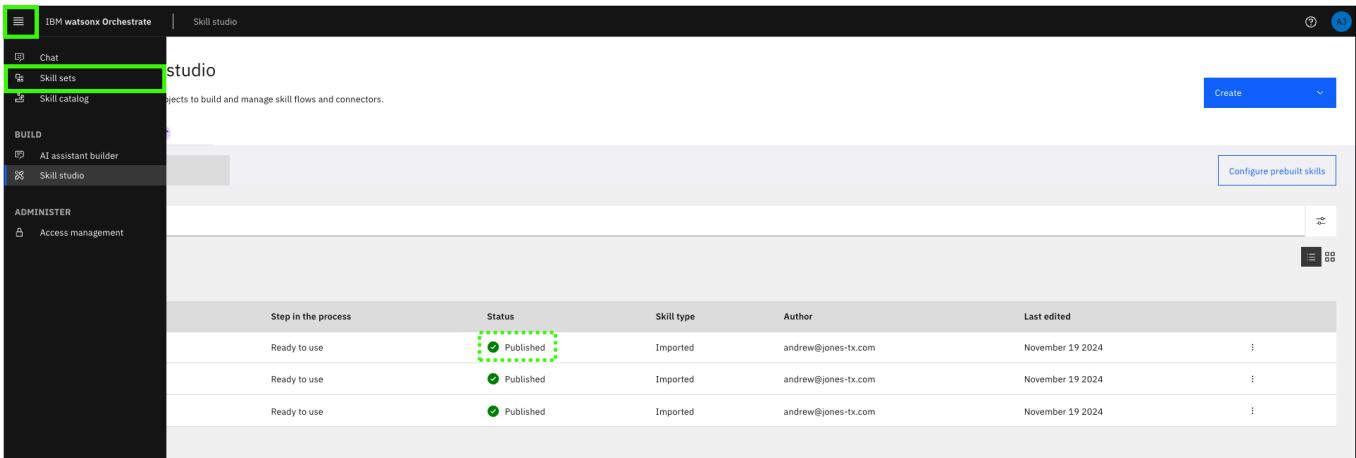

Configure prebuilt skills

The selected skills are now ready for use and available to your assistant. In the next section, learn how to connect them to your assistant.

Connecting skills to your assistant

Once you have a subset of skills published, the application you created can be connected to your assistant.

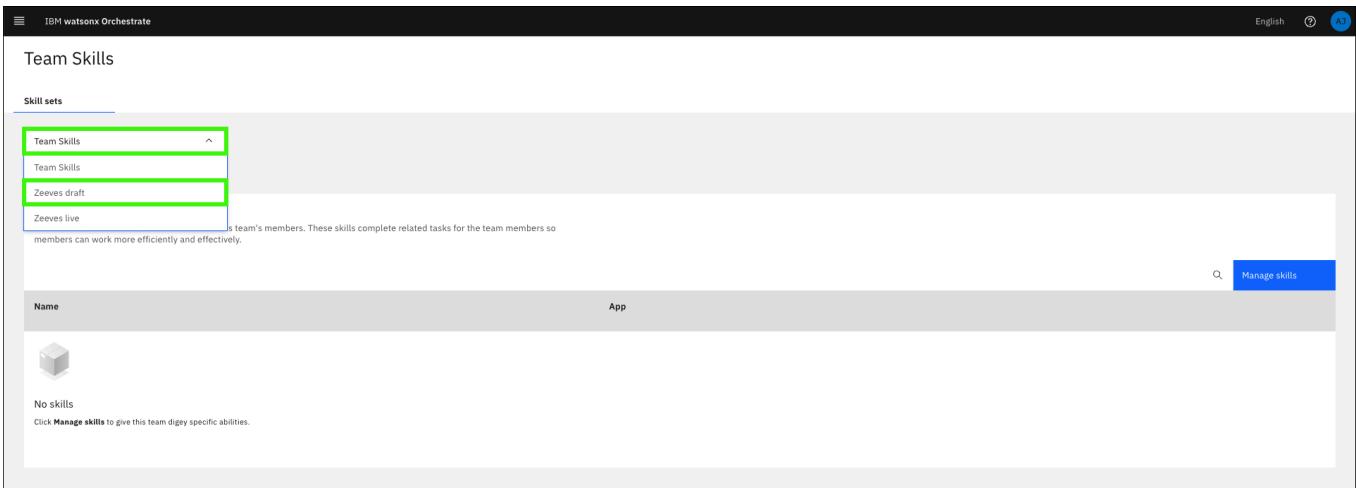

1. Expand the main menu and select **Skill sets**.

The screenshot shows the IBM Watsonx Orchestrate interface with the 'Skill studio' tab selected. The left sidebar has 'Skill sets' highlighted with a green box. The main area displays a table of published skills:

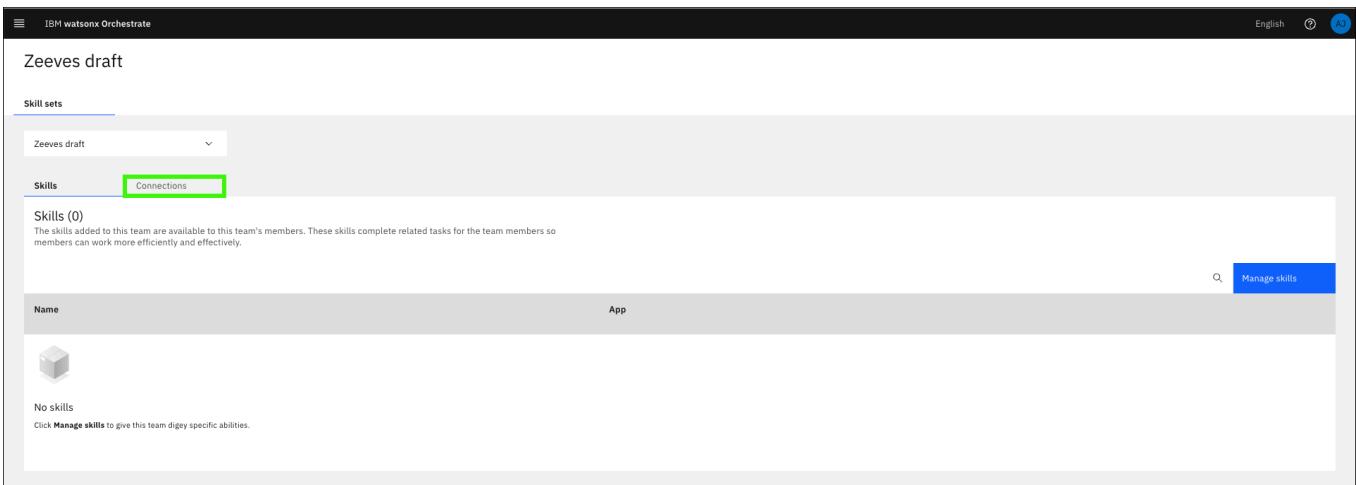

Step in the process	Status	Skill type	Author	Last edited
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024

2. Click the **Team Skills** drop-down and select the **Draft** of your assistant.

The screenshot shows the 'Team Skills' page. The 'Skill sets' dropdown is open, showing 'Team Skills' and 'Zeeves draft' (which is highlighted with a green box). Below the dropdown, a note says: 'The skills added to this team are available to this team's members. These skills complete related tasks for the team members so members can work more efficiently and effectively.' A 'Manage skills' button is visible.

3. Click the **Connections** tab.

The screenshot shows the 'Zeeves draft' team page. The 'Skills' tab is selected (highlighted with a green box), showing '(0)' skills. Below it, the 'Connections' tab is also present. A note at the top says: 'The skills added to this team are available to this team's members. These skills complete related tasks for the team members so members can work more efficiently and effectively.' A 'Manage skills' button is visible.

4. Click the **Search (🔍)** icon.

Application	Number of skills	Credential type	Connected by ⓘ	Action

Ansible Controller Skills - z skills	2	⚠️ Not specified	-	⋮

Items per page: 5 | 1-1 of 1 items | Connect app | 1 ⚏ of 1 page | < >

7. On the **Connect to Ansible Controller Skills** form, keep the defaults and click **Connect app**.

Application	Number of skills	Credential type
Ansible Controller Skills - z skills	2	Not specified

8. Enter the (a) **username** and (b) **password** using the username (**admin**) and password for your IBM Technology Zone (ITZ) watsonx Assistant for Z Pilot - AAP & z/OS reservation (**AAP User Password (Use SSH key to login, only use password for UI)**), and then click **Connect app**.

Application	Number of skills	Credential type
Ansible Controller Skills - z skills	2	Not specified

The application is now connected to the draft version of your assistant.

Application	Number of skills	Credential type	Connected by	Action
Ansible Controller Skills - z skills	2	Team	andrew@jones-tx.com	⋮

Continue to the next section to create actions for your assistant.

Creating actions for your assistant

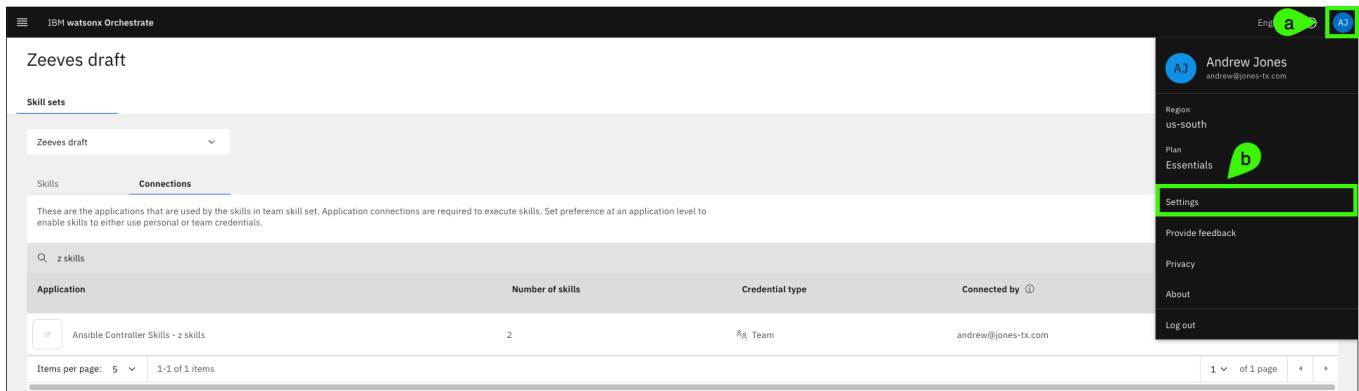

Once the skills in your application are connected to your assistant, you're ready to begin creating actions tied to those skills. Learn more about building actions [here](#)

Configure the number of input fields

Before configuring actions, it's important to modify a setting within watsonx Orchestrate that allows triggered skills to display as forms (versus conversational skills).

1. Click your (a) profile icon and then click (b) **Settings**

Learn more about configuring input fields [here](#).

The screenshot shows the IBM Watsonx Orchestrate interface. At the top right, there is a user profile icon (a green circle with 'a') and a gear icon. A green callout bubble labeled 'a' points to the user profile icon. Another green callout bubble labeled 'b' points to the 'Settings' link in the sidebar menu.

The main area displays a 'Skill sets' section for 'Zeeves draft'. It shows one skill set named 'Ansible Controller Skills - z skills' which contains 2 skills, connected by a team credential (Team) to the user 'andrew@jones-tx.com'. The sidebar on the right includes links for Region (US-SOUTH), Plan (Essentials), Settings (highlighted with a green bar), Provide feedback, Privacy, About, and Log out.

2. Click the **Skill configurations** tab.

The screenshot shows the 'Settings' page in IBM Watsonx Orchestrate. The 'Skill configurations' tab is highlighted with a green border. The 'Data Retention' tab is also visible. The 'Skill configurations' section contains a 'Data Retention Policy' subsection with an 'Active' radio button selected. A note states that chat history is saved for 30 days and deleted permanently after that.

3. Enter 0 for the **Number of form fields**.

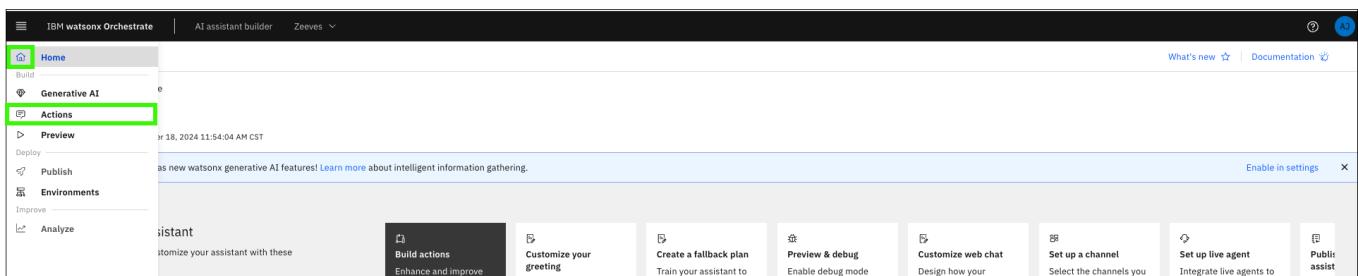

The screenshot shows the 'Settings' page again, with the 'Skill configurations' tab selected. In the 'Skill configurations' section, there is a note: 'Set default for maximum number of fields to consider a skill to be conversational'. Below this is an input field labeled 'Number of form fields' containing the value '0'. There are minus and plus buttons next to the input field.

