Welcome

Welcome to the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide (lab guide). The lab guide is part of the IBM watsonx Assistant for Z for Technical Sales Level 4 learning plan for IBM and Business Partner Technical Sales and related badge. The learning plan is intended to teach technical sellers and Business Partners how to conduct a proof of experience (PoX) for a client.

In a fast-paced world, things change...

The products and services may appear differently than what is shown in the lab guide. This can occur if the product or service is updated with a new version.

Responses generated by IBM watsonx Assistant for Z are likely to change over time. The responses you see when you run the queries in this section may differ from the screen images captured in the lab guide.

Read and follow all the directions.

It is important to read and follow all the documented steps. Skipping steps or sections can cause issues with completing the lab.

Also, invest a few minutes in reading the tips in the [Using the demonstration guide](#) section. The tips will save you time and frustration in completing the lab.

This lab guide covers the setup, configuration, and usage of watsonx Assistant for Z. This lab guide uses the [IBM watsonx Assistant for Z Velocity collection](#) and the three Velocity Pilot lab environments in IBM Technology Zone (ITZ).

The lab guide also enables dedicated lab environments for customized client PoXs and demonstrations. If you are preparing for an actual pilot engagement, refer to the [Pilot Scoping Guide for watsonx Assistant for Z](#) for additional information.

Using the lab guide, you will learn how to:

- Provision the lab environments
- Create an assistant and configuring conversational search
- Configure assistant settings
- Test conversational search
- Deploy a dedicated instance of OpenSearch for client document ingestion (Optional)
- Import skills for z/OS automations
- Connect apps to assistants
- Create assistant actions

- Create skill flows
- Publish and deploy an assistant

In addition, you will import pre-packaged z/OS skills and create custom-built skills to deliver an assistant that handles 3 use cases:

- Retrieving initial program load (IPL) information
- Managing certificates
- Resource Access Control Facility (RACF) administration support

Not all capabilities of the offering are covered in the lab guide.

This lab guide covers many features and capabilities of IBM Watson Assistant for Z, but not all. Some uncovered capabilities may be available in ITZ environments, while others may not, such as using skills for OMEGAMON.

Support

Think something is down? Check the applicable status pages for any known issues such as a site or service not being available:

- [IBM Technology Zone status](#)

For issues with provisioning the ITZ environment for this lab (for example, a failed reservation request due to insufficient quota capacity), open a ticket with ITZ support:

- Web: [IBM Technology Zone ticket system](#)
- Email: techzone.help@ibm.com

For issues related to specific steps found in the demonstration guide after the ITZ environment is provisioned, contact the authors:

- Slack:
 - [#watsonx-assistant-z-technical](#) - IBM only
 - [#wxo-practitioners](#) - IBM only - for questions that are related to the software as a service (SaaS) instance of watsonx Orchestrate
- Email: andrewj@us.ibm.com and maxwell.g.weiss@ibm.com

Business Partners, use the IBM Training live Chat Support service or other support methods that are found on the IBM Training portal [here](#).

Using the demonstration guide

Use these helpful tips to take full advantage of the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide.

Printing the demonstration guide

Printed or saved copies can be out of date

The IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide changes regularly to match the IBM watsonx Assistant for Z offering and associated ITZ environment. Printed or saved copies of the demonstration guide can become out-of-date quickly and result in failed steps.

A ready-to-print PDF version of the IBM watsonx Assistant for Z for Technical Sales Level 4 Lab Guide is [here](#).

Create a reference card for storing user IDs, passwords, and links for your ITZ environments.

You will be creating and using multiple user IDs, passwords, links, and other content throughout the lab. To save time, it is strongly suggested you create a simple text file to store this data so it is readily available and you can easily cut and paste the data when needed. Here is a template to get you started.

Reserve the IBM Technology Zone environment

IBM Watson Assistant for Z for Technical Sales Level 4 Lab Guide

Welcome

Reserve the IBM Technology Zone environment

Pilot setup >

Next steps

2. Click **Reserve now**.

The **Reserve now** option creates a reservation for immediate use. Optionally, schedule the reservation for a later date, like when you will be at your client's office.

3. Complete the reservation request and click **Submit**.

The first two reservations will be similar to the first image below and have fields **a-e** that will need to be completed.

- Optional, change the **Name** field for the reservation.
- Select the **Education** purpose tile.
- Enter a **Purpose description**.
- Select the region nearest your physical location in the **Preferred Geography** drop-down.
- The **End date and time** will be set to 2 days after the current date and time.
- Accept the IBM Technology Zone's terms and conditions and security policies.
- When satisfied with the parameters, click **Submit**.

Image highlighting

In some images, the following styles of highlighting are used:

- Solid highlight box:** This style of box highlights where to click, enter, or select an item.

- Dash highlight box:** This style of box highlights one of two things: the path to follow to get to a specific location in the user interface, or areas to explore on your own.

Copying commands and prompts

Copying and pasting commands and prompts from this demonstration guide is easy and can eliminate typographical errors.

Click the highlighted copy icon and then use your operating system's paste function. For example, **[^ Ctrl] + [V]**, or right-click and select **Paste**.

Prompt 1

What is the APF list in z/OS? Provide a detailed explanation.

Acronyms and terminology

IBM employees and the tech industry in general, tend to use acronyms. In the demonstration guide, most acronyms will appear with a dashed underline. Hover over the acronym to learn its meaning. A question mark (?) icon will first appear and after a second the tool tip with the acronym's meaning is displayed. Try it here: LPAR.

Specific guidance for IBM watsonx Assistant for Z and the ITZ environment

Following the scripts provided in the IBM watsonx Assistant for Z for Technical Sales Level 3 Demonstration Guide will help guarantee a successful demonstration. Use these tips to help insure success with IBM watsonx Assistant for Z and the ITZ environment:

- Follow the scripts in the IBM watsonx Assistant for X for technical sales Level 3 Demonstration Guide for the automations and skills to execute as expected.

Table of contents

General demonstration guidance

[Specific guidance for IBM watsonx Assistant for Z and the ITZ environment](#)

The Lab Guide table of contents

This **Demonstration Guide** uses a responsive browser-based interface to ensure pages are usable on various devices with different screen sizes. The Demonstration Guide table of contents may be displayed as highlighted in the green dashed box in this image:

The screenshot shows a browser window for the "IBM watsonx Assistant for Z for Technical Sales Level 3 Demonstration Guide". The title bar includes the course name, a refresh icon, and a search bar. On the left, a green dashed box highlights the Table of Contents sidebar. The sidebar lists chapters: Welcome, Guidance for delivering a demonstration, Reserve the IBM Technology Zone environment, Demonstration scenarios (with sub-points: Introduction to scenarios, Scenario 1: Authorized Program Facility, Scenario 2: Certificate renewal, Scenario 3: Db2 versioning, Scenario 4: Initial Program Load on Z, Additional IBM Z related prompts, Summary, Next steps, Printing the guide, and Instructions). The main content area displays the "Welcome" page, which includes an introduction to the course, information about end-user skills, and a note about Velocity Pilot information.

However, if the browser window is sized smaller, the table of contents can be accessed by clicking the main menu icon (≡):

The screenshot shows the same browser window after the main menu icon (≡) was clicked. The sidebar is now collapsed, and the main content area displays the "Welcome" page. The main menu icon is highlighted with a green box.

Click the main menu icon (≡) to expand the table of contents.

Continue to the [Reserve the IBM Technology Zone environments](#) section to begin the journey to obtain the IBM watsonx Assistant for Z Technical Sales Advanced badge.

IBM Technology Zone environment

To enable sellers to learn how to deliver client pilots of IBM Watsonx Assistant for Z, three environments are available in IBM Technology Zone (ITZ). The environments are part of the Watsonx Assistant for Z Velocity lab collection and can be found in the [IBM Watsonx Assistant for Z](#) collection.

- **Watsonx Assistant for Z lab – watsonx Orchestrate:** provides a dedicated environment on IBM Cloud where you can create and configure the assistant, set up conversational search, import skills, and configure actions.
- **Ansible Automation Platform (AAP) & z/OS:** provides a pre-configured instance of AAP and Wazi z/OS. This environment includes Ansible playbooks, which you can import as skills within Watsonx Orchestrate and connect to your assistant. Preinstalled templates for various use cases are also available (covered in later sections). Learn more about AAP [here](#). Learn more about Wazi, [here](#).
- **Single Node OpenShift with NFS storage:** provisions a single-node Red Hat OpenShift cluster (SNO) on IBM Cloud. This cluster installs a dedicated instance of [OpenSearch](#) for Watson Assistant for Z, enabling ingestion of client-supplied documents.-

All activities in this lab guide are required.

To earn the IBM Watsonx Assistant for Z Technical Sales Advanced badge and complete the Level 4 learning plan, you must provision all three ITZ environments and finish every section in the lab guide. Disregard any statements in the ITZ collection that suggest optional environments or tasks.

Follow the instructions to create new reservation requests, extend the reservations, and access the ITZ demonstration environments. Provisioning the SNO environment in ITZ can take several hours, while the other two environments typically provisioning in under 30 minutes.

Create a reservation request

1. Click each of the links that follow to open a browser to the reservation pages of the **IBM Watsonx Assistant for Z** ITZ environments.

You may be asked to authenticate to IBM Technology Zone.

The steps to authenticate to ITZ are not detailed here as they may vary between users.

[Watsonx Assistant for Z lab – watsonx Orchestrate - reservation page](#)

[Ansible Automation Platform \(AAP\) & z/OS - reservation page](#)

[Single Node OpenShift with NFS storage - reservation page](#)

The next two steps are for one of the three environments. Repeat for all three environments.

Follow the steps to create a reservation in ITZ for all three environments.

2. Select **Reserve now**.

The **Reserve now** option creates a reservation for immediate use. Optionally, schedule the reservation for a later date, for example, when you are at your client's office to start a pilot.

The screenshot shows the 'Create a reservation' page. At the top, there are four tabs: 'Select a environment/infrastructure' (selected), 'Select a reservation type', 'Fill out your reservation', and 'Complete'. Below these tabs, there is a note: 'Select your reservation type. Do you need this now or later? Single environment reservation options:' followed by two radio buttons: 'Reserve now' (selected) and 'Schedule for later'.

3. Complete the reservation request form and then click **Submit**.

The first two reservations are similar to the first image and have fields **a-e** that need to be completed.

- a.** Name: specify a name for the reservation (optional).
- b.** Purpose: select the **Education** purpose tile.

For client pilots...

For client pilots, set the **Purpose** field in the reservation to **Pilot** and provide an opportunity number to receive a longer reservation.

- c.** Purpose description: enter a description, for example: Level 4 education.
- d.** Preferred geography: select the region nearest to your physical location for improved performance and reduced network latency.
- e.** End date and time: the initial maximum will be set to two days after the current date and time. Instructions follow to extend the reservation end date.
- f.** Accept the IBM Technology Zone's terms and conditions and security policies.
- g.** Click **Submit**.

- m: Checkbox for agreeing to terms and conditions
- n: Submit button

During the provisioning process, multiple emails are sent to you from ITZ as the provisioning process runs. One email states the reservation is provisioning and the other email states that the environment is **Ready**.

In rare cases, the provisioning process can fail. If you receive an email stating the reservation failed, try again by repeating Steps 1-3 for the environment that failed to provision. In addition, review the [Troubleshooting](#) section that follows. If issues continue, open an ITZ support ticket by using the methods that are mentioned in the [Support](#) section.

Extend the reservation

When the reservations are in the **Ready** state, you can extend each reservation beyond its original end date. The duration of the extension will vary by reservation.