Create actions

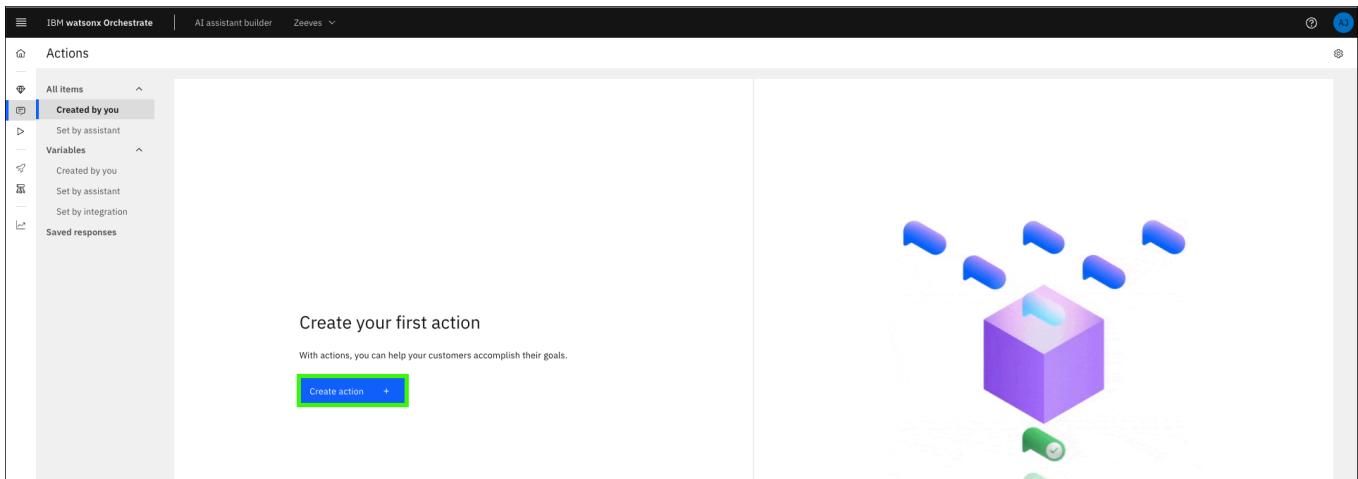

4. Click the main menu and select **AI assistant builder**.

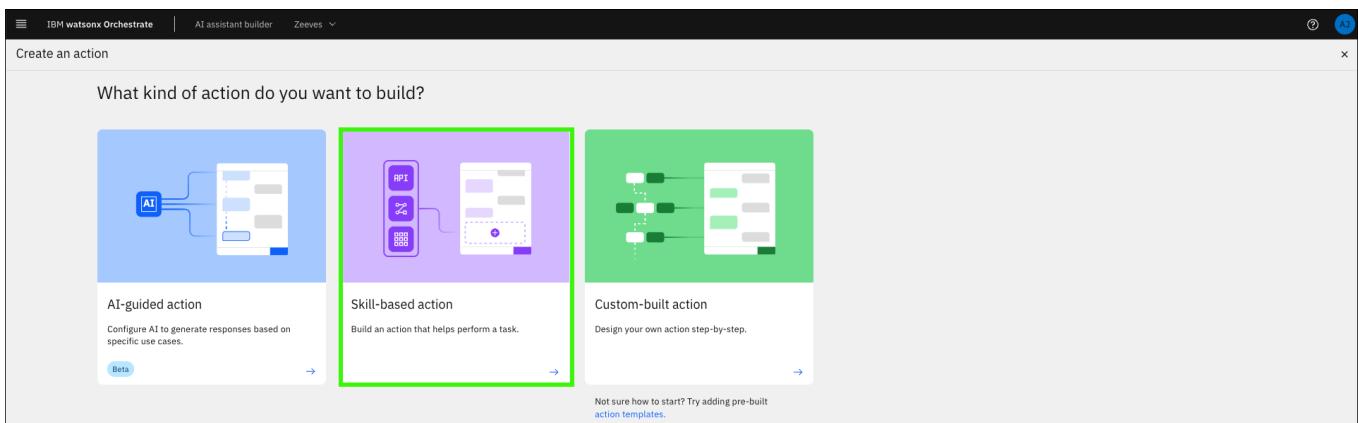

5. Hover over the **Home** icon (🏠) and click **Actions**.

6. Click **Create action**.

7. Click the **Skill-based action** tile.

8. Select the **z/OS Gather Facts** tile and click **Next**.

Note, it may take a minute for the page to display the action tiles. The date shown in the **z/OS Gather Facts** tile reflects when you added the skill to your application.

The screenshot shows a list of skills under the heading "Build an action from a skill". The "Select a skill" section says "Choose a conversational skill published as a foundation of your action." A search bar is present. Below is a grid of cards:

Welcome, how can I assist you?

You 1:04 PM
Get z/OS facts

1:05 PM
Conversational skill called z/OS Gather Facts recognized
job : 12
status : pending
There are no additional steps for this action. Add a new step or end the action.

Use the up arrow for prior messages

In the execution of this skill-based action, the skill executed properly and the output is the job id. If an error is generated, review the [Troubleshooting](#) section below.

Learn more about building actions [here](#).

Verify the job in the Ansible Automation Platform console

Return to the Ansible Automation Platform (AAP) console and review the job information.

14. Click **Jobs** and expand the **## - z/OS Gather Facts** job.

The screenshot shows the AAP Jobs page. The left sidebar has 'Views' expanded, with 'Jobs' selected. The main area is titled 'Jobs' and shows a table with one row. The row for '12 - z/OS Gather Facts' is highlighted with a green dashed box. A larger green dashed box surrounds the entire job details section. The job details table includes columns for Launched By, Job Template, Execution Environment, and Inventory. The job was successful, ran as a Playbook Run, and used the z/OS Gather Facts template.

Name	Status	Type	Start Time	Finish Time	Actions
12 - z/OS Gather Facts	Successful	Playbook Run	11/19/2024, 1:05:00 PM	11/19/2024, 1:05:11 PM	

Launched By	Job Template	Execution Environment	Inventory
admin	z/OS Gather Facts	aap4zos EE	AAP z/OS

Project	Credentials
aap4zos	SSH: z/OS Host SSH ...

Job Slice
0/1

As seen in the assistant, the actual contents of the output aren't displayed. The utility skills are used to retrieve the job output. It is also possible to create a skill flow that executes the **z/OS Gather Facts** skill followed by the **Retrieve job output** utility skill in sequence; passing the job id from the first skill to the second, in order to view the output within the assistant. Creating a skill flow is covered in the next section.

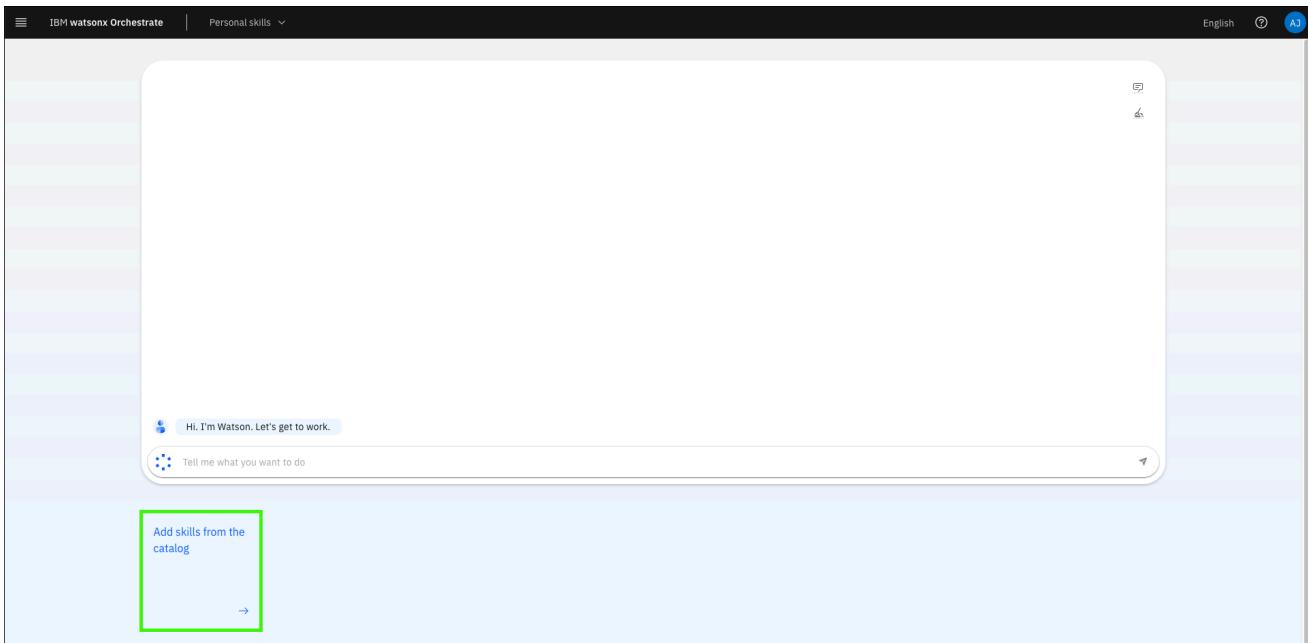

Troubleshooting

Skill returns "Sorry, we're having issues generating a response".

This error appears to be an intermittent issue when a skill is first added. To resolve, add the skill to your personal skills catalog using the steps that follow.

1. Expand the main menu and select Chat.

2. Click Add skills from the catalog.

3. Search for the skill app you created earlier and click the tile for your app.

The screenshot shows the 'Skill catalog' page. At the top, it says "Skills are grouped by app. Select an app to see all the skills that use that app." Below is a search bar with the text "z skills". The main area is titled "Apps" and shows several skill categories in a grid:

- Salessoft: 47 skills
- Cognos: 8 skills
- Skill flows: 167 skills
- Adobe Workfront: 37 skills
- Webex: 14 skills
- IBM Process Mining: 2 skills
- Salesforce Chatter: 5 skills
- Ansible Controller Skills - z skills: 2 skills** (This tile is highlighted with a green box.)
- Interview top candidates using ...: 2 skills
- Reveal your existing applicants...: 7 skills
- Seismic: 22 skills
- FreshService: 25 skills
- Workday HCM: 36 skills
- ZoomInfo: 26 skills

4. Click Add skill for all the skills you want to add.

The screenshot shows the details for the "Ansible Controller Skills - z skills" app. It has a count of "(2)". Below is a search bar with the text "Search skills". Under "Ansible Controller Skills - z skills", there are two skill cards:

- z/OS Gather Facts**: "z skills - This sample playbook demonstrates the z/OS gather facts module, which pulls z/OS-...". An "Add skill + button" is highlighted with a green box.
- z/OS Ping**: "z skills - This playbook pings the z/OS host to test connectivity.". An "Add skill + button" is highlighted with a green box.

5. Click Connect app.

Ansible Controller Skills - z skills (2)

z/OS Gather Facts
z skills - This sample playbook demonstrates the z/OS gather facts module, which pulls z/OS...
z/OS Ping
z skills - This playbook pings the z/OS host to test connectivity.

Connect app

6. Enter the (a) **username** and (b) **password** using the username (admin) and password for your IBM Technology Zone (ITZ) watsonx Assistant for Z Pilot - AAP & z/OS reservation (AAP User Password (Use SSH key to login, only use password for UI)), and then click **Connect app**.

Connect to Ansible Controller Skills - z skills

username: admin

z/OS Ping
z skills - This playbook pings the z/OS host to test connectivity.

Connected

8. Try one of the prompts you created for your skill.

Prompt:

Gather z/OS facts

The screenshot shows the IBM Watsonx Assistant interface. At the top, it says "IBM Watsonx Orchestrate" and "Personal skills". On the right, there are language settings for "English" and a blue "Aj" button. The main area has a message from Watson: "Hi, I'm Watson. Check out the skills in the catalog to see how I can help you." Below this, a green button labeled "Gather z/OS facts" is highlighted. A green dashed box encloses the results of this skill: "z/OS Gather Facts", "status: pending", and "job: 12". At the bottom, there's a blue input bar with the placeholder "Tell me what you want to do". To the left, a blue box contains the text "Add skills from the catalog" with an arrow pointing right. To the right, another green dashed box encloses "Ansible Controller Skills - z skills" with a "2 skills" badge.

You should now be able to run the skill through the assistant preview.