1. In the IBM Technology Zone portal, expand **My TechZone** and select **My Reservations**.

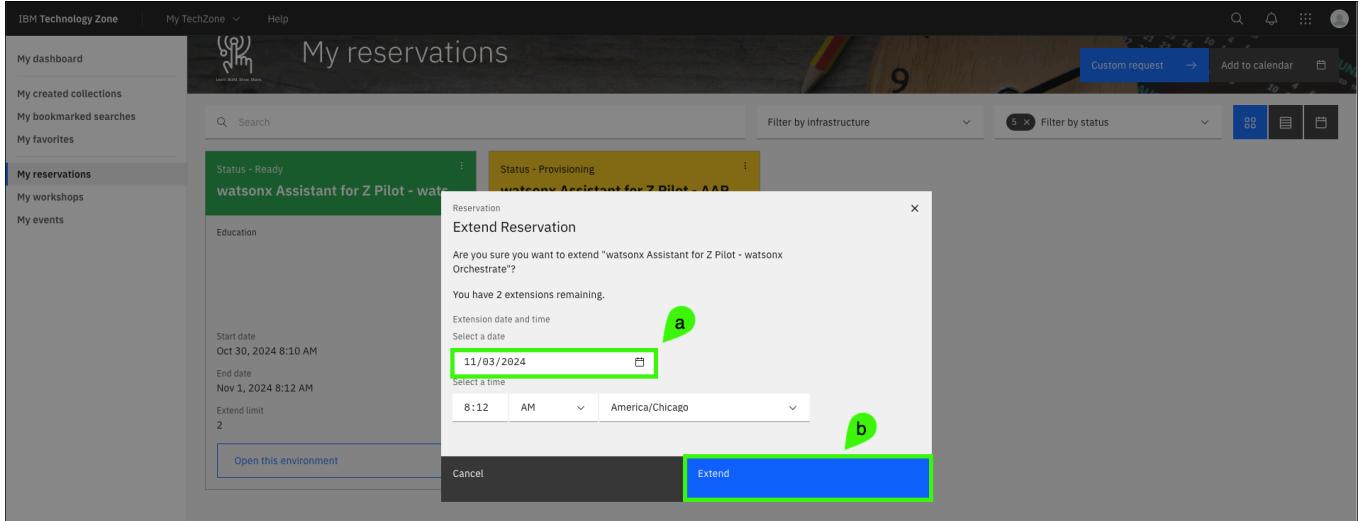

The screenshot shows the IBM Technology Zone portal interface. The top navigation bar includes 'IBM Technology Zone', 'My TechZone ▾', 'Help', and a search bar. The left sidebar has links for 'My dashboard', 'My created collections', 'My bookmarked searches', 'My favorites', 'My reservations' (which is selected and highlighted in green), 'My workshops', and 'My events'. The main content area displays a welcome message 'Welcome to Technology Zone, Andrew' and a section titled 'Certified Base Images' with the subtext 'Best starting point to build'. Below this is a diagram of a network or system architecture. The 'My reservations' section lists two items:

- watsonx Assistant**: Status - Ready. This item is highlighted with a green dashed box. Its details include:
 - Start date: Oct 30, 2024 8:10 AM
 - End date: Nov 1, 2024 8:12 AM
 - Extend limit: 2
 - Buttons: 'Open this environment' and a three-dot overflow menu icon.
- watsonx Assistant for Z Pilot - AAP ...**: Status - Provisioning. This item is highlighted with a yellow dashed box. Its details include:
 - Start date: Oct 30, 2024 8:12 AM
 - End date: Nov 1, 2024 8:10 AM
 - Extend limit: N/A
 - Buttons: 'Open this environment' and a three-dot overflow menu icon.

2. Click the **overflow icon (≡)** on the reservation tile and select **Extend**.

The screenshot shows the 'My reservations' page in the IBM Technology Zone portal. The left sidebar is identical to the previous screenshot. The main area displays the two reservations. The first reservation, 'watsonx Assistant', has its overflow menu open, with the 'Extend' option highlighted by a green dashed box. Other options in the menu include 'Reservation details', 'View collection', 'Support', 'Share', 'Transfer', 'Re-reserve', and 'Delete'. The second reservation, 'watsonx Assistant for Z Pilot - AAP ...', also has its overflow menu open, showing similar options.

3. Click the **Select a date** option, (a) specify the date to extend to, and then (b) click **Extend**.

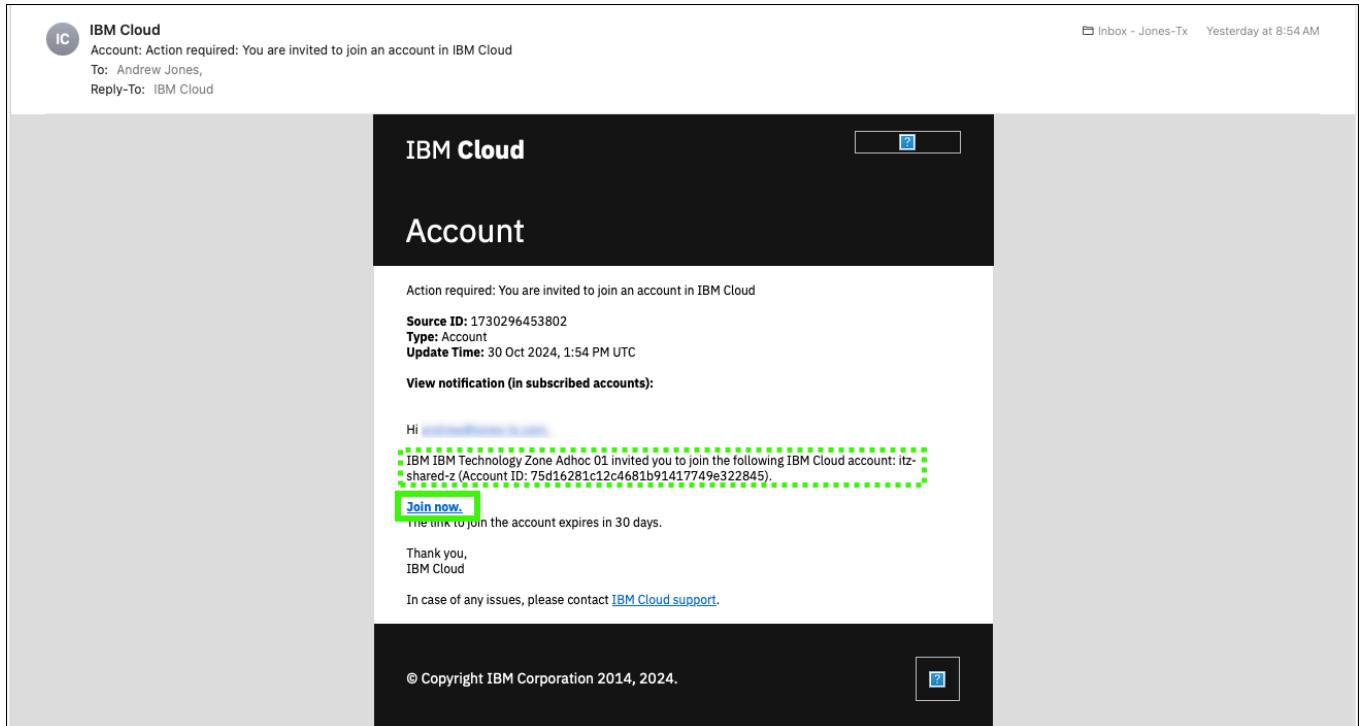

If you anticipate needing more time, repeat Steps 5-6 to extend the reservation to the maximum allowed. Repeat these steps for the other two reservations.

Join the ITZ IBM Cloud account

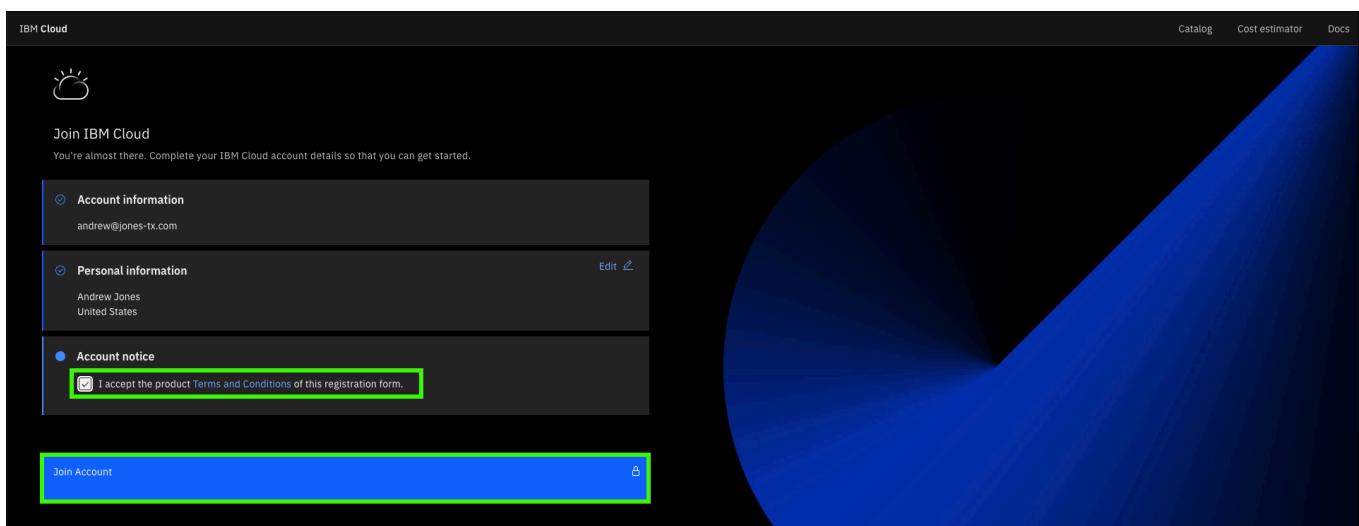

Both the **watsonx Assistant for Z lab – watsonx Orchestrate** and the **Ansible Automation Platform (AAP) & z/OS** environments add you to an IBM Cloud account while your reservation is active. During the provisioning process of these ITZ environments, you receive two emails from IBM Cloud.

You only need to accept the invitation to the **watsonx Assistant for Z lab – watsonx Orchestrate** environment.

1. Open the email from **IBM Cloud** and click the **Join now** links.

2. In the **Join IBM Cloud** browser window that opens, select the **I accept the product Terms and Conditions** of the registration form, and then click **Join Account**.

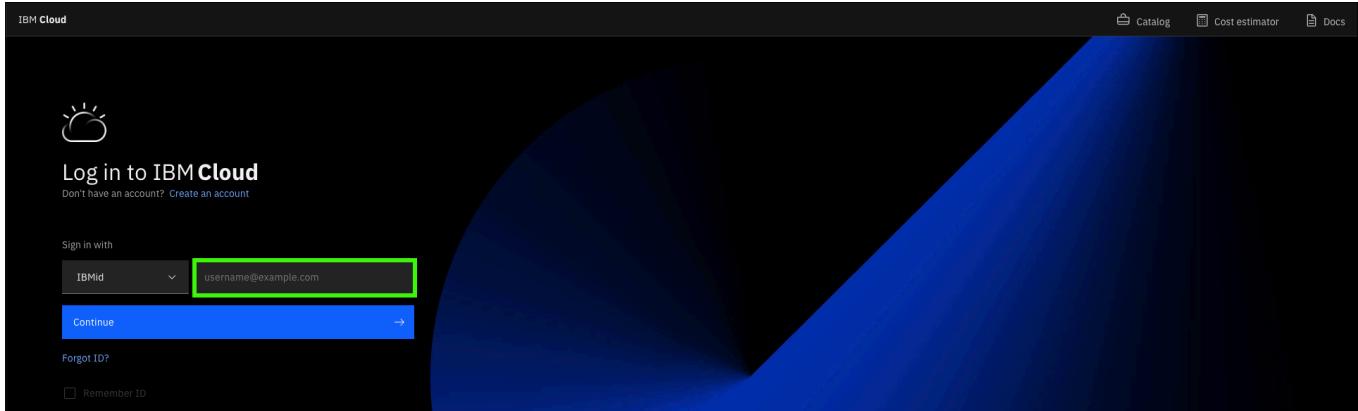

After joining the account, verify that the account appears in your available account list in the IBM Cloud portal.