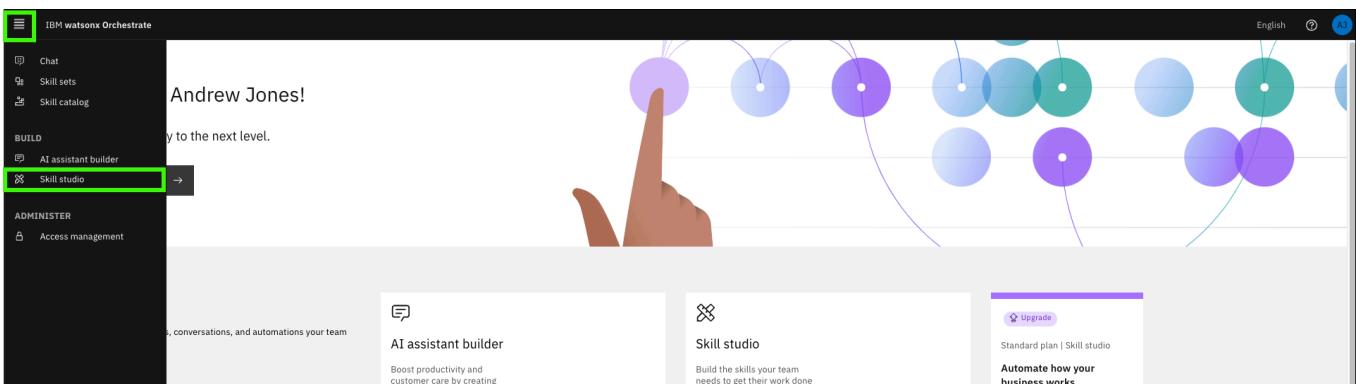

Creating skill flows

As seen in the previous section, running the Ansible skill to **Gather z/OS facts**, the skill executed successfully and was verified within the Ansible Automation Platform (AAP) console by viewing the job output. However, the output wasn't displayed by the assistant. To enable this scenario, a skill flow is needed. Skills are often more valuable when combined with other skills. You can create a skill flow to use two or more skills together to finish a task (like returning the output of a previous skill). When you create a skill flow, you map the output of one skill as the input for subsequent skills. Learn more about creating skill flows [here](#).

As mentioned in a previous section, there are some default utility skills that are provided out of the box with the "Z Skills Accelerator" which are leveraged to return the output of a skill. To accomplish this, we will import the Ansible Utility skill called **Retrieve job output**.

Add the utility skill

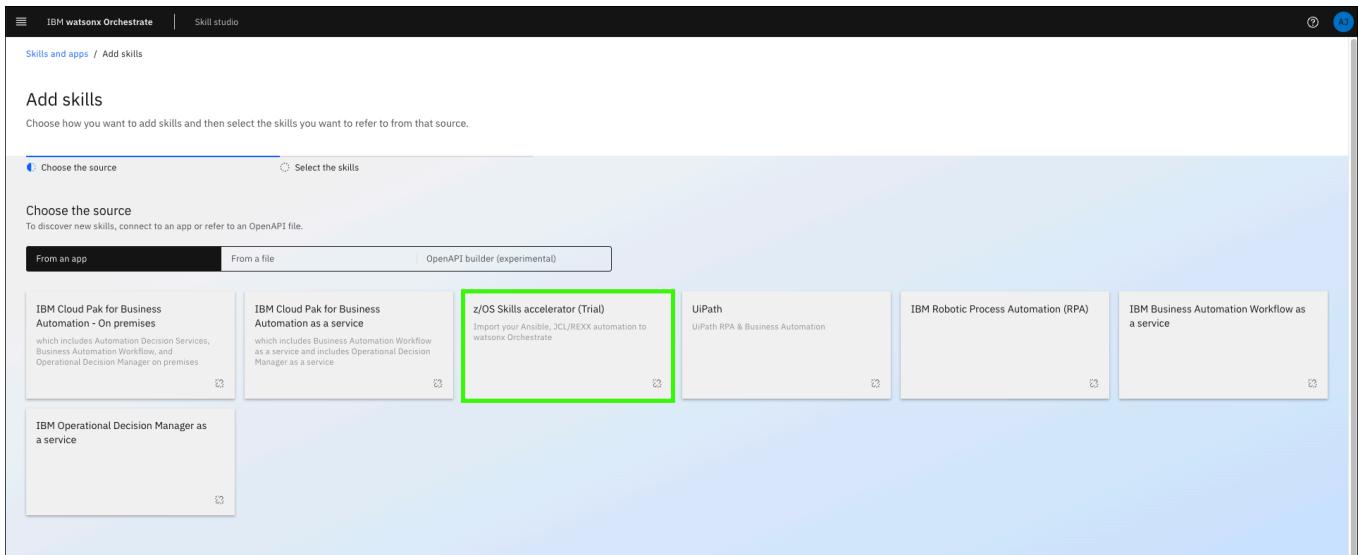

1. Open IBM watsonx Orchestrate **Skill studio**.

2. Expand **Create** and click **Import API**.

Name	Step in the process	Status	Skill type	Author	Last edited
z/OS Ping	Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
z/OS Gather Facts	Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024

3. Click the **z/OS Skills accelerator (Trial)** tile.

4. Enter the following values in the **z/OS Skills accelerator** form and then click **Connect**.

Use the **URL**, **User Name**, and **Password** values recorded in the **Explore Ansible Automation Platform** section earlier.

a: Connection Type: **ansible**

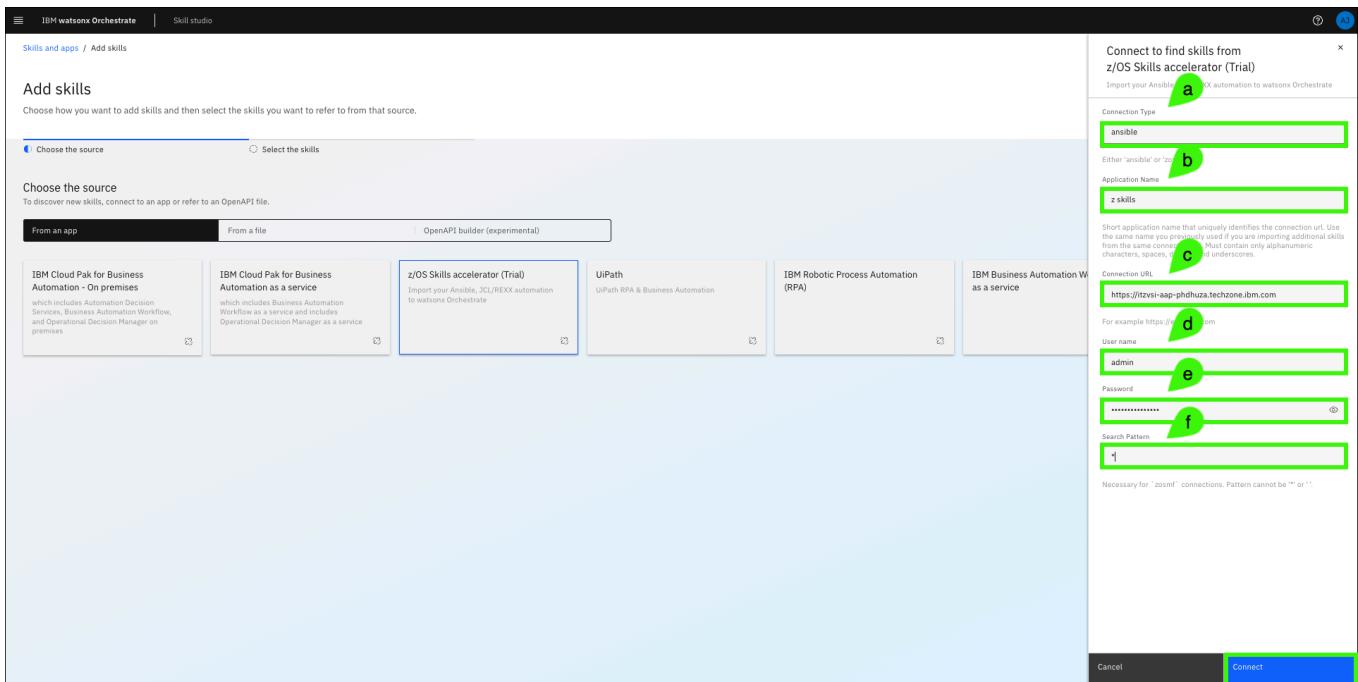

b: Application Name: <use the same application name as in previous section> - *

c: Connection URL: <enter the URL for your AAP UI>

d: User Name: <enter the AAP User Name (for UI access)>

e: Password: <enter the AAP User Password>

f: Search Pattern: *

5. Expand **Ansible Utility Skills** and click **Ansible Utility Skills**.

6. Select **Retrieve job output** and click **Save as draft**.

7. Click the ellipses (...) for the **Retrieve job output** skill and select **Enhance this skill**.

8. Review the skill settings and then click **Publish**.

20. Expand the **Create** drop-down menu and click on **Skill flow**.

21. Click the + icon.

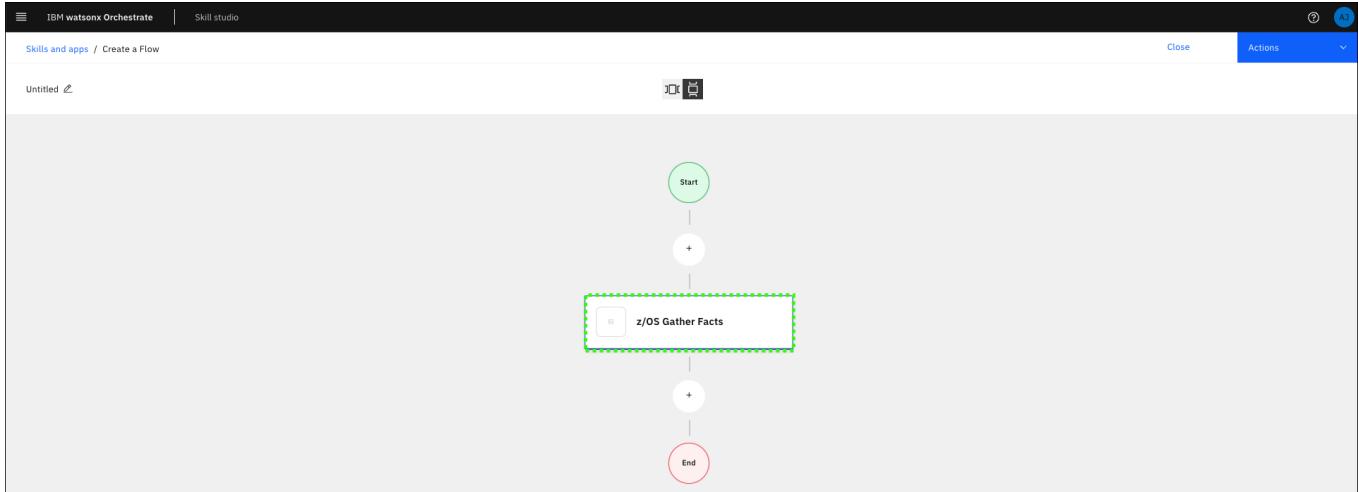

Next, you need to add the **z/OS Gather Facts** skill and the **Retrieve job output** skill to the skill flow. Use the **Search apps** function to locate the skills.

22. Search for the application name you specified earlier and click its tile.

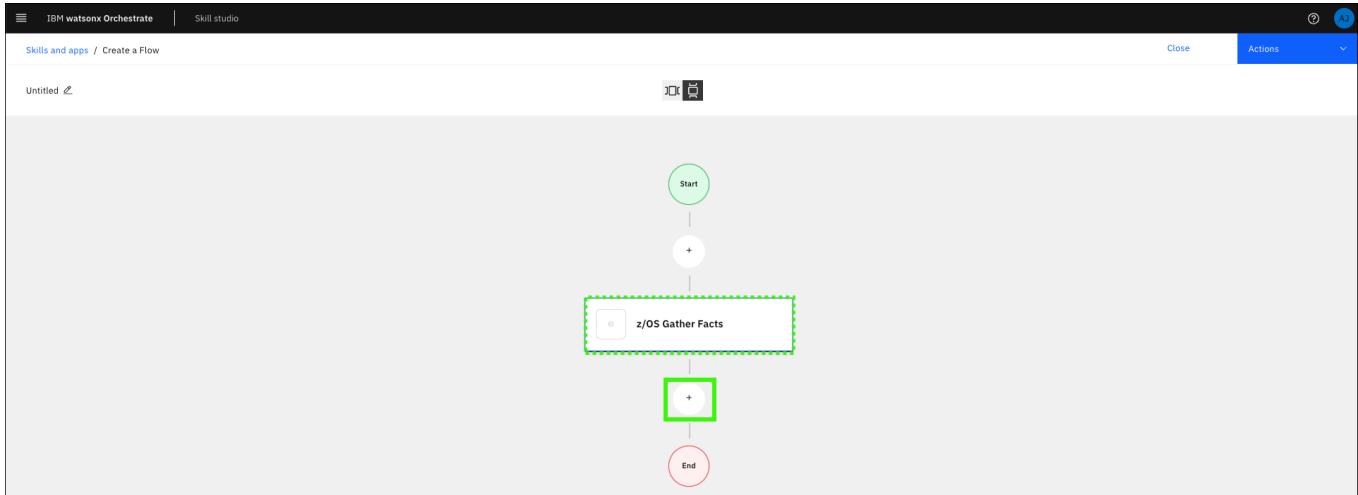

23. Click Add Skill in the **z/OS Gather Facts** tile.

24. Verify the **z/OS Gather Facts** skill is added to the skill flow.

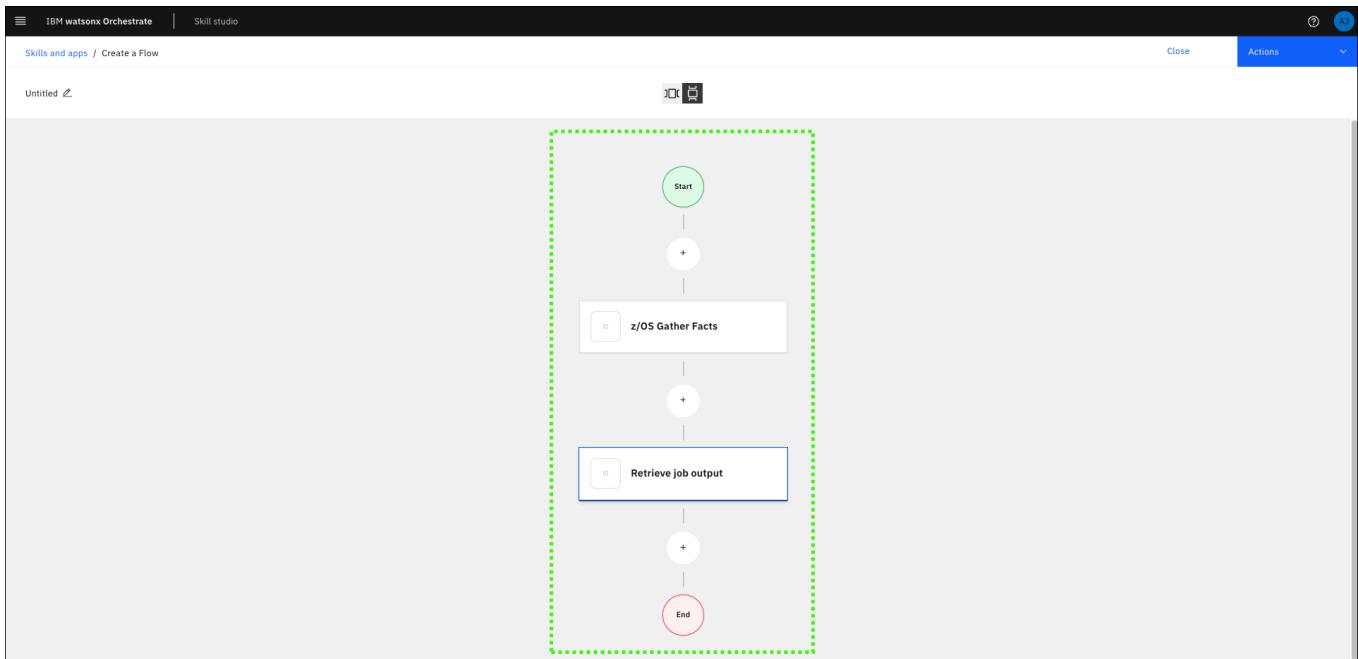

25. Click the **+** icon after the **z/OS Gather Facts** tile.

26. Repeat steps 22 and 23 for the **Retrieve job output** skill.

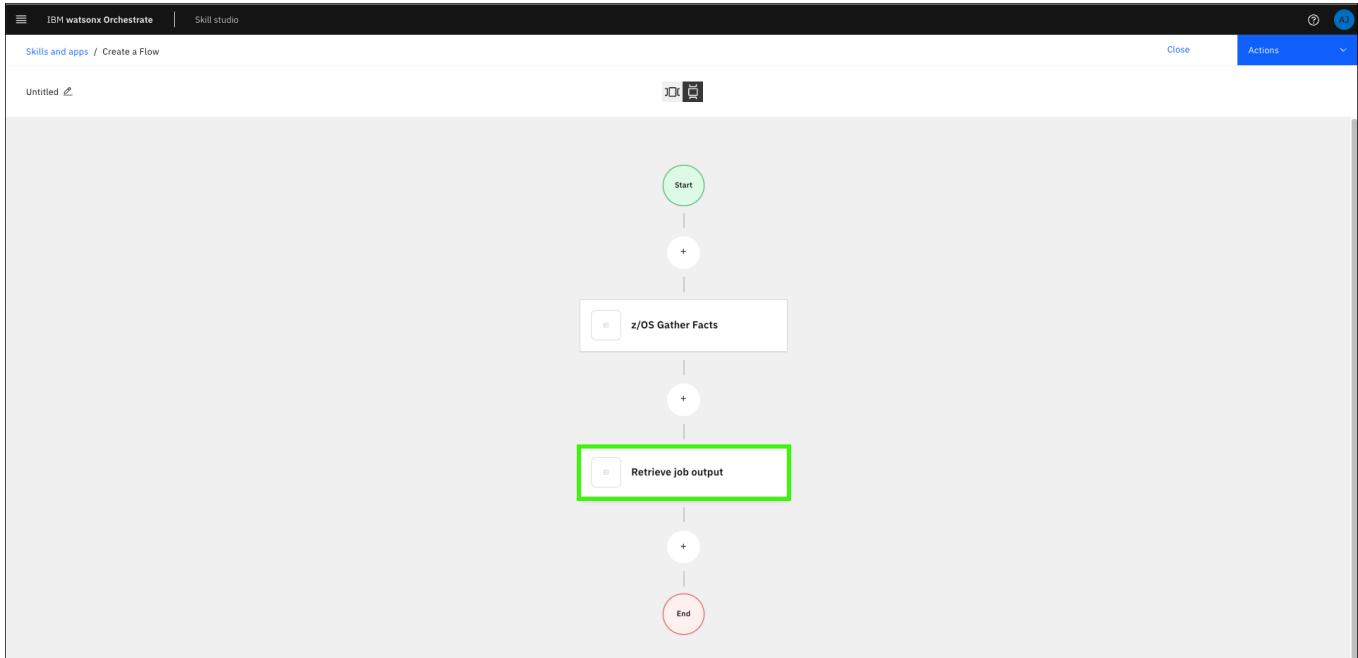

After adding the **Retrieve job output** skill, your skill flow should look like:

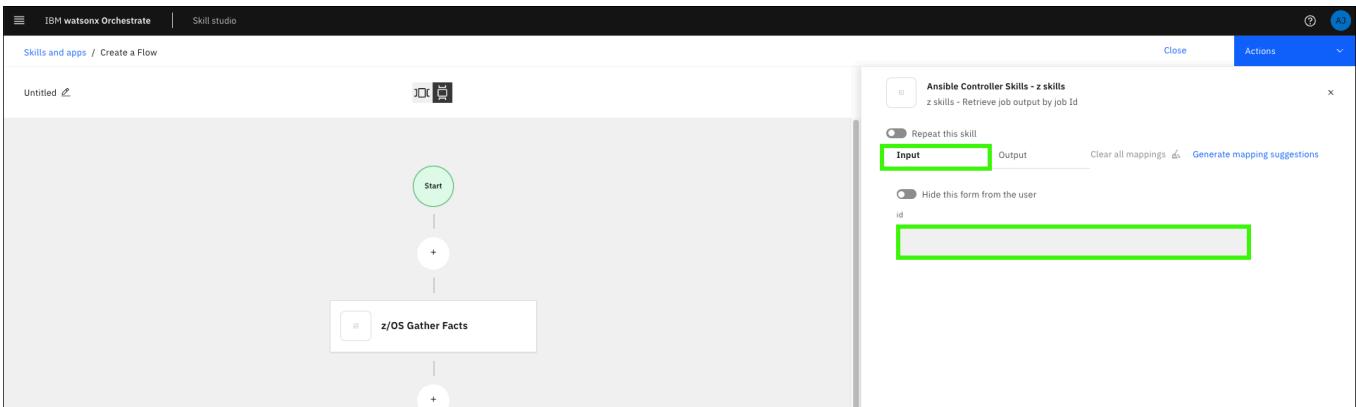

Map the outputs and inputs of the skills

Next you must map the output values of the first skill to the input of the second skill. In this case, pass the "job id" output from **z/OS Gather Facts** as an input for **Retrieve job output**.