- Click the following link to open a browser to the IBM Cloud portal.

IBM Cloud portal

- Follow the directions to complete the authentication to IBM Cloud using the same email address you used to login to ITZ. The login steps vary depending on any two-factor authentication methods enabled.

- Click the **account** menu and verify access to the IBM Cloud account listed in your ITZ reservation.

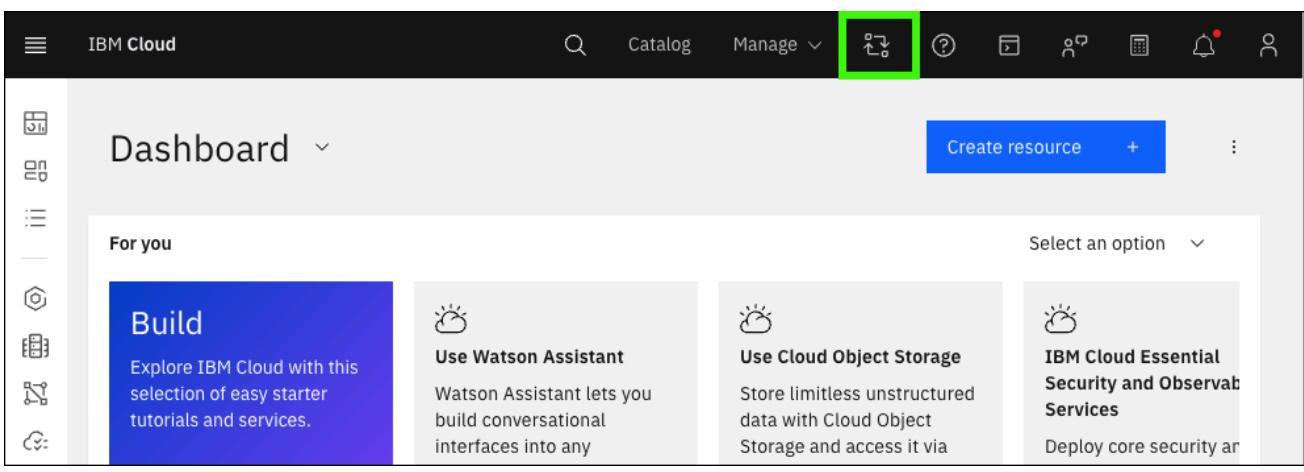

The account may be different.

The account name should align with the account named in the invitation email you received.

 Does your IBM Cloud portal view look different?

If your IBM Cloud portal looks different from the images above, it could be because the IBM Cloud portal has gone through a design change, or your browser window is set to smaller size. Instead of the current selected account appearing in the top menu, you may see this **change account** icon:  Click this icon to view the list of accounts you can access.

Accessing the environments

Each reservation provides access to its respective environment. Details for accessing each environment are provided in the **Pilot setup** sections that follow in the lab guide.

After all three reservations are in the **Ready** state and you accept the invitations to the IBM Cloud accounts, proceed to the next section to complete the pilot setup.

Troubleshooting

 If your reservation for the Single Node OpenShift environment fails...

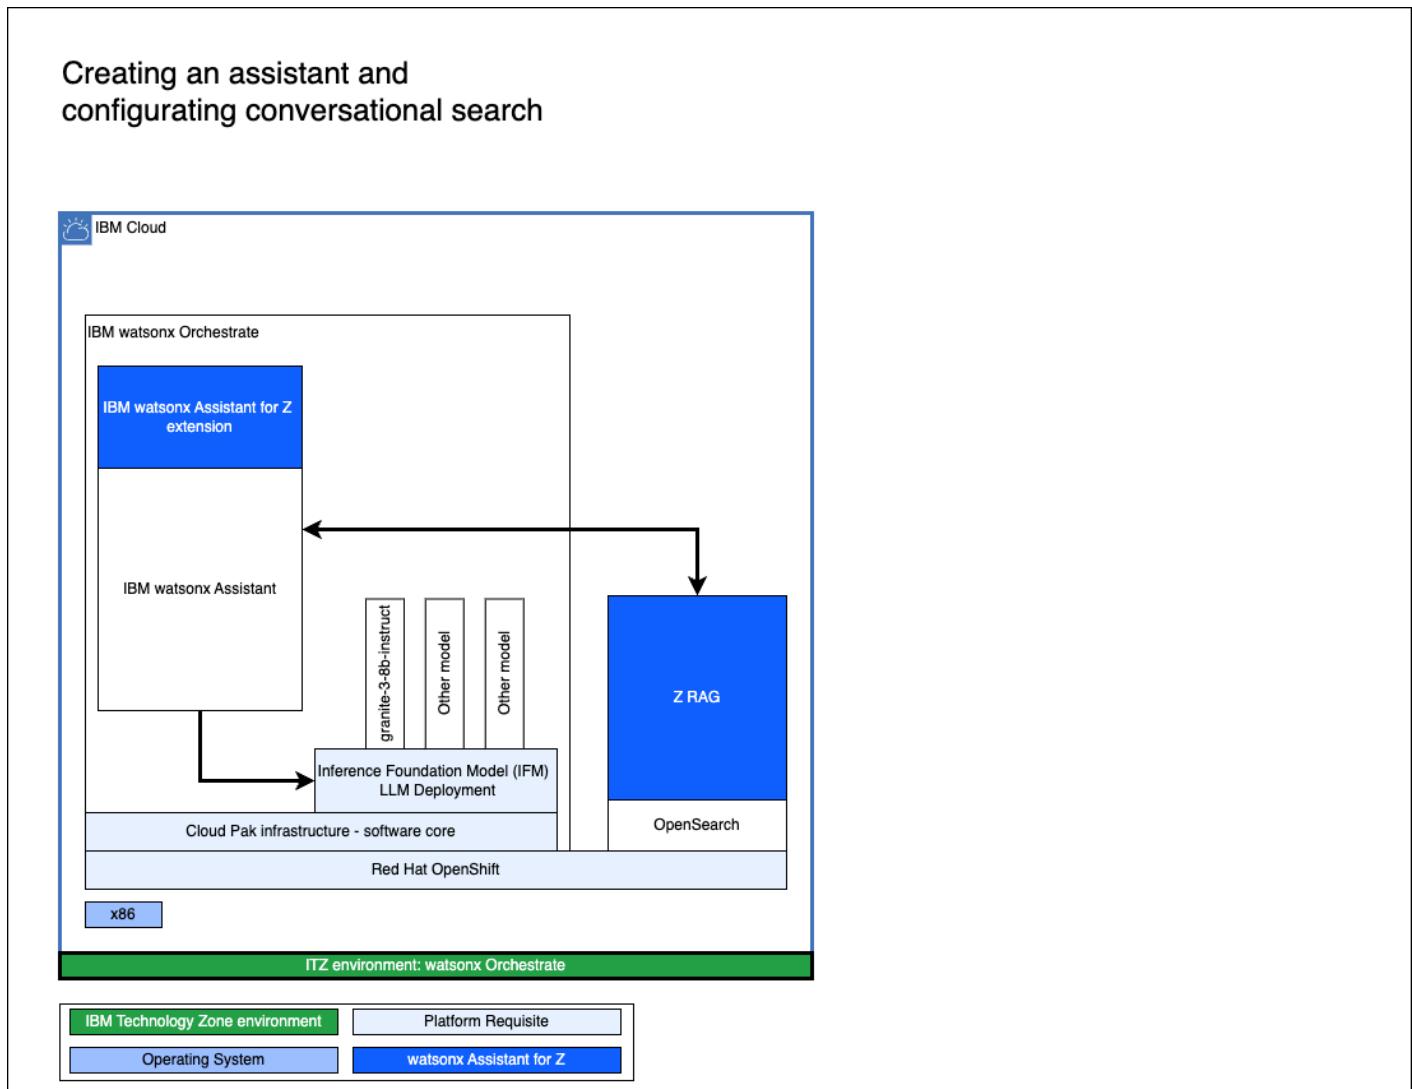

If your reservation for the Single Node OpenShift environment fails, try selecting one of the **eu-gb region** options as the **Preferred Geography**.

Creating an assistant and configuring conversational search

Watsonx Orchestrate allows you to create and configure an assistant with conversational search capabilities.

Configure your assistant to use conversational search by using a hosted [OpenSearch](#) instance. The pre-configured instance of Watsonx Orchestrate in IBM Technology Zone (ITZ) boasts over 220 knowledge sources and supports Retrieval Augmented Generation (RAG). The large language model (LLM) providing conversational AI augments this knowledge based on IBM Z documentation, generating IBM Z context-aware responses to queries with content-grounded knowledge.

A high-level, logical architecture of the environment is illustrated in the following diagram.

Access the [ITZ IBM Cloud account](#) for the Watsonx Assistant for Z Pilot environment

1. In the IBM Technology Zone portal, expand **My TechZone** and select **My Reservations**, or click the following link.

[ITZ My reservations](#)

2. Click the **watsonx Assistant for Z Pilot - watsonx Orchestrate** tile.

3. Record the ITZ IBM Cloud account name associated with the reservation.

Did you read the tip on the welcome page about creating a reference card? Check it out [here](#).

4. Click the **IBM Cloud Login** link.

Zeeves

Hi! I'm a virtual assistant.
How can I help you today?

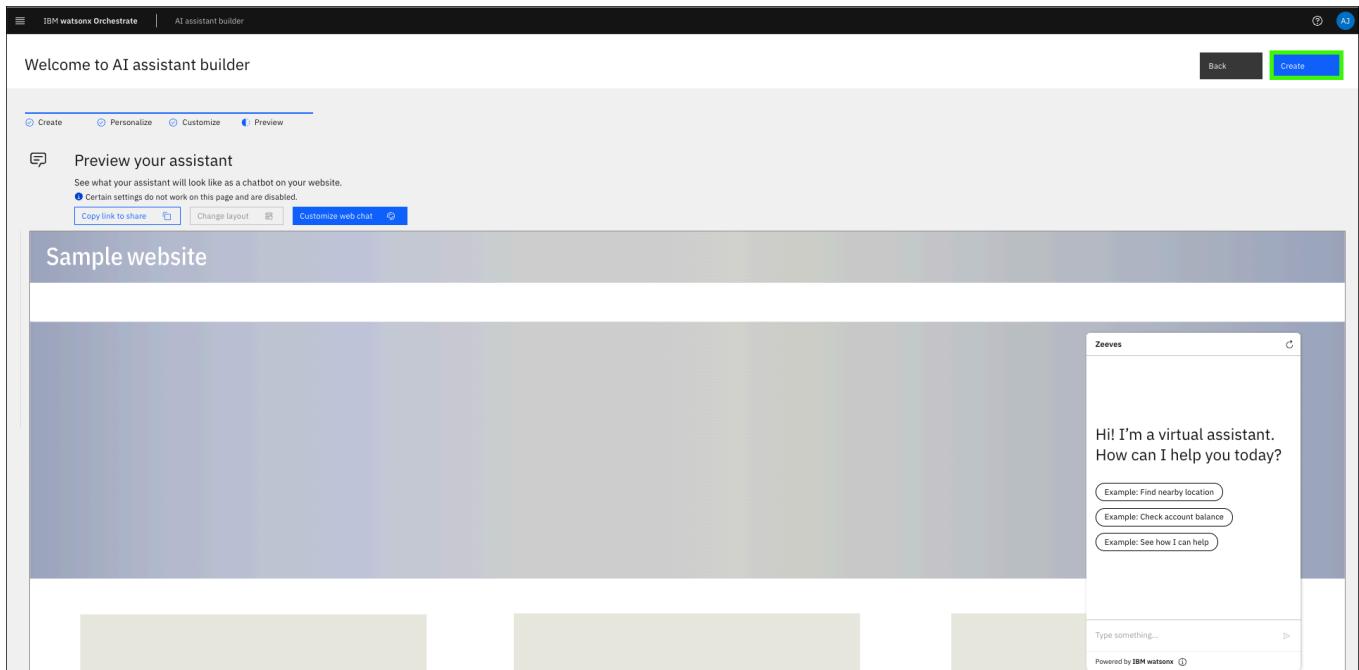

Restart conversation ➤

Example: Find nearby location
Example: Check account balance
Example: See how I can help

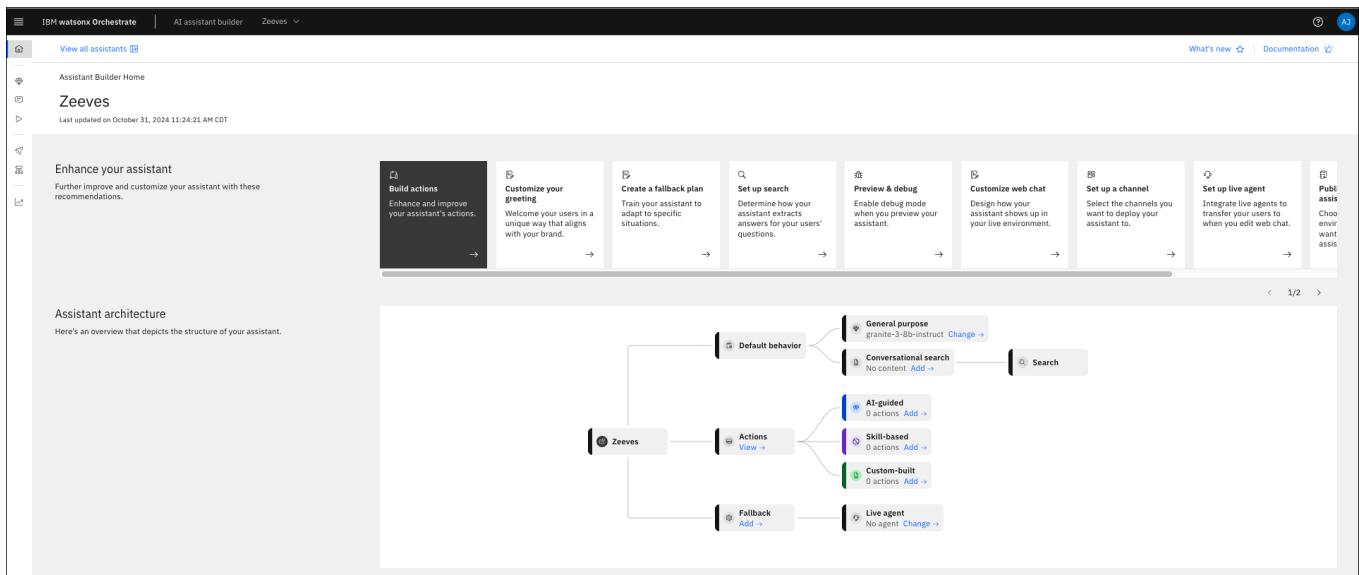

Type something... ➤

Powered by IBM watsonx

8. Preview your assistant and then click **Create**.

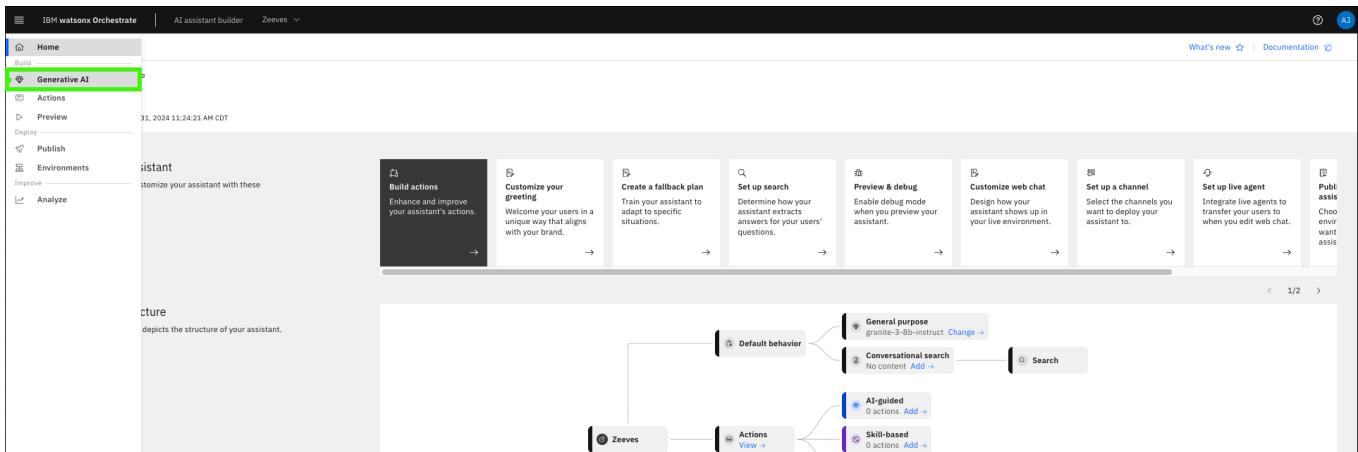

The assistant is now created.

Configure conversational search

In the next steps you will be to configure **conversational search** for your assistant that uses a hosted instance of OpenSearch.

1. Click **Generative AI** menu item (💡) in the left navigation.

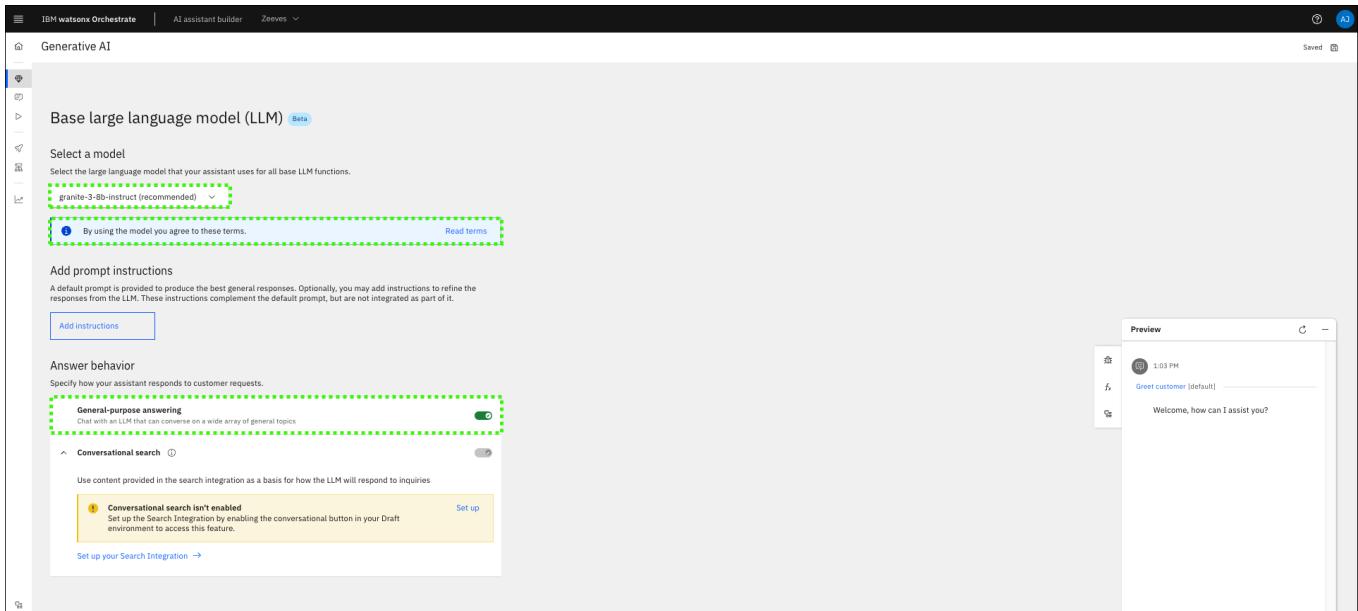

2. Select the base large language model (LLM) settings.

If available, set the LLM model to **granite-13b-chat-v2**.

Notice there are several LLM models available. **The current recommendation is for pilots, to use the granite-13b-chat-v2 model as it provides the best results in recent testing.** However, this model has been deprecated as of 2024-11-04 and will may not be available after 2025-01-19. **Note:** screen captures that follow show the **granite-3-8b-instruct** LLM as being selected.

3. Click Set up your Search Integration.

By default, conversational search is not enabled when an assistant is created. Conversational search takes priority over general-purpose answering if both are enabled. Learn more about conversational search in watsonx [here](#).

4. Click Custom service.

5. Complete the **Custom service (a-e)** form and then click **Next (f)**.

a. Select **By providing credentials**.

b. Enter the following value in the **URL** field (use the copy icon to avoid typographical errors). This is the **URL** for the shared **OpenSearch** instance. In later sections, you create and customize a dedicated instance.

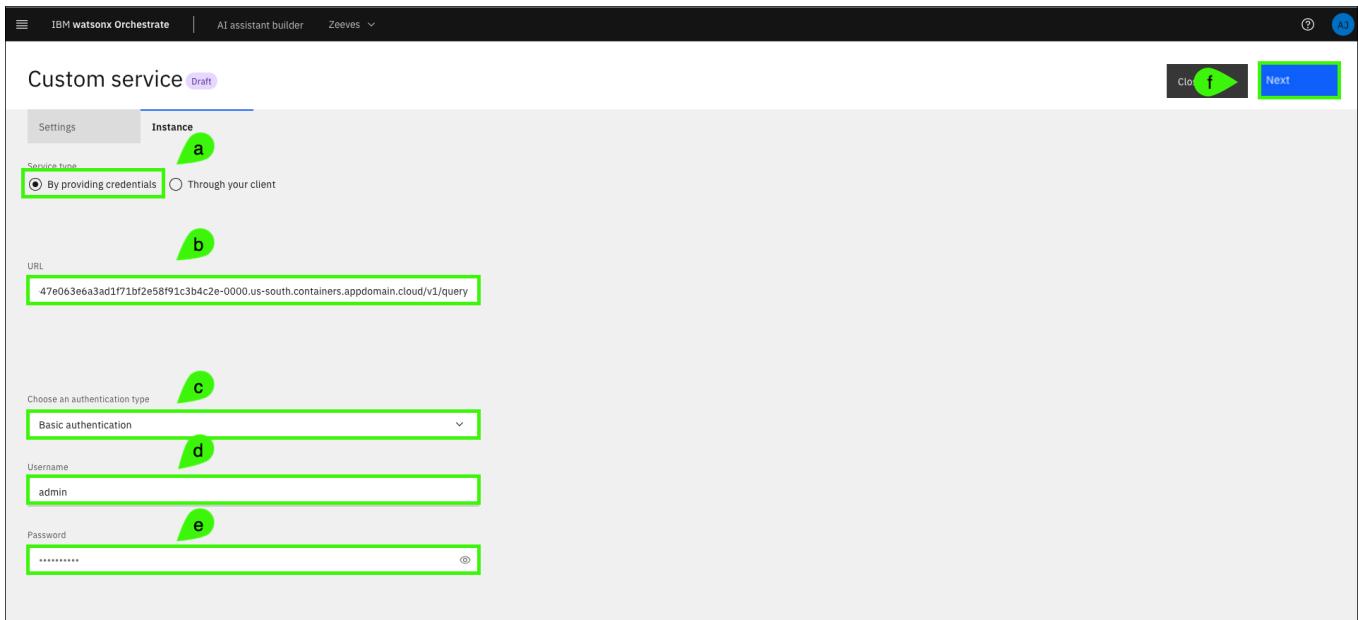

```
https://wxa4z-opensearch-wrapper-wxa4z-demo-v2-1-0.wxo4z-opc-opensearch-clus-47e063e6a3ad1f71bf2e58f91c3b4c2e-0000.us-south.containers.appdomain.cloud/v1/query
```

c. Select **Basic authentication** in the **Choose an authentication type** drop-down list.