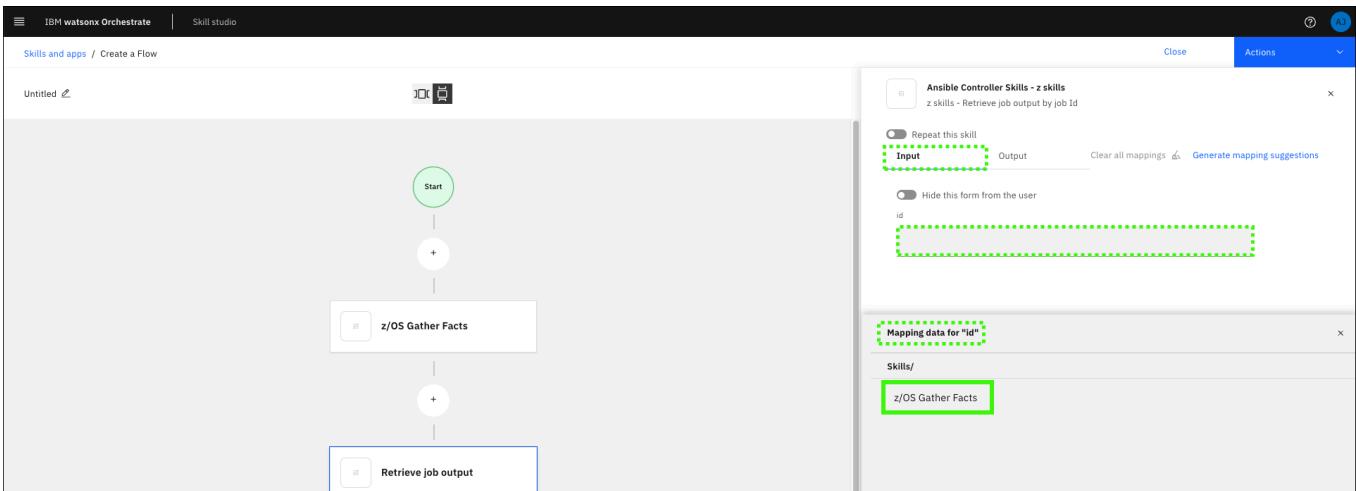

27. Click the **Retrieve job output** tile.

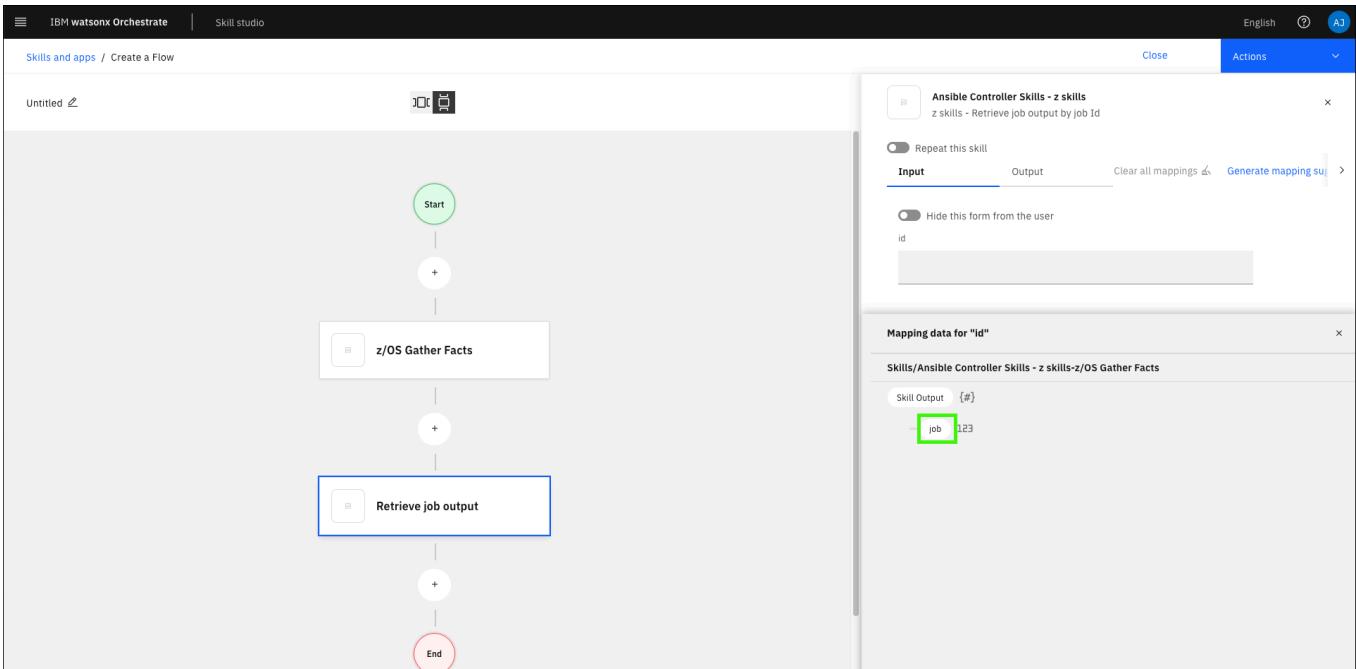

28. Select the **Input** tab and click in the **id** field.

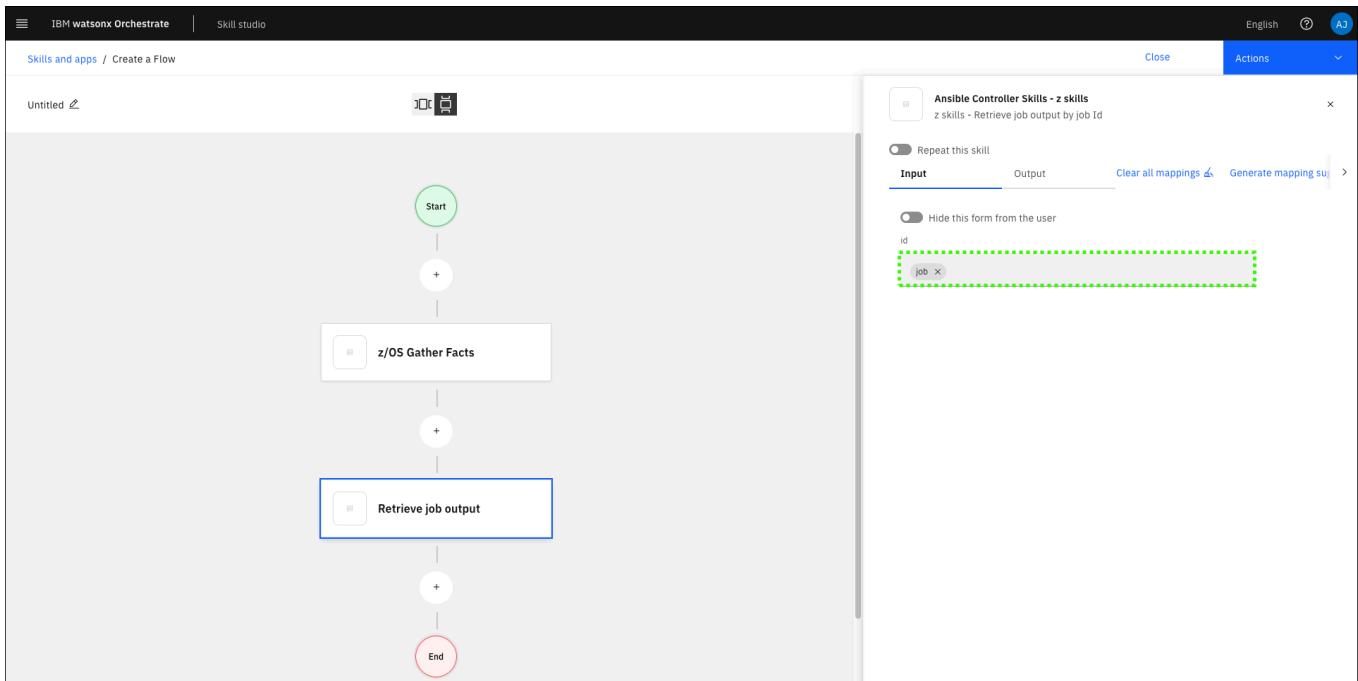

29. Click the **z/OS Gather Facts** skill in the **Mapping data for "id"** section.

30. Click the **job** icon.

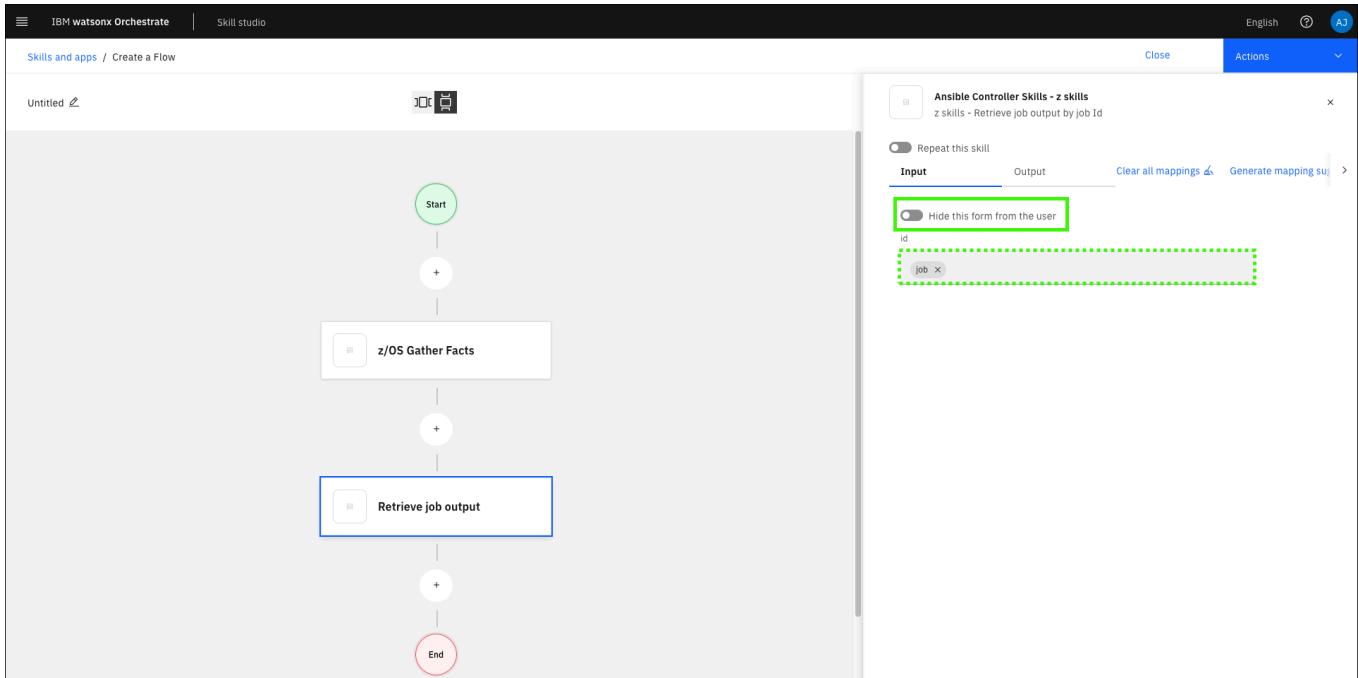

31. Verify the **job** appears in the **id** field.

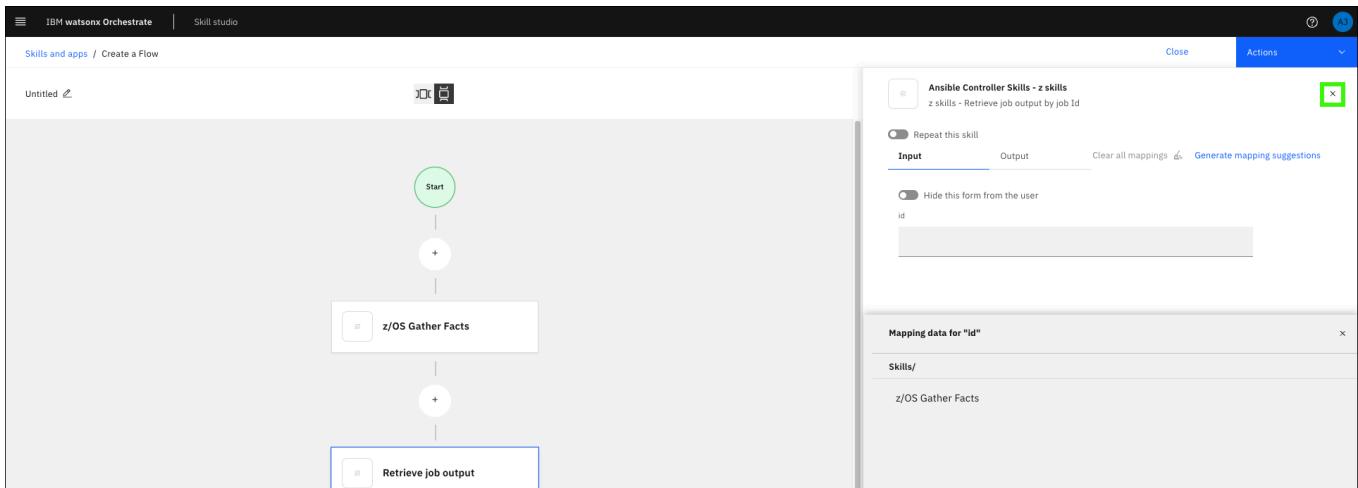

32. Optionally, toggle the **Hide this from the user** setting.

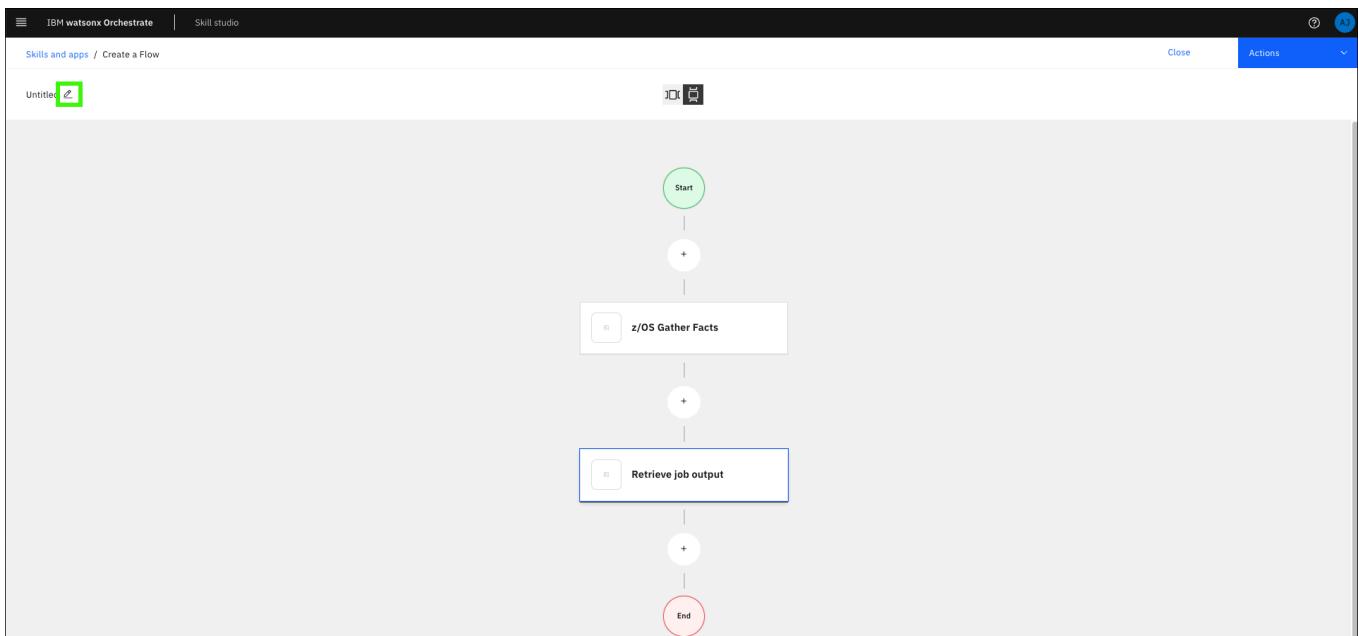

For this lab guide, this option is left disabled. Learn more about this option [here](#).

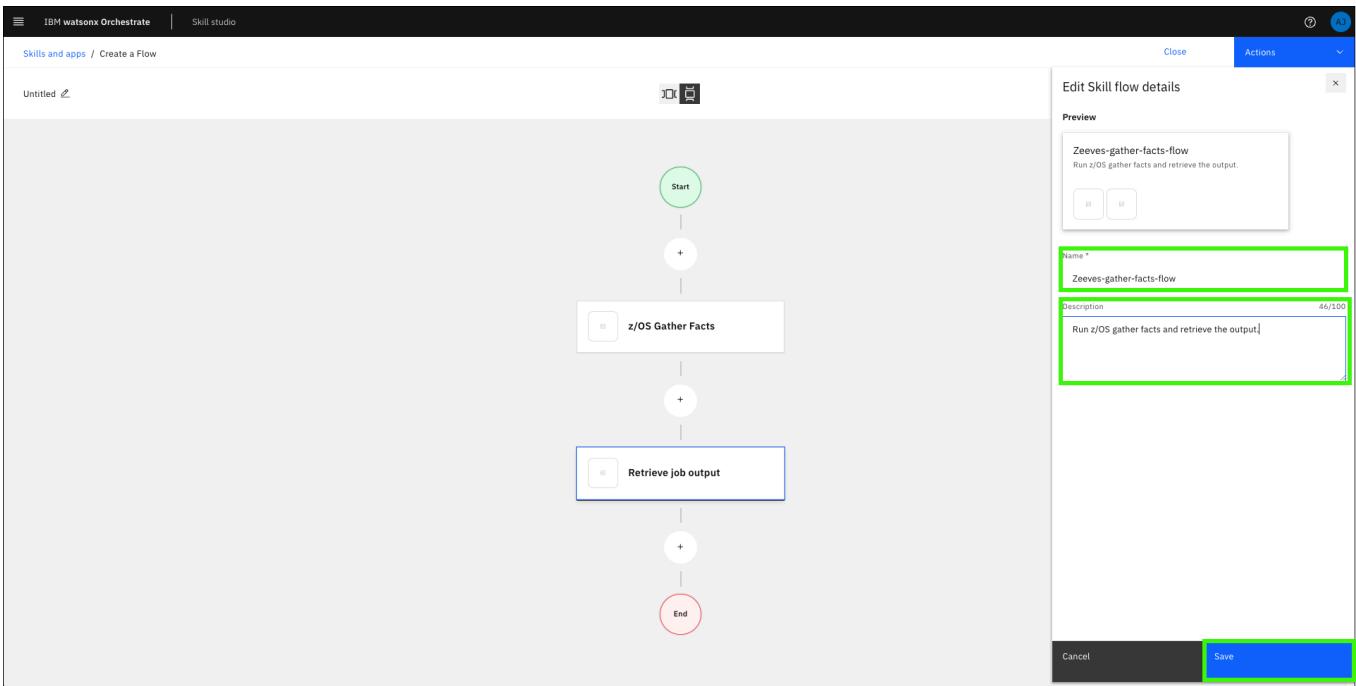

33. Click the x to close mapping window.

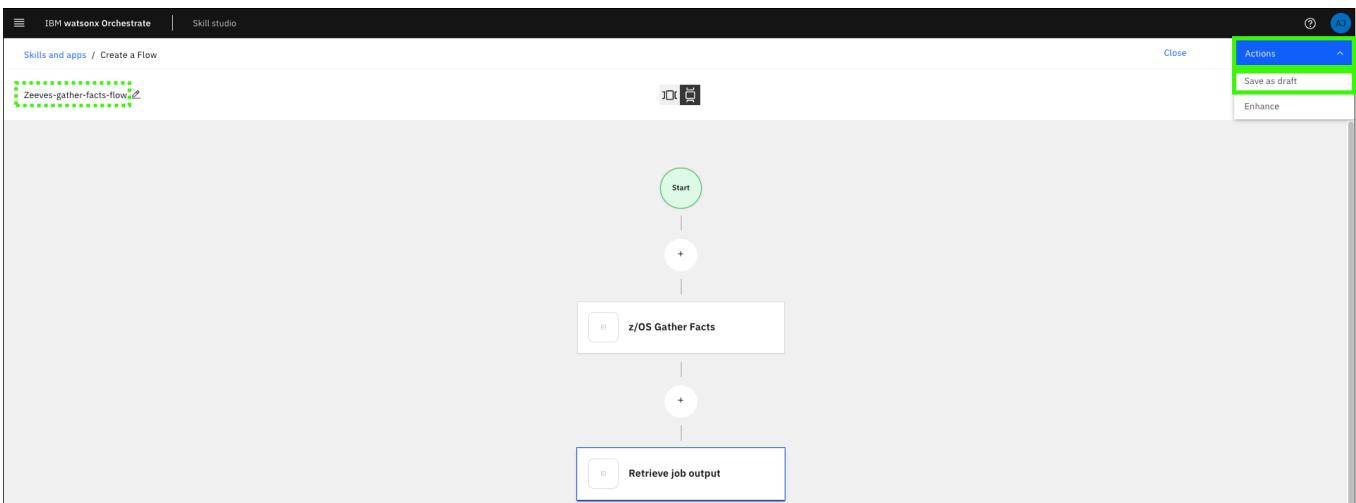

34. Click the pencil (✍).

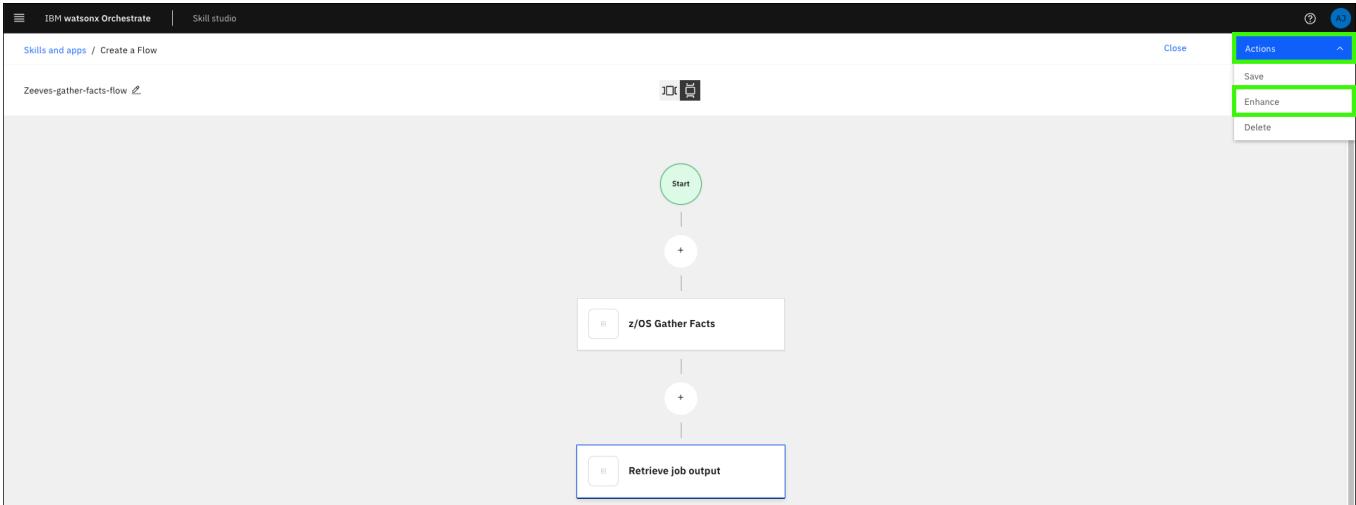

35. Enter a (a) **Name** and (b) **Description** for your skill flow and then (c) click **Save**.

36. Expand the **Actions** pull-down list and click **Save as draft**.

37. Expand the **Actions** pull-down list and click **Enhance**.

Enhancing the skill flow

On the **Enhancing the skill** pages, you can: - modify the skill name, description, and version - add phrases (prompts) that will be recognized by the assistant to call the skill flow -

36. Click the **Phrases** tab.

37. Enter new **phrases** (prompts) for your skill flow and then click **Publish**.

Notice the default prompts are either not very intuitive (the skill flow name) or a bit verbose. Add a couple of other prompts that you anticipate users will enter.

Example prompts:

Show me z/OS facts

Gather and display z/OS facts

Enable the skill flow in your assistant

38. Click AI assistant builder in the main menu.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there is a dark sidebar with several menu items: Chat, Skill sets, Skill catalog, BUILD (which is expanded), AI assistant builder (highlighted with a green box), and Skill studio. The main area is titled "Skill studio" and contains a message: "Objects to build and manage skill flows and connectors." Below this is a table with four rows of skill information:

Step in the process	Status	Skill type	Author	Last edited
Ready to use	Published	Skill flow	andrew@jones-tx.com	November 19 2024
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024

A green box highlights the "AI assistant builder" menu item in the sidebar.

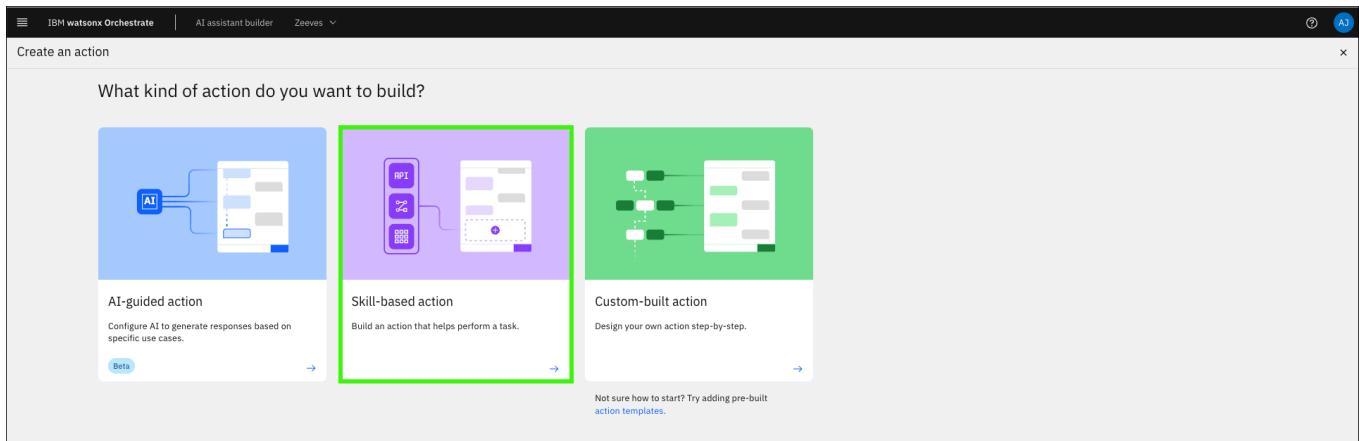

39. Hover over the **Home (🏠) and click **Actions**.**

The screenshot shows the "AI assistant builder" section of the interface. On the left, there is a sidebar with Home, Build, Generative AI, and Actions (highlighted with a green box). The main area has a heading "Actions" and a sub-section "Preview". It displays a timeline of actions: "Nov 18, 2024 11:54:04 AM CST" followed by "as new Watsonx generative AI features! Learn more about intelligent information gathering." Below this is a "Workflow" section with several tiles: "Build actions", "Customize your greeting", "Create a fallback plan", "Preview & debug", "Customize web chat", "Set up a channel", and "Set up live agent". At the bottom, there is a diagram showing a "Default behavior" node branching into "General purpose" and "Conversational search" nodes, which then lead to a "Search" node.

40. Click **New action.**

The screenshot shows the "Actions" list interface. On the left, there is a sidebar with Actions, All items, Created by you (highlighted with a green box), Variables, and Saved responses. The main area lists actions under "Created by you": "z/OS Gather Facts" (last edited 2 hours ago, 2 examples, 0 steps, status green). A green box highlights the "New action" button in the top right corner of the list table.

41. Click the **Skill-based action tile.**

42. Click the skill flow you created earlier and then click **Next**.

Note: it may take a minute for the tiles to appear on the screen.