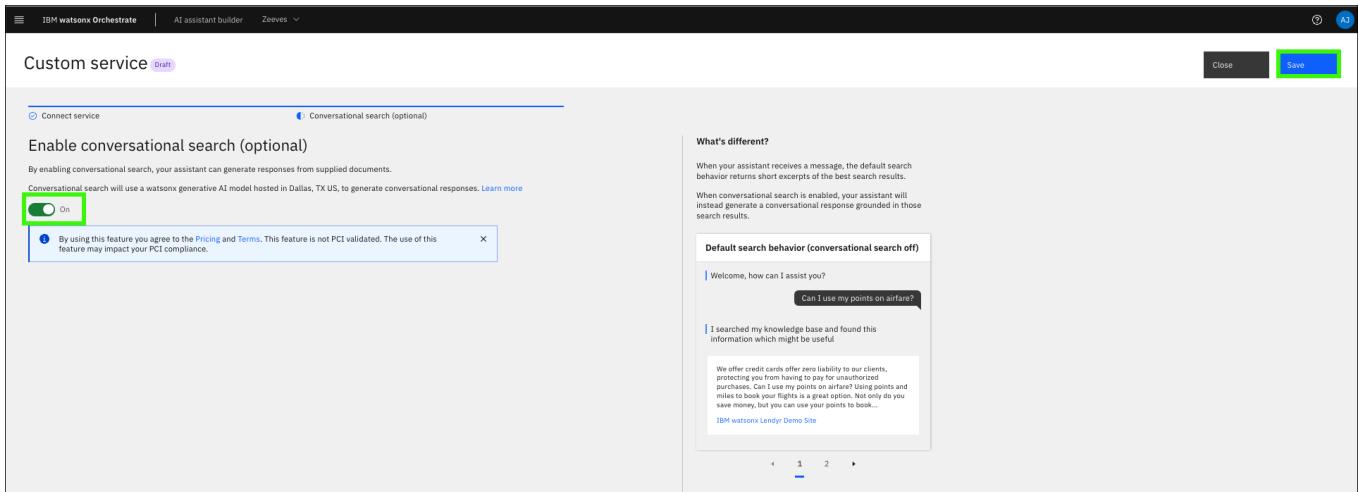

d. Enter **admin** in the **Username** field.

e. Enter **secureP@ssw0rd!** in the **Password** field.

```
secureP@ssw0rd!
```

6. Enable conversational search and then click Save.

7. Update the conversational search **custom service** settings based on your requirements.

Note: The **Settings** page is divided into two sections in the following images to enhance the visibility of the screen captures.

Learn more about these **custom service** settings [here](#).

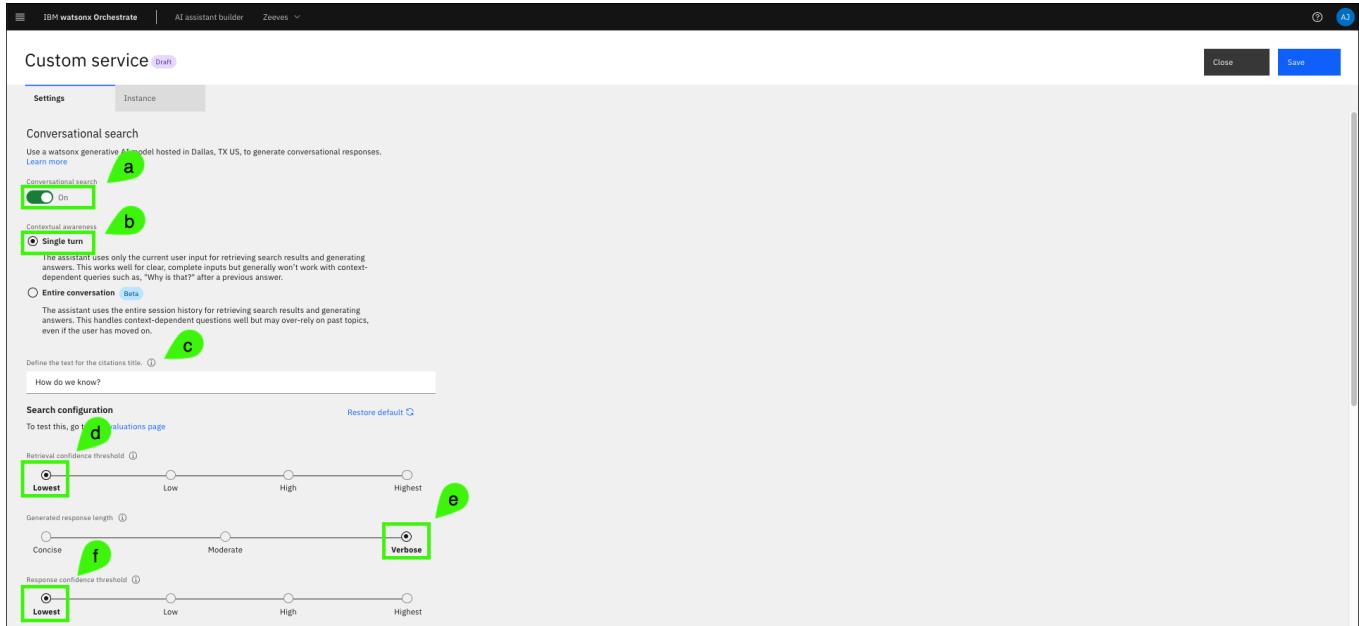

The following settings are proven to work well. You can experiment with these settings to see how they affect queries for your client's pilot.

- a. Enable **Conversational search**.
- b. Select **Single turn. Multi-turn conversation** (by selecting **Entire conversation**) is supported by the offering, but has not been fully included in the lab guide. See the callout in the [Testing conversational search](#) section below.
- c. Specify the text that appears to instruct the user to expand the list of citations in the assistant (except web chat client).
- d. Select **Lowest** for the **retrieval confidence threshold** setting. This setting checks the confidence of the retrieved citations before a response is generated.

e. Select **Verbose** for the **generated response length**. This setting affects the average response length.

Depending on user input, variations from the selected length can occur.

f. Select **Lowest** for the **response confidence threshold**. This setting checks the confidence of the generated citations after the response is generated.

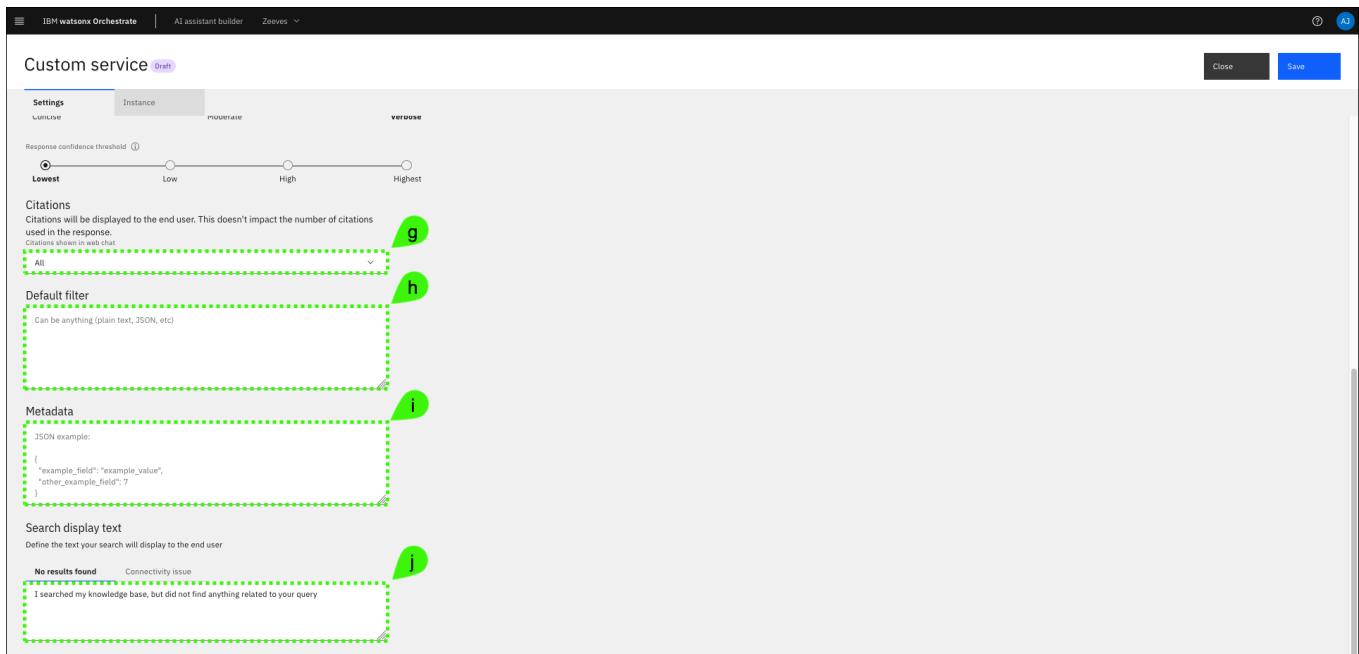

g. Keep the default setting of **All** for the listing of citations.

h. Keep the **Default filter** field empty.

i. The **Metadata** field provides a way to adjust your assistant's behavior during conversational search for your OpenSearch instance. This option is explored in detail in the [Installing and using zassist to ingest client documents](#). Leave the field empty for now.

j. The **Search display text** options specify the default text displayed when no results are found or when connectivity issues to the backend search service occur. You can keep the defaults or customize the service.

8. Click **Save** (a) and then click **Close** (b).

The screenshot shows the 'Custom service' configuration page. At the top right, there are two buttons: 'Close' and 'Save'. The 'Save' button is highlighted with a green circle labeled 'a', and the 'Close' button is highlighted with a green circle labeled 'b'.

Settings **Instance**

Conversational search

Use a watsonx generative AI model hosted in Dallas, TX US, to generate conversational responses. [Learn more](#)

Conversational search On

Contextual awareness

Single turn
The assistant uses only the current user input for retrieving search results and generating answers. This works well for clear, complete inputs but generally won't work with context-dependent queries such as, "Why is that?" after a previous answer.

Entire conversation Beta
The assistant uses the entire session history for retrieving search results and generating answers. This handles context-dependent questions well but may over-rely on past topics, even if the user has moved on.

Define the text for the citations title. (?)

How do we know?

Search configuration Restore default

To test this, go to the [evaluations page](#)

Complete the configuration

After you save and close the **Conversational search** configuration page, a few more configurations are needed to get the best experience from your conversational chat. Details on these settings are available [here](#).

1. Hover over the **Generative AI** icon () in the left navigation and click **Actions**.

The screenshot shows the 'Actions' page under the 'Generative AI' section. The 'Actions' menu item in the left sidebar is highlighted with a green box. The main area displays a language model (LLM) configuration with a 'Preview' window showing a greeting message.

Create your first action
With actions, you can help your customers accomplish their goals.

Create action +

3. Click No matches.

The screenshot shows the 'Actions' section of the AI assistant builder. A table lists various actions with their names, last edit times, example counts, and statuses. The 'No matches' action is highlighted with a green box around its row.

Name	Last edited	Examples Count	Status
Greet customer	3 hours ago	1	Green
Trigger word detected	3 hours ago	1	Green
No matches	3 hours ago	1	Green
Fallback	3 hours ago	1	Green

4. Click Step 1 under Conversation steps.

The screenshot shows the 'Conversation steps' section for the 'No matches' action. Step 1 is highlighted with a green box. It contains a condition 'No matches count <= 3' and a response 'I'm afraid I don't understand. Please rephrase your question.' Below it, there's another condition 'No matches count > 3' and a response 'Action complete'. Step 2 is listed as 'This step has no content'.

5. Select without conditions (a) in the Is taken drop-down menu and then click Clear conditions (b).

Note: the Is taken value does not change from with conditions after selecting without conditions.

The screenshot shows the configuration for Step 1. The 'Is taken' dropdown is set to 'with conditions' (a). A confirmation dialog titled 'Clear conditions?' is open, asking if the user wants to take this step without conditions. The 'Clear conditions' button is highlighted with a red box (b).