The screenshot shows the 'Build an action from a skill' screen. It lists several skill flows:

```

The scenario shown above may or may not be relevant for your client's use case. It is intended to show how you to sequence skills together in a skill flow to create an action that your assistant triggers based on prompts using the pre-configured Ansible automation templates. You are encouraged to experiment with your own skill flows and prompts using other skills available within the AAP instance.

Next, learn about custom-built actions.

Creating custom-built actions

To this point, you have learned how to:

- import skills into Watsonx Orchestrate
- add applications with those skills to your assistant
- create skill-based actions for your assistant
- combine skills in a skill flow

There is also the ability to create **custom-built** actions. Custom-built actions allow you to create new actions with different steps to take in conversations and form sequences of prompts that define the conversation experience. The steps can be defined with or without conditions, which help control the custom responses. Steps within the custom action can end with routing to conversational search, triggering another existing sub-action, and other actions. This is a powerful way of customizing the end-user's experience.

Learn more about creating custom-built actions [here](#).

Importing pre-packaged z/OS skills

Provided with Version 2 of watsonx Assistant for Z is a set of pre-packaged skills which can be used to automate various tasks on z/OS, such as running different console commands and retrieving logs from batch jobs.

The list of pre-packaged skills available include:

- Authorized program list
- z/OS IPL Information
- Display zOS parmlib datasets
- Unix System services options
- Display zOS subsystems
- List spool files
- Retrieve dataset content
- Retrieve spool file content
- Retrieve z/OS Management Facility (OSMF) job status

IBM watsonx Orchestrate requires that any OSMF environment you connect to for skill execution has certificate authority (CA) signed certificates. In the case of the Ansible Automation Platform (AAP) & Wazi z/OS environment provisioned in IBM Technology Zone (ITZ), the z/OS system is not currently using CA signed certificates and therefore cannot execute the pre-packaged skills on your own z/OS system. For demo purposes, it is still recommended to import them so that the pre-packaged skills can be shown.

Work is in progress to modify the ITZ environments so that they are enabled for skill execution using these pre-packaged skills. In the meantime, the underlying automation for these pre-packaged skills can still be demonstrated using the Ansible skill 'z/OS Operator Command' which is available to import. This works because the pre-packaged skills are executing console commands directly using OSMF APIs which can also be run using the Ansible template skill 'z/OS Operator command'. For example, here are the console commands being used in some of the pre-packaged skills:

- Authorized Program list – `operator command -> d prog,lnklist`
- z/OS IPL Information - `operator command -> d iplinfo`
- Display zOS parmlib datasets - `operator command -> d parmlib`

You can import the pre-packaged skills into your sandbox environment by downloading the .zip file from [here](#) and following [these instructions](#).

You must extract the imbedded JSON file and modify the file for your environment by following [these instructions](#).

Publishing and deploying your assistant

To this point, acting as an Assistant Builder, you have built out the assistant, configured conversational search, and added skills and automations. While doing so, you have been testing your assistant using the **preview** capability of AI Assistant Builder. The **preview** capability is a closed environment for experimenting with prompts.

Once your assistant is finalized, you can publish it to make it available to end-users. Each assistant you create comes with two **environments**: *draft* and *live*. You have been configuring your assistant in the draft environment. Each environment has its own set of IDs, URLs, and service credentials that can be referenced by external services.

The **Environments** page in the AI assistant builder has tabs for managing both the **Draft environment** and the **Live environment**:

This screenshot shows the 'Environments' page in the AI assistant builder. The 'Draft' tab is selected, indicated by a green dashed border. The 'Live' tab is also present. On the left, there's a sidebar with icons for environments, channels, and other settings. The main area is divided into sections: 'Draft environment' (with a note about internal preview), 'Channels' (listing 'Web chat'), 'Resolution Methods' (showing 'Draft content' last edited on 11/19/2024 at 03:32PM), and 'Extensions' (listing 'Search'). A 'Preview this environment' button is located in the top right corner.

This screenshot shows the 'Environments' page in the AI assistant builder with the 'Live' tab selected, indicated by a green dashed border. The 'Draft' tab is also present. The layout is similar to the previous screenshot, with sections for 'Live environment' (with a note about deployment to customers), 'Channels' (listing 'Web chat'), 'Resolution Methods' (showing 'Content' with 'No published version'), and 'Extensions' (listing 'Search'). A 'Publish version' button is located in the top right corner of the content section.

The **Draft environment** contains all your in-progress work in the Actions, Preview, and Publish pages. Use the **Draft environment** tab to build out your assistant and use for internal testing before deployment. Any integrations you use (i.e. channels) for the **Draft environment** are unique to that environment, and changes to draft integrations don't affect the **Live environment**.

Publish the assistant

Each time that you publish, you're creating a new version of the assistant, for example V1. When you publish your content, you're creating a snapshot of the draft content, resulting in a version.

Versions do not contain integration configurations or environment settings

Published versions contain all of the content from actions, including settings and variables. **However, versions do not contain integration configurations or environment settings.** Integration configurations and environment settings must be configured manually in each environment.

For managing quality-control and versioning, the Live environment is the version of the assistant you should be giving access to the end-user.

Follow these steps to publish the first version of your assistant using Assistant Builder:

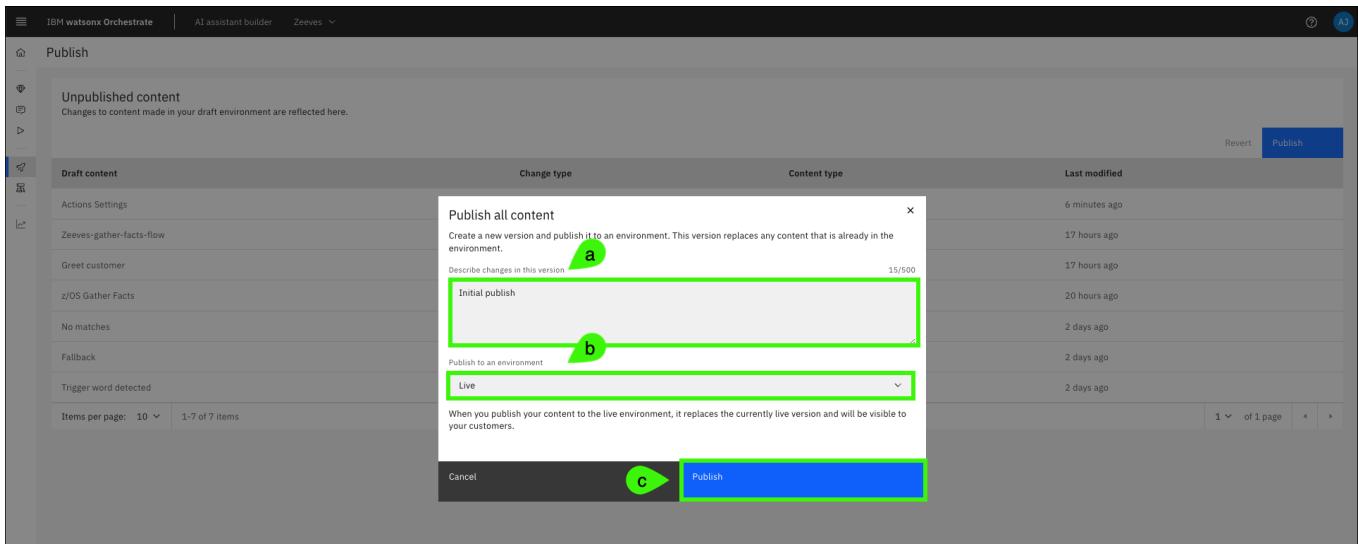

1. Hover over the **Home** icon () and click **Publish**.

The screenshot shows the 'Publish' step in the AI assistant builder. The 'Publish' button is highlighted with a green box. The interface includes sections for 'Build actions', 'Customize your greeting', 'Create a fallback plan', 'Preview & debug', 'Customize web chat', 'Set up a channel', 'Set up live agent', and 'Public assist'. A diagram at the bottom shows a 'Default behavior' node branching into 'General purpose' and 'Conversational search' nodes, which then lead to a 'Search' node.

2. Click **Publish**.

The screenshot shows the 'Publish' page with a table of draft content. The 'Publish' button is highlighted with a green box. The table columns are 'Draft content', 'Change type', 'Content type', and 'Last modified'. Items listed include 'Actions Settings' (Updated, Settings, 3 minutes ago), 'Zeeves-gather-facts-flow' (Updated, Actions, 17 hours ago), 'Greet customer' (Updated, Actions, 17 hours ago), 'z/OS Gather Facts' (Updated, Actions, 20 hours ago), 'No matches' (Updated, Actions, 2 days ago), 'Fallback' (Updated, Actions, 2 days ago), and 'Trigger word detected' (Updated, Actions, 2 days ago). At the bottom, there are pagination controls for 'Items per page: 10' and '1-7 of 7 items'.

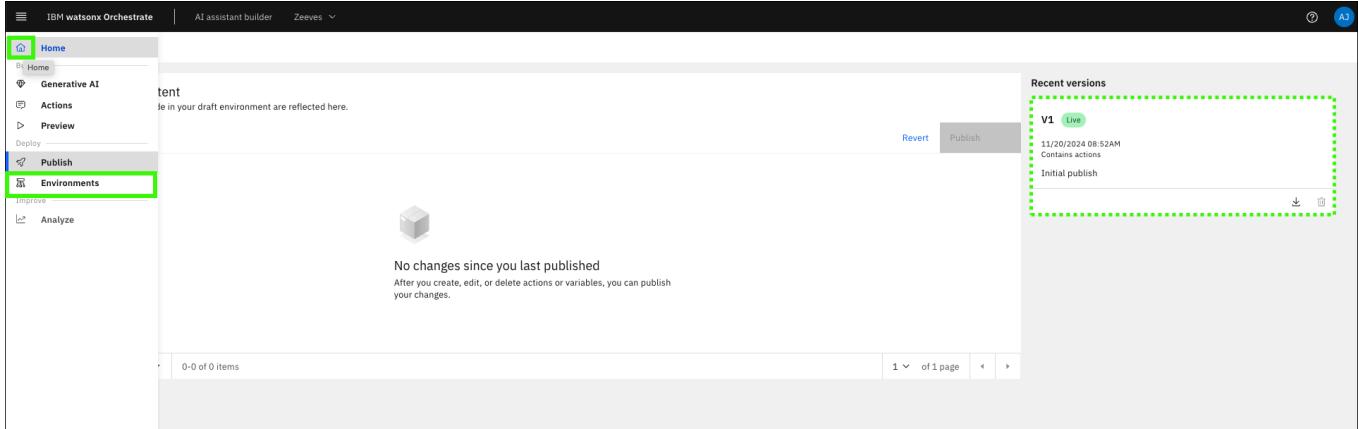

3. Enter a (a) description of the changes, set the (b) environment to **Live**, and then (c) click **Publish**.

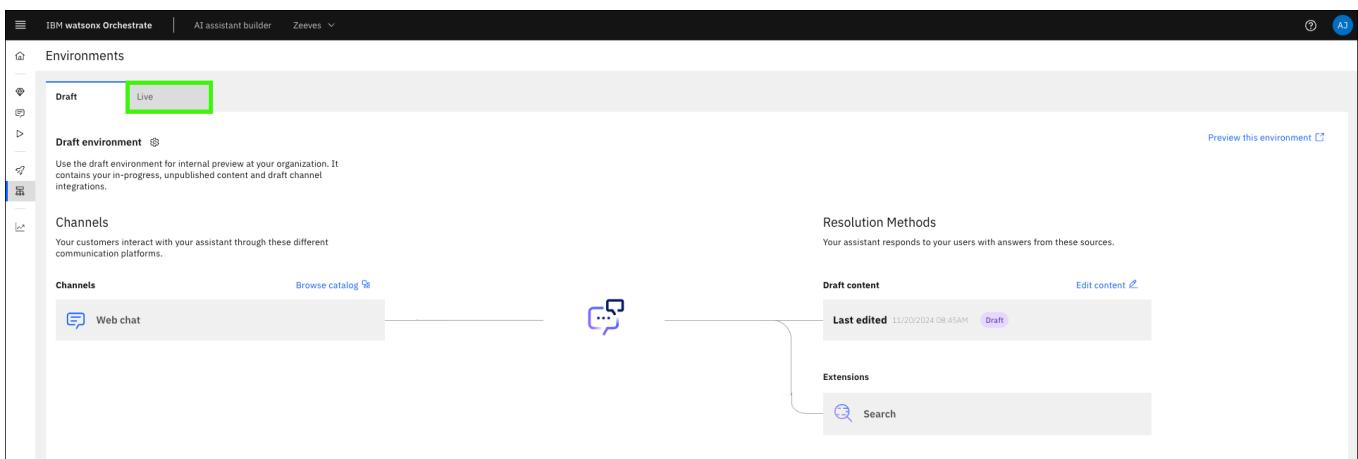

Configure the **Live** environment

When the live environment is created, the environment settings from the draft environment are not carried over (for example the configuration of the OpenSearch instance used for conversational search).

4. Hover over the **Home** icon (🏡) and click **Environments**.

5. Click **Live**.

6. Click Web chat.

The screenshot shows the 'Live environment' configuration in the IBM Watsonx Orchestrate interface. It includes sections for 'Live environment', 'Channels' (with 'Web chat' highlighted by a green box), 'Resolution Methods', 'Content' (version V1, 11/20/2024 08:52AM, set to 'Live'), and 'Extensions' (Search).

7. Customize the **Live** assistant as you see fit.

On the Style tab, you're able to set the Assistant name which will be displayed at the top of the chat window when end-users are interacting with the assistant. For pilots or demos, you may want to personalize this name for the client. Also in the Style tab, you have the ability set the themes and display settings of the chat windows, including the ability to enable the IBM Watermark and enable streaming (recommended).

On the Home screen tab, you enable and customize a default greeting message from the assistant when the user accesses the assistant chat. You're also able to set Conversation starters that will be displayed in the chat window. When selected by the end-user, the text of these conversation starters are sent as prompts, so it is important that your assistant is trained and tested to answer appropriately. It is highly recommended to remove these default conversation starters and to consider creating your own as long as they're able to be executed as actions and provide value to the end-user. At the bottom of the Home screen tab, you will also see the ability to add a Background style for the assistant chat window.

Explore all the other tabs.

Customize your Live environment.

For this lab, toggle **Streaming** on and turn **Suggestions** off on the **Suggestions** tab. You may also want to change the theme to **Dark** to differentiate your Draft and Live environments.

The screenshot shows the 'Style' tab selected in the navigation bar. The 'Suggestions' tab is highlighted with a green border. The main area contains settings for the chat UI, including:

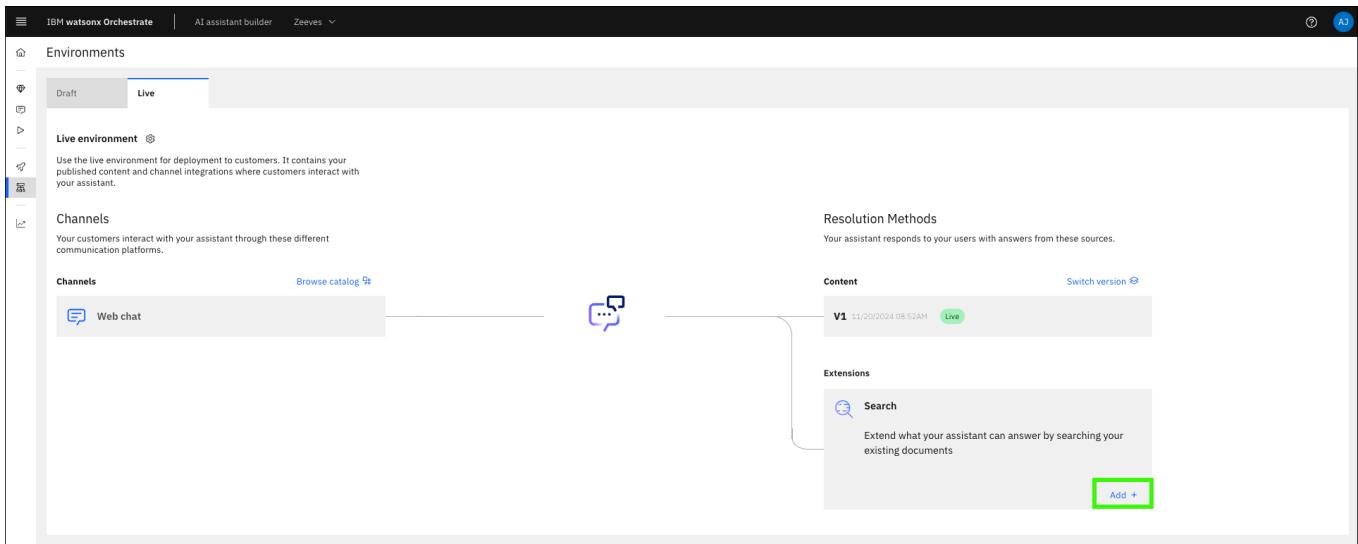

- Assistant's name as known by customers:** Zeeves 1.0
- Intended purpose:** Standard: For virtual agents and customer support experiences.
- Choose a theme:** Dark (selected)
- Primary color:** #FFFFFF
- Secondary color:** #3D3D3D
- Chat header:** User message bubble
- Accent color:** #035AE9
- Significant and interactive objects:**
- Size:** Width: 380px, Height: 640px
- IBM Watermark:** Enabled
- Streaming:** Enabled

Preview: A dark-themed chat interface titled "Zeeves 1.0" featuring a blue owl icon. It displays sample messages: "Hi! I'm a virtual assistant. How can I help you today?", "Example: Find nearby location", "Example: Check account balance", and "Example: See how I can help".

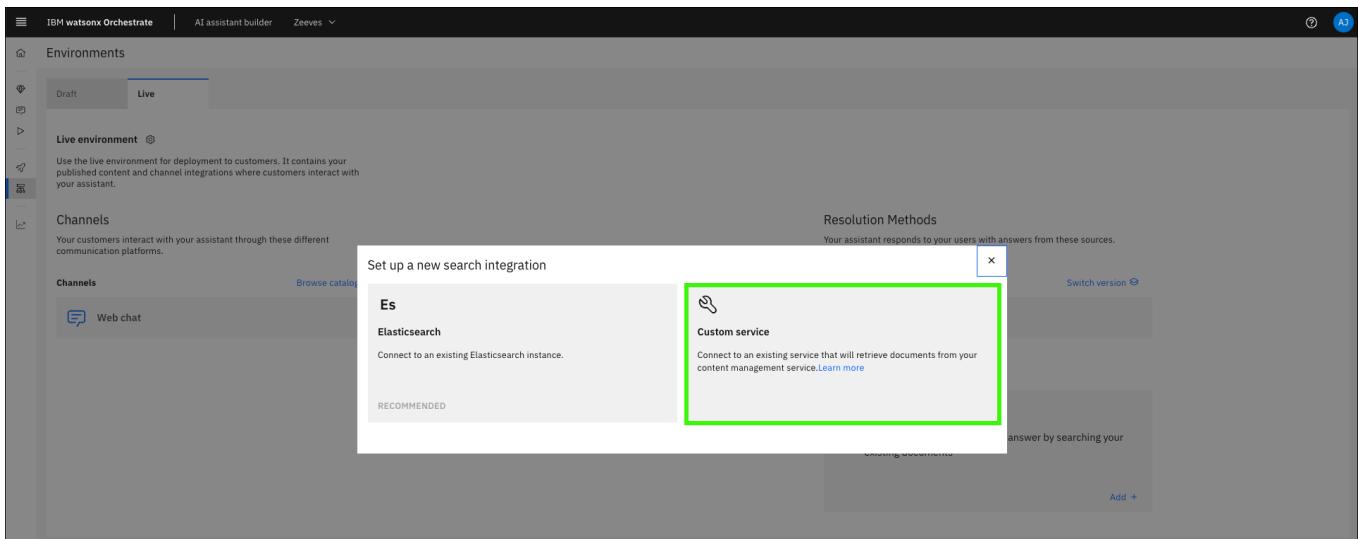

8. Click Save and exit.

The screenshot shows the 'Style' tab selected in the navigation bar. The 'Save and exit' button is highlighted with a green border. The main area and preview window are identical to the previous screenshot, displaying the same configuration and preview of the dark-themed chat interface.

9. Click Add in the Search tile.

10. Click Custom service.

11. Enter the (a) URL for your bring-your-own-search (BYOS) engine, (b) select None for the authentication type, and (c) click Next.

⚠️ Use the correct URL!

Be sure to use the URL for your BYOS OpenSearch engine created earlier [here](#).

Custom service Live

Connect service Conversational search (optional)

By providing credentials Through your client

URL
https://wxa4z-opensearch-wrapper-wxa4z-byos.apps.673cb83f0fef21364200dcb7.ocp.techzi

Choose an authentication type
None

Next

12. Verify conversational search is enabled and click **Save**.

Custom service Live

Connect service Conversational search (optional)

Enable conversational search (optional)

By enabling conversational search, your assistant can generate responses from supplied documents.

Conversational search will use a Watsonx generative AI model hosted in Dallas, TX US, to generate conversational responses. [Learn more](#)

On

By using this feature you agree to the [Pricing](#) and [Terms](#). This feature is not PCI validated. The use of this feature may impact your PCI compliance. X

What's different?

When your assistant receives a message, the default search behavior returns short excerpts of the best search results.

When conversational search is enabled, your assistant will instead generate a conversational response grounded in those search results.

Default search behavior (conversational search off)

Welcome, how can I assist you?
Can I use my points on airfare?

I searched my knowledge base and found this information which might be useful

We offer credit cards offer great liability to our clients, protecting you from having to pay for unauthorized purchases. Can I use my points on airfare? Using points and miles to book your flights is a great option. Not only do you save money, but you can use your points to book...

IBM Watsonx Lendy! Demo Site

Save

13. Update the (a) - (f) **Custom service** settings, (g) click **Save**, and then (h) click **Close**.

Feel free to customize the settings.

This is your assistant. Feel free to customize the settings. The settings shown below reflect the changes made earlier in the lab guide to the draft version of the assistant. This includes the **Metadata** field to weigh ingested client documents higher.

The screenshot shows the 'Custom service' configuration page in the IBM Watson Assistant interface. Several UI elements are highlighted with green circles and letters:

- a:** A toggle switch labeled 'On' under 'Conversational search'.
- b:** A radio button labeled 'Single turn' under 'Conversational search'.
- c:** A radio button labeled 'Lowest' under 'Retrieval confidence threshold'.
- d:** A radio button labeled 'Verbose' under 'Generated response length'.
- e:** A radio button labeled 'Lowest' under 'Response confidence threshold'.
- f:** A code block showing a JSON configuration snippet for 'Metadata'.
- g:** A 'Save' button in the top right corner.
- h:** A 'Close' button in the top right corner.

The 'Metadata' section contains the following JSON code:

```
{
  "doc_weight": 1.0,
  "product_docs": 0.2,
  "customer_docs": 0.8,
  "ibm_indices": "**.ibm_docs.state",
  "customer_indices": ".customer_**"
}
```

Learn more about publishing your assistant and creating live environments [here](#).

Deploy the assistant

After configuring your assistant's settings and publishing, the final step is to deploy your assistant which can be done across various channels depending on the use case.

There are several options for deploying your assistant through channels and integrations to satisfy the use cases that you might address. Learn more about all the deployment options [here](#).

For this lab, you will deploy the assistant using the web chat integration. The web chat integration provides an assistant interface that can integrate with your website. There is a lot of flexibility with how you may want to integrate it. Learn more about the web chat integration [here](#).

14. Click Web chat for the Live environment.

The screenshot shows the IBM Watsonx Orchestrate interface. At the top, there are tabs for 'IBM Watsonx Orchestrate', 'AI assistant builder', and 'Zeeves'. Below the tabs, there's a sidebar with icons for environments, AI, and other tools. The main area is titled 'Environments' and shows two tabs: 'Draft' and 'Live', with 'Live' being highlighted by a green box. Under 'Live', there's a section for 'Live environment' which describes it as a deployment to customers. Below that is a 'Channels' section with a 'Web chat' option, also highlighted by a green box. To the right, there's a 'Resolution Methods' section with a 'Content' tab showing 'V1' and a 'Switch version' button. Below that is an 'Extensions' section with a 'Search' button.

15. Click the Embed tab.

The screenshot shows the 'Web chat' configuration page. At the top, there are tabs for 'Style', 'Launcher', 'Home screen', 'Live agent', 'Suggestions', 'Security', 'Embed' (which is highlighted by a green box), and 'Resources'. Below the tabs, there's a section for 'Customize your chat UI' with fields for 'Assistant's name as known by customers' (set to 'Zeeves 1.0'), 'Intended purpose' (radio buttons for 'Standard' and 'Carbon for AI'), 'Choose a theme' (radio buttons for 'Light' and 'Dark'), and color selection for 'Primary color' (#FFFFFF) and 'Secondary color' (#3D3D3D). There's also a 'Change avatar image' button with a blue owl icon. To the right, there's a preview window titled 'Zeeves 1.0' showing a dark-themed chat interface with a blue owl logo and sample messages like 'Hi! I'm a virtual assistant. How can I help you today?'. Below the preview are buttons for 'Restart conversation' and 'Close'.

16. Copy and record the integrationID, region, and serviceInstanceId values.

The screenshot shows the 'Web chat' configuration page with the 'Embed' tab selected (highlighted by a green box). Below the tabs, there's a section for 'Embed on your website' with a note 'Ready to launch? It's as easy as copy and paste. Learn more'. A large green box highlights a code block containing the following variables:

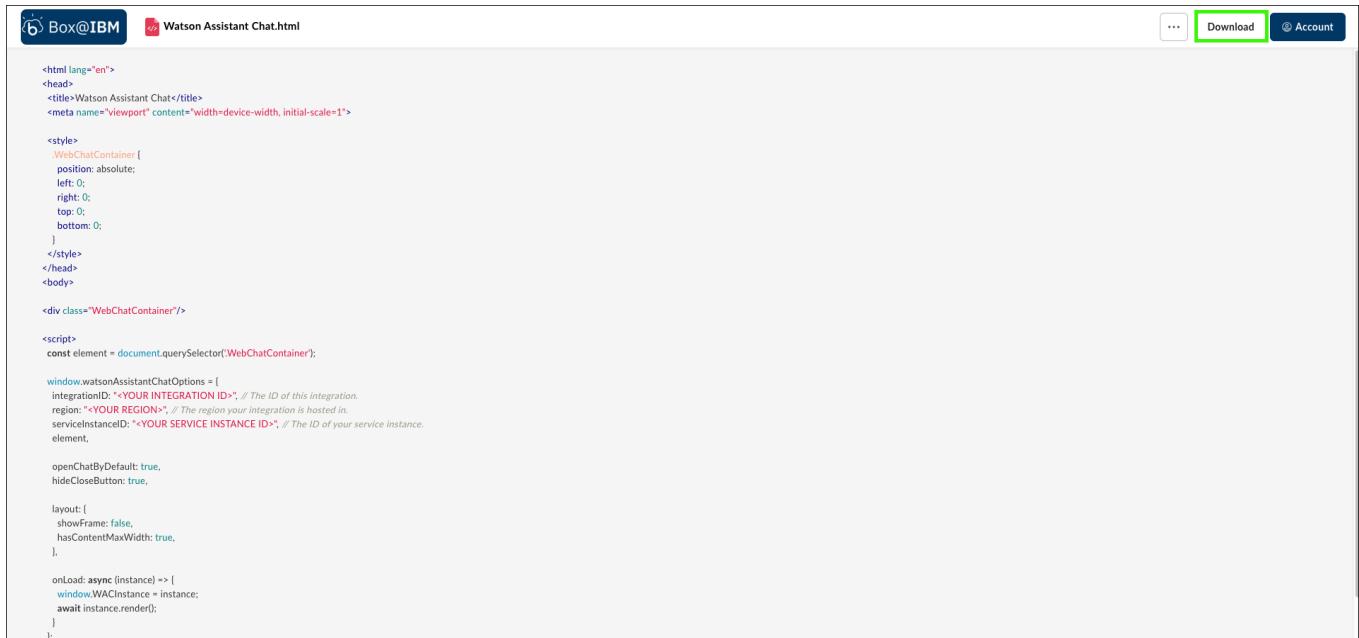

```

<script>
  integrationID: "8b4ad299-e6b9-434c-8c8c-2754d9272fe5", // The ID of this integration.
  region: "wco-us-south", // The region your integration is hosted in.
  serviceInstanceId: "7c1e3381-8df-47eb-bdf2-319f531087ba", // The ID of your service instance.
  onload: async (instance) => { await instance.initialize(); }
</script>
    
```

Below the code block is a 'Show more' button.

17. Click the link below to download a sample web chat hyper text markup language ([HTML](#)) page.

Watson Assistant Chat.html

```

<html lang="en">
<head>
<title>Watson Assistant Chat</title>

}

```

20. Open the Watson Assistant Chat.html file in a web browser.

Your assistant is now live. Explore some of the earlier prompts to verify the assistant is accessing the ingested documents and your skills and skill flows are active.

Prompts to try:

What is z/OS continuous delivery?

Get z/OS facts

Show me z/OS facts

Gather and display z/OS facts

Adding other integrations

Other integrations can be added to your assistant to allow you to publish your assistant to the channels where your end-users are likely to interact with the assistant.

To do so, channel integrations must be added. By default, a web chat integration is created, allowing an assistant to be embedded in a website. Other channel integrations are available in the Integrations catalog inside the AI assistant builder interface. Learn more about adding integrations [here](#).

Within the AI assistant builder, click on the Integrations page:

Scroll down to **Channels** to view the integration deployment options for your assistant.

Clicking on any of the available channels will provide guidance on how to configure the integration.

Next steps

This IBM watsonx Assistant for Z for Technical Sales Level 4 demonstrated several of the IBM watsonx Assistant for Z capabilities. However, there is still more to learn about IBM watsonx Assistant for Z. Be sure to check out the [offering landing page](#) and the [product documentation](#).

Also, the focus of the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide was the *end-user* use of IBM watsonx Assistant for Z. To learn more about deploying, configuring, and customizing IBM watsonx Assistant for Z explore the other capabilities that are included in the [ITZ collection](#) [here](#). Included are guidance for running client pilots and the ability to manage an IBM watsonx Assistant for Z deployment. In the Velocity Pilot environment, you can explore all the capabilities of the offering like creating an assistant, importing documents, and adding automation skills.

Earn the badge

Finally, remember to complete the IBM watsonx Assistant for Z for Technical Sales Level 4 learning plan to earn the IBM watsonx Assistant for Z Technical Sales Advanced badge.

IBM technical sellers must complete a Stand and Deliver exercise to validate their ability to demonstrate IBM watsonx Assistant for Z to potential clients. Refer to the evaluation checklist in the [YourLearning learning plan](#) for the Stand and Deliver.

Business Partners must pass the IBM watsonx Assistant for Z for Technical Sales Level 4 quiz that is located in the [IBM Training learning plan](#). The Business Partner quiz verifies use of the demonstration environment and click-through demonstrations, and not one's general knowledge of the offering.