6. Delete the default text in the Assistant says entry field.

The screenshot shows the configuration for Step 1. The 'Is taken' dropdown is set to 'without conditions'. The 'Assistant says' field is highlighted with a green box. It contains the placeholder text '| or example: Please select from the following options:' and a 'Define customer response' button.

7. Expand the And then drop-down menu and select Search for the answer.

The screenshot shows the AI assistant builder interface with the 'Editor' tab selected. In the 'Conversation steps' section, step 1 is highlighted with a green dashed border. The 'Assistant says' section contains a text input field with placeholder text: 'For example: Please select from the following options:'. Below this, the 'And then' section is expanded, showing a list of actions. The 'End the action' option is selected and highlighted with a green box. A sub-menu for 'Search for the answer' is open, listing 'Continue to next step', 'Re-ask previous step(s)', 'Go to a subaction', 'Use an extension', and 'Search for the answer'. The 'Search for the answer' option is also highlighted with a green box.

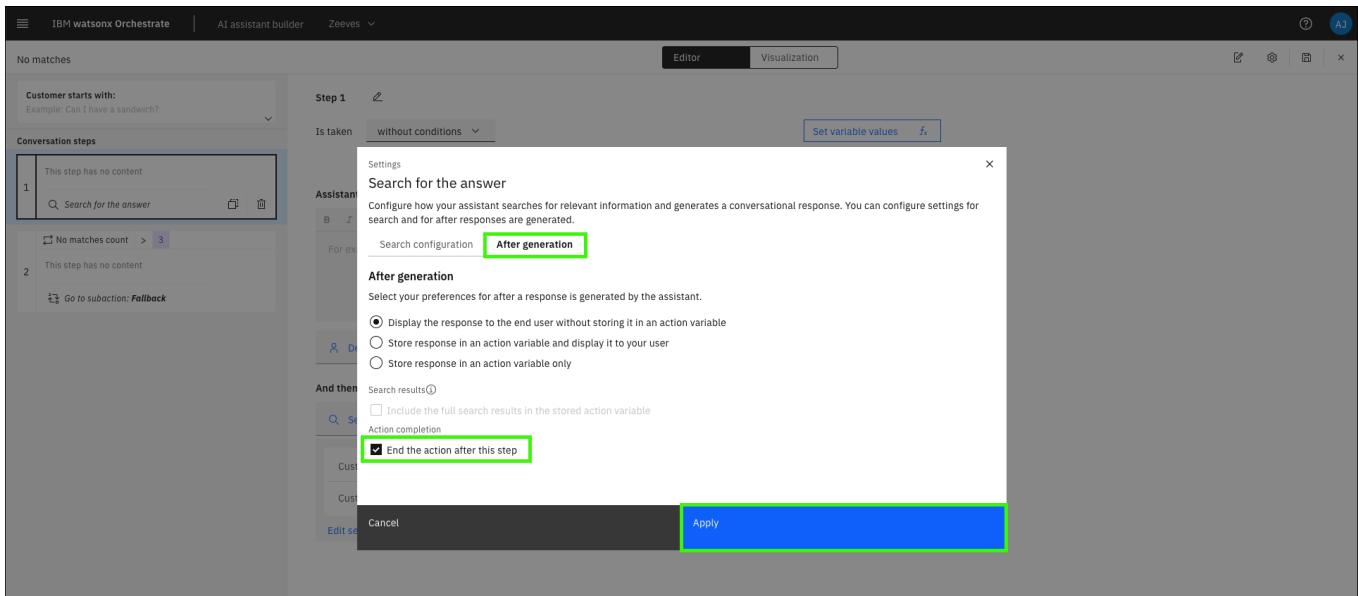

8. Click Edit settings.

This screenshot is similar to the previous one but shows the 'Edit settings' button in the 'And then' section of the 'Search for the answer' sub-menu highlighted with a green box.

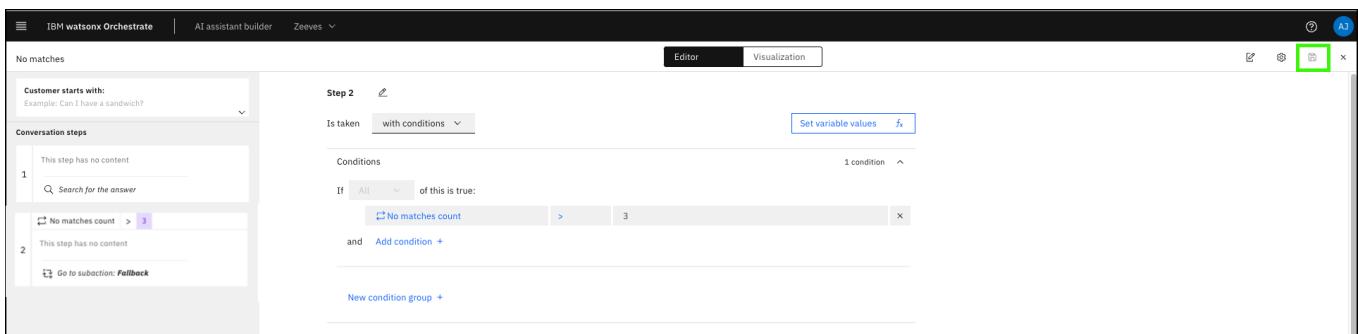

9. Click After generation.

A modal dialog box titled 'Search configuration' is displayed over the main interface. It is set to the 'After generation' tab. The 'Search configuration' section includes fields for 'Custom search query (Optional)' and 'Custom results filter'. The 'Custom results filter' section has a radio button for 'Use default' selected. At the bottom of the dialog are 'Cancel' and 'Apply' buttons, with 'Apply' being the active button.

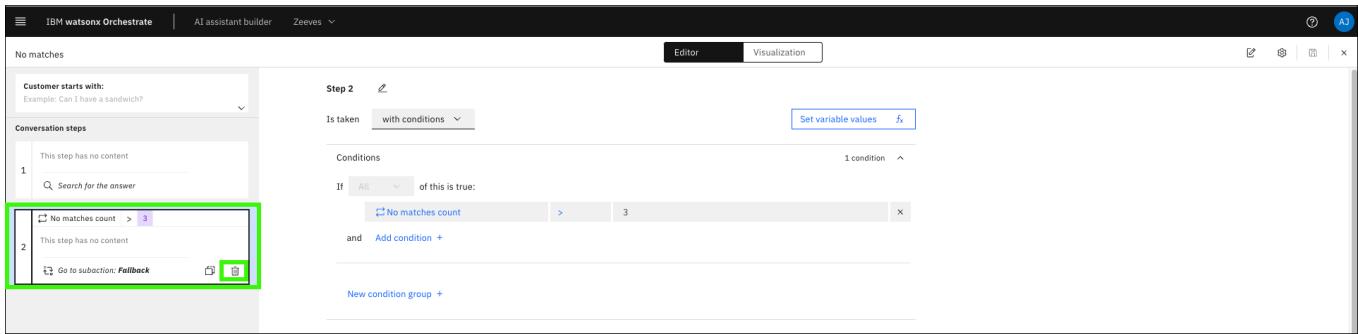

10. Select End the action after this step and then click Apply.

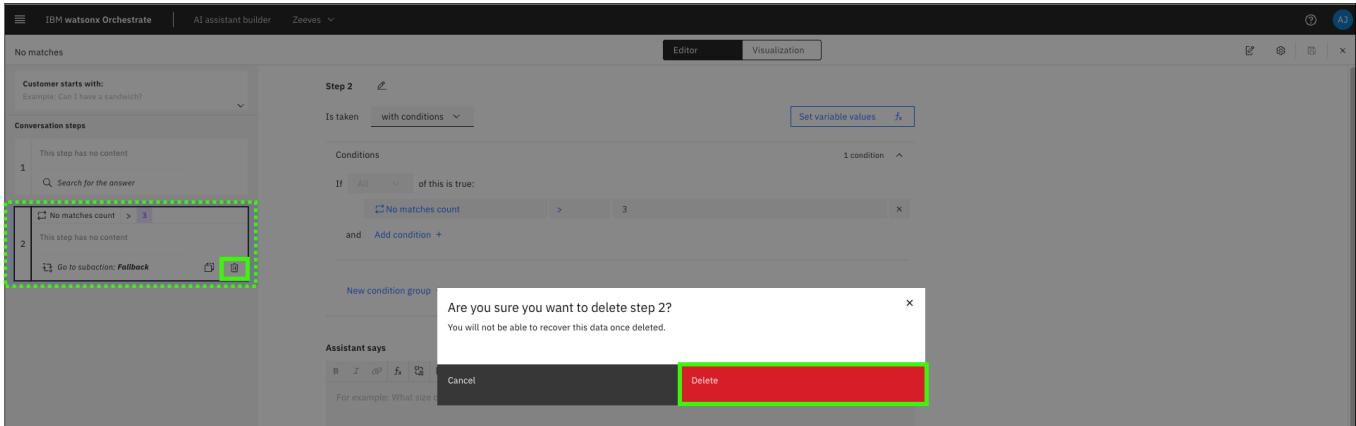

11. Click Save (💾).

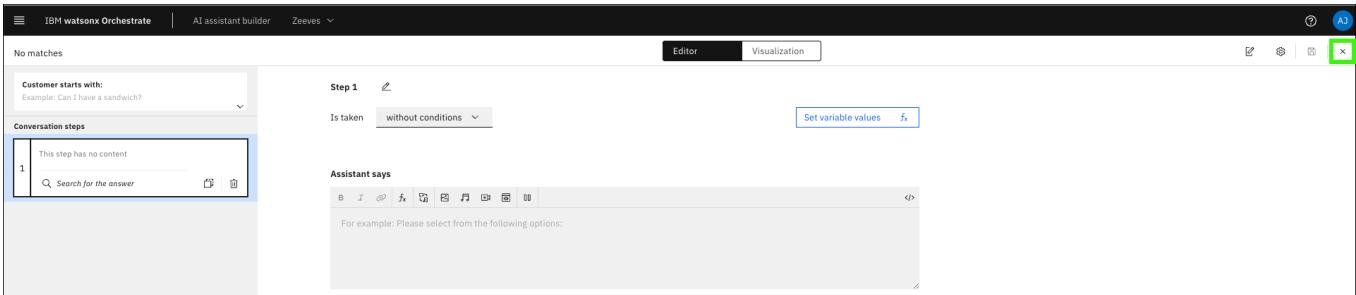

12. Select Step 2 (No matches count) under Conversation steps and click delete (🗑).

13. Click Delete in the confirmation dialog to delete Conversation step 2.

14. Click **Close** (the x icon) the **Editor** window.

15. Click **Fallback** in the **Actions** table.

Actions				
	Name	Last edited	Examples Count	Status
All items	Greet customer	3 hours ago	0	Green
Created by you	Trigger word detected	3 hours ago	0	Green
Set by assistant	No matches	a minute ago	0	Green
Variables				
Created by you				
Set by assistant				
Set by integration				
Saved responses	Fallback	3 hours ago	0	Green

16. Delete all of the **Conversation steps**.

Note: The following image is edited. Only five steps are shown, but all six need to be deleted. You need to select each step individually. Click **delete** (trash bin icon) and confirm the deletion.

Step 1

Is taken with conditions

Conditions

If All of this is true:

- Fallback reason is Failed to confirm topic return
- and Add condition +

New condition group +

Assistant says

Sorry I couldn't confirm if you wanted to return to previous topic, let me connect to an agent.

Define customer response

And then

Connect to agent (action ends)

If online Let's send you to an available agent.

If offline There are no agents available at this time. When one becomes available, we'll connect you.

17. Verify that all **Conversation steps** are deleted and then click the **x** to close the **Editor** window.

Action starts

When your customer:

- Requests to connect to agent
- Fails step validation within an action
- Reaches the limit for No matches

Use the assistant's default action or customize it.

Additional training examples for connecting to an agent

Tip: Add examples here to train your assistant on how your customer requests an agent.

18. Click the **Global settings** (⚙️).

Name	Last edited	Examples Count	Status
Greet customer	4 days ago	0	Green
Trigger word detected	4 days ago	0	Green
No matches	4 days ago	0	Green
Fallback	4 days ago	0	Green

19. Click **No matches** under the **Conversation routing** tab.

Global settings

Configure the base large language model

There are enhancements that you can make to configure how the large language model (LLM) responds to your queries, including adding prompt instructions and configuring the LLM's answer behavior. The options are summarized [here](#).

1. Hover over the **Home** (🏠) and click **Generative AI**.

2. Click Add instructions.

3. Enter a prompt instruction.

Your assistant's LLM gives refined responses by following the prompt's instructions, which clarify how to achieve the end-goal of an action.

Enter prompt instructions in the field. The maximum number of characters you can enter in the prompt instruction field is 1,000.

The following is an example prompt instruction that works well. Experiment with different prompt instructions.

You are a subject matter expert on mainframe systems. Please respond to all prompts with truth and accuracy. Keep all answers short and concise, unless requested to provide details.

Note: When the instructions are typed in, they are automatically saved and the LLM is immediately trained on them.

The screenshot shows the 'Generative AI' configuration page. In the 'Answer behavior' section, the 'General-purpose answering' toggle switch is turned on (green). Below it, the 'Conversational search' toggle switch is also turned on (green). A green box highlights the 'General-purpose answering' section. On the right, a preview window shows a greeting message: '10:47 AM Greet customer [default] Welcome, how can I assist you?'. The top right corner of the main configuration area has a 'Save' button.

4. Toggle **General-purpose answering** to **Off** and then click **Save** (💾).

The ability exists to configure the answering behavior of your assistant to provide responses that are based on the preinstalled content or general content.

On the **Generative AI** page (under **Prompt Instructions**), you see the **Answer behavior** section. After you configure **Conversational search**, you see that it is enabled (toggled on) with the search integration added.

If you enable both general-purpose answering and conversational search, conversational search answering takes precedence over General-purpose answering.

Recommendation: For purposes of retrieving Z-specific answers and responses, it is recommended that you turn off general-purpose answering and leave only conversational search turned on.

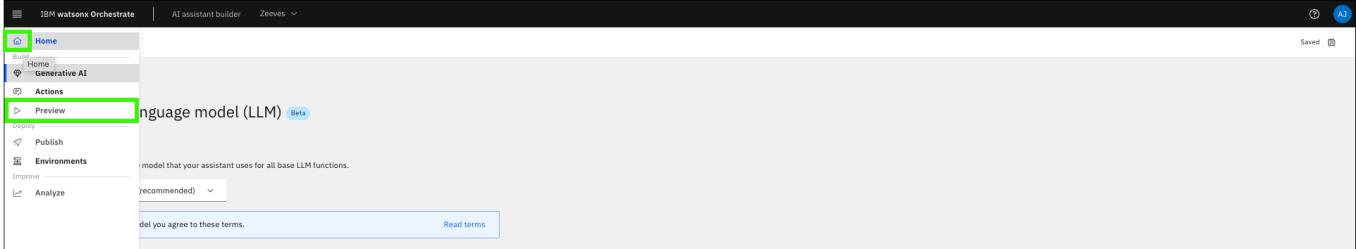

The screenshot shows the 'Generative AI' configuration page. In the 'Answer behavior' section, the 'General-purpose answering' toggle switch is turned off (gray). Below it, the 'Conversational search' toggle switch is turned on (green). A green box highlights the 'General-purpose answering' section. On the right, a preview window shows a greeting message: '10:47 AM Greet customer [default] Welcome, how can I assist you?'. The top right corner of the main configuration area has a 'Save' button, which is highlighted with a green box.

Testing conversational search

Now, you can begin issuing queries to test the assistant's responses. For more detailed responses, try appending "Please provide a detailed response." to the end of your question.

Important: Modify settings iteratively based on your assessment of response quality. Review and change them at any time. For example, add extra prompt instructions, change response verbosity, and modify OpenSearch indexes.

1. Hover over the **Home** () and click **Preview**.

2. Experiment with different prompts and validate that the answers are reasonable and related to IBM Z.

Other prompts and responses follow.

Note: The responses that you receive can vary from the ones shown.

Prompt:

What is z/OS continuous delivery?

Example output:

Prompt:

What is the APF list in z/OS? Provide a detailed explanation?

Example output:

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with icons for preview, AI assistant builder, and Zeeves. The main area is titled "Sample website". On the right, there's a "Zeeves" chat window. The chat history shows a user asking "What is the APF list in z/OS? Provide a detailed explanation?" and the AI assistant responding with a detailed explanation of the APF list, mentioning its purpose in controlling access to system resources and how it can be managed using system commands and macros.

Prompt:

Why is Db2 different than other database systems?

Example output:

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with icons for preview, AI assistant builder, and Zeeves. The main area is titled "Sample website". On the right, there's a "Zeeves" chat window. The chat history shows a user asking "Why is Db2 different than other database systems?" and the AI assistant responding with an explanation, mentioning that Db2 is a database management system (DBMS) that runs under the z/OS operating system, which is specific to mainframe computers. It also notes that other database systems may run on various operating systems like Linux, Unix, or Windows. Additionally, Db2 provides a higher level of data management and security features compared to other database systems, as it manages data stored in databases and controls access to the data.

Prompt:

What happens during an IPL on IBM Z?

Example output:

The screenshot shows the IBM Watson Assistant AI assistant builder interface. At the top, there are tabs for 'IBM Watson Orchestrate', 'AI assistant builder', and 'Zeeves'. Below the tabs, a header bar includes 'Preview assistant' and several action buttons: 'Copy link to share', 'Change layout', 'Change background', and 'Customize web chat'. The main area is titled 'Sample website' and contains three large, light-grey rectangular boxes. To the left of these boxes is a vertical toolbar with icons for preview, edit, and other functions. On the right side of the screen, there is a separate chat window titled 'Zeeves'. The chat window shows a message from 'You' at 11:05 AM asking 'What happens during an IPL on IBM Z?'. A green box highlights the response message from 'IBM Watson Assistant' which reads: 'During an IPL (Initial Program Load) on IBM Z, the system's operating system is loaded into memory and begins executing it. This process can be initiated from various sources, such as the Support Element (SE), Hardware Management Console (HMC), an open systems host, or a z/OS host. The IPL can be used to load a new operating system, recover from a system failure, or perform maintenance tasks. The type of IPL determines whether the Primary Link Pack Area (PLPA) is reloaded and whether VTO data set pages are preserved.' Below the response is a note: 'Accuracy of generated answers may vary.' At the bottom of the chat window is a text input field with 'Type something...' and a 'Powered by IBM Watson' footer.

Experiment with multi-turn (entire conversation) contextual awareness.

In the December 2024 release of IBM watsonx Assistant for Z support for multi-turn contextual awareness was added. This capability enables the assistant to use an entire session history for retrieving search results and generating answers. This handles context-dependent questions well but may over-rely on past topics, even if the user has moved on.

Experiment with this setting by changing your custom service contextual awareness setting from **Single turn** to **Entire conversation**.

The screenshot shows the 'Custom service' settings page in the IBM Watsonx Orchestrate AI assistant builder. The 'Contextual awareness' section is expanded, showing two options: 'Single turn' and 'Entire conversation'. The 'Entire conversation' option is selected and highlighted with a green border. A callout box provides a detailed description of how this feature works, stating: 'The assistant uses only the current user input for retrieving search results and generating answers. This works well for clear, complete inputs but generally won't work with context-dependent questions such as "What is that?" after a previous answer.' Below this, there is a 'Search configuration' section with a 'Restore default' button.

Once enabled, try sequential prompts like:

What are some features of z/OS?

Give me an itemized list?

Tell me more about item 3.

You have a working assistant that uses IBM Watson Assistant for Z. Explore different prompt instructions and settings. If you encounter issues, refer to the Troubleshooting section that follows for resolution.

Continue to the [Creating a stand-alone OpenSearch instance for document ingestion](#) to learn how to configure a dedicated OpenSearch instance for ingesting client-specific documentation into the RAG model.

Troubleshooting

The following are issues that you may encounter. If the provided resolutions do not work, contact support by using the methods that are mentioned in the [Support](#) section.

 **Assistant responds to all prompts with, "I might have information related to your query to share, but am unable to connect to my knowledge base at the moment"** 

This Assistant is unable to connect to the custom service URL specified. This could be a network issue, the service may be down, the service may be restarting, or the service is no longer running at that URL.

Before reaching out to [Support](#), try the following:

- Wait a few minutes and try again. It may be the service was in the process of restarting.
- If you printed this demonstration guide or saved a copy, verify you are using the most current version of the [lab guide](#) and the correct service URL (<https://wxa4z-opensearch-wrapper-wxa4z-demo-v2-1-0.wxo4z-opc-opensearch-clus-47e063e6a3ad1f71bf2e58f91c3b4c2e-0000.us-south.containers.appdomain.cloud/v1/query>). The URL may have changed since you saved or printed the lab guide.

Bring your own search and documents

Creating a stand-alone OpenSearch instance for document ingestion

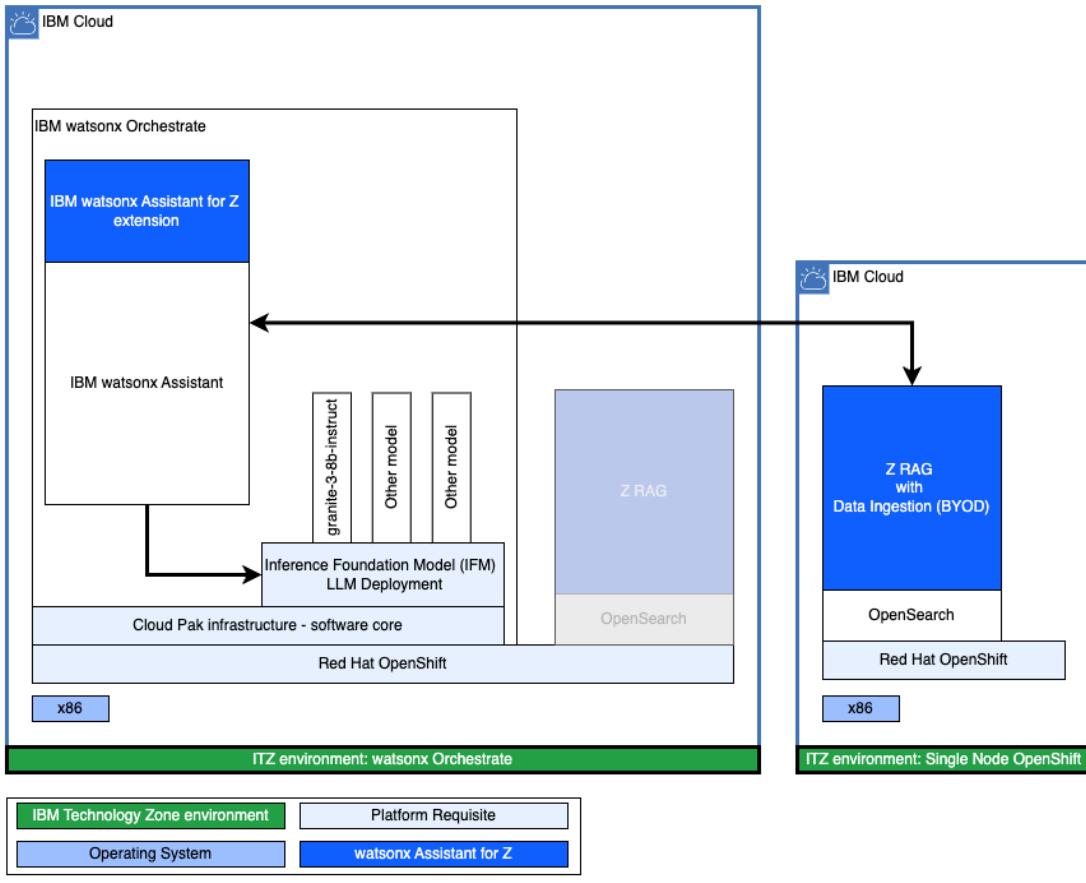

Now that you created and deployed your own assistant with conversational search capabilities, your client can understand how watsonx Assistant for Z provides its content-grounded responses to any Z-related questions. In the previous section, you configured your assistant to use a pre-configured Z RAG that has over 220 knowledge sources, and uses this knowledge to provide AI-generated responses.

Next, learn to enable clients to personalize the assistant with an internal knowledge base that contains documentation they add to the Retrieval Augmented Generation (RAG). This helps provide a level of context-awareness for their own environment when environment-specific questions are asked to the assistant.

Now, install and configure a “Z RAG” on Red Hat OpenShift enabling the bring-your-own-search (BYOS) and bring-your-own-documentation (BYOD) capability to ingest other documentation. In doing so, you deploy a dedicated OpenSearch instance (BYOS). Then, connect your assistant to the new RAG database to provide responses based on the ingested documentation (BYOD).

Below is a high-level, logical architecture of the environment deployed in this section.

Creating a stand-alone OpenSearch instance for document ingestion

Earlier, you provisioned three IBM Technology Zone (ITZ) environments. One of which was a single-node Red Hat OpenShift (SNO) cluster. If you have not reserved this environment, or it is not in the **Ready** state, return to the [IBM Technology Zone environment](#) section to complete the reservation.

Install the Red Hat OpenShift command line interface utility

The Red Hat OpenShift command line interface (CLI) utility, which is known as **oc**, must be installed on your local workstation. If you already installed the **oc** utility, you can proceed to [log in to the SNO cluster](#).

1. Click the following link to open a browser window to your ITZ reservations.

[ITZ My reservations](#)

2. Click the **Single Node OpenShift** tile.

My reservations

- Single Node OpenShift (VMware on IBM Cloud)
- watsonx Assistant for Z Pilot - AAP & z/OS
- watsonx Assistant for Z Pilot - watsonx O...

Build and Deploy Commands:
  rollout          Manage a Kubernetes deployment or OpenShift deployment
  config           Revert part of an application back to a previous deployment
```

Mac/OS users may need to adjust security settings.

The **oc** binary may cause a security exception. Adjust the security settings by opening the **System Settings** utility and clicking **Privacy & Security**. Under **Security** locate the message about the **oc** binary and click **Allow Anyway**. Return to the terminal window and try the `oc --help` command again and click **Allow Anyway** when prompted.

Prepare to ingest documents

Before ingesting documents, complete the following setup steps.

Log in to the OpenShift cluster from your local terminal

Note: If you just installed the **oc** utility, skip the next 5 steps.

1. Click the following link to open a browser window to your ITZ reservations.

[ITZ My reservations](#)

2. Click the **Single Node OpenShift** tile.

3. Scroll to the bottom of the reservation page and record the **Cluster Admin Username** and **Cluster Admin Password**.

4. Click the **OCP Console** link.

5. Enter the **Cluster Admin Username** and **Cluster Admin Password** values from step 3 and click **Log in**.

6. Click the **kube:admin** profile drop-down and click **Copy login command**.

7. Click **Display Token**.

8. Select and copy the **Log in with this token** string.

For most operating systems, double-click the value, then right-click and select **Copy**.

Your API token is
sha256~zuWR0KDnkYniIY0m8g8iKoUXPdFFFmou~o4s5FsrDNA

Log in with this token

```
oc login --token=sha256~zuWR0KDnkYniIY0m8g8iKoUXPdFFFmou~o4s5FsrDNA --server=https://api.672b79320c7a71b728e523b4.ocp.techzone.ibm.com:6443
```

Use this token directly against the API

```
curl -H "Authorization: Bearer sha256~zuWR0KDnkYniIY0m8g8iKoUXPdFFFmou~o4s5FsrDNA" "https://api.672b79320c7a71b728e523b4.ocp.techzone.ibm.com:6443/v1/users/~"
```

Request another token

[Logout](#)

A context menu is open over the token value, with 'Copy' highlighted.

9. Open a command prompt or terminal window on your local workstation.

10. Paste the login command and press **enter**.

```
andrewjones@Andrews-MBP ~ % oc login --token=sha256~mJ4L8K6cUMyNyk2Z69KMm3vbP1sWc8SW0eeOdVqtA94 --server=https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443
Logged into "https://api.672371d38376796fb96a6c4d.ocp.techzone.ibm.com:6443" as "kube:admin" using the token provided.
You have access to 70 projects, the list has been suppressed. You can list all projects with 'oc projects'
Using project "default".
andrewjones@Andrews-MBP ~ %
```

Create a working directory

1. Create a directory to store the configuration files that you will create in the next steps.

Instructions vary by your local workstation's operating system.

The directions that follow may vary depending on your operating system. The examples provided are based upon MacOS.

```
mkdir watsonxAssistant
```

2. Change to the new directory.

```
cd watsonxAssistant
```

```
andrewjones@Andrews-MBP ~ % cd watsonxAssistant
andrewjones@Andrews-MBP ~ % ls
andrewjones@Andrews-MBP ~ %
```

Install IBM Certificate Manager on Red Hat OpenShift

1. In a text editor, create a file that is named `catalogCertManager.yaml` and paste the following text in the file.

Formatting of the yaml file is critical!

The content of the YAML file must be formatted exactly as shown. Use the **Copy** icon to prevent typographical errors.

File name:

```
catalogCertManager.yaml
```

File contents:

```
apiVersion: operators.coreos.com/v1alpha1
kind: CatalogSource
metadata:
  name: ibm-cert-manager-catalog
  namespace: openshift-marketplace
spec:
  displayName: ibm-cert-manager-4.2.7
  grpcPodConfig:
    securityContextConfig: restricted
    image: icr.io/cpopen/ibm-cert-manager-operator-
catalog@sha256:4dcf4ace4b5f166f83b31063f7e6404dbf78d8e98a9d4fcf52fedf576a55ca6c
  publisher: IBM
  sourceType: grpc
  updateStrategy:
    registryPoll:
      interval: 30m0s
```

2. Install the IBM Certificate Manager operator in the Red Hat OpenShift cluster.

```
oc apply -f catalogCertManager.yaml
```

The preceding command returns a message that states the **ibm-cert-manager-catalog** was created.

3. In the OpenShift web console, click **Operators** and then select **OperatorHub**.

The screenshot shows the Red Hat OpenShift web console interface. The left sidebar has a navigation menu with items like 'Administrator', 'Home', 'Operators' (which is currently selected), 'OperatorHub' (which is also selected), and 'Installed Operators'. The main content area has a heading 'Command Line Tools' and a sub-section 'oc - OpenShift Command Line Interface (CLI)'. It provides instructions for using the CLI and links to download it for various platforms. At the top of the main content area, there is a message: 'You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.'

4. Click the **Project** to pull-down menu and click the **Show default projects** toggle.

The screenshot shows the Red Hat OpenShift OperatorHub interface. On the left, there's a navigation sidebar with options like Home, Operators, Workloads, Networking, etc. The 'OperatorHub' section is currently selected. In the main area, there's a dropdown menu labeled 'Project: All Projects'. A green box highlights this dropdown. Below it is a search bar with the placeholder 'Select project...'. There's also a toggle switch for 'Show default projects'. The main content area lists 'Projects' under 'All Projects', including 'default', 'kube-node-lease', and 'kube-public'. At the bottom right, it says '624 items'. Navigation tabs at the bottom include 'Community', 'Marketplace', and 'Community' again.

5. Scroll down and select openshift-marketplace.

This screenshot shows the same interface as the previous one, but the 'openshift-marketplace' operator has been selected from the list of installed operators. A green box highlights this selection. The list includes other operators like 'openshift-kube-controller-manager-operator', 'openshift-kube-scheduler', etc. The main content area now displays a grid of tiles for various operators, including CrowdStrike, Hazelcast, and Red Hat. Each tile provides a brief description and a 'View Details' button. The overall layout remains consistent with the previous screenshot.

6. Enter IBM Cert Manager in the search field and then click the IBM Cert Manager tile.

Be patient.
It may take a minute or two for the **IBM Cert Manager** tile to appear.

Note: The current version of the operator may differ than shown in the image below. Select the most current version.

This screenshot shows the search results for 'IBM Cert Manager'. The search bar at the top contains the query 'IBM Cert Manager'. A green box highlights this search term. Below the search bar, the results are displayed in a grid. One result, 'ibm-cert-manager-4.2.7', is highlighted with a green box. This result is described as an 'IBM Cert Manager' operator provided by IBM, which is an 'Operator for managing deployment of cert-manager service'. The search results also show other categories like 'All Items' and 'Cloud Provider'.

7. Click Install.

The screenshot shows the Red Hat OpenShift OperatorHub interface. On the left, there's a sidebar with navigation links like Home, Operators, Workloads, Networking, Storage, Builds, Observe, and Compute. Under Operators, 'OperatorHub' is selected. In the main content area, a search bar at the top right says 'All Items' and has 'IBM Cert Manager' typed into it. Below the search bar, a card for 'ibm-cert-manager-4.2.7' is displayed, which is the 'IBM Cert Manager' operator provided by IBM. The card includes a brief description: 'Operator for managing deployment of cert-manager service.', a 'Channel' dropdown set to 'v4.2', a 'Version' dropdown set to '4.2.7', a 'Capability level' section with 'Basic Install' and 'Seamless Upgrades' selected, and a 'Source' section showing 'ibm-cert-manager-4.2.7'. At the bottom right of the card, there's a large green 'Install' button, which is highlighted with a yellow box.

8. Keep the default settings and click Install.

The screenshot shows the 'Install Operator' page for the 'ibm-cert-manager' operator. The left sidebar is identical to the previous screenshot. The main area has a header 'You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.' Below this, the title 'Install Operator' and a sub-instruction 'Install your Operator by subscribing to one of the update channels to keep the Operator up to date. The strategy determines either manual or automatic updates.' The configuration fields include:

- Update channel ***: A dropdown set to 'v4.2'.
- Version ***: A dropdown set to '4.2.7'.
- Installation mode ***: A radio button group where 'All namespaces on the cluster (default)' is selected. A note below says 'Operator will be available in all Namespaces.'
- Installed Namespace ***: A radio button group where 'Operator recommended Namespace: ibm-cert-manager' is selected. A note below says 'Namespace ibm-cert-manager does not exist and will be created.'
- Update approval ***: A radio button group where 'Automatic' is selected.

On the right side, there are four sections under 'Provided APIs':

- CR CertificateRequest**: Not available.
- CMC Cert Manager Config**: Describes CertManagerConfig as the Schema for the certmanagerconfigs API. It includes documentation and a license link: <https://ibm.biz/cpf39install.License>.
- Challenge**: Not available.
- ClusterIssuer**: Not available.
- Issuer**: An issuer represents a certificate issuing authority which can be referenced as...

At the bottom left, there are two buttons: a green 'Install' button highlighted with a yellow box, and a blue 'Cancel' button.

**Do not continue until...**

The installation process takes a few minutes. Do not continue until you see the following message: **Installed operator: ready for use.**

Install the watsonx Assistant for Z Operator (for OpenSearch)

1. In your command prompt or terminal window, create a new namespace called `wxa4z-byos` in the Red Hat OpenShift cluster.

```
oc create namespace wxa4z-byos
```

2. Create or obtain your IBM Container Software production entitlement key.

A production entitlement key is required to pull the container images that get deployed by the operator.

To create or retrieve your existing entitlement key, follow the instructions [here](#).

If extra assistance is needed, refer to this [site](#).

Locate your existing key or create a new one and continue to the next step.

3. Click **copy** and record your entitlement key for future use in a secure location.

The screenshot shows the IBM Container Software and Cloud Pak Access Management interface. On the left, there's a sidebar with 'My IBM', 'Profile', 'Billing', 'Container Software and Cloud Pak Access Management', and 'Entitlement keys' (which is selected). Below that is 'Container software library'. The main area has a title 'Entitlement keys (1)'. It says 'Access your container software' and explains that an entitlement key allows access to all container software in the IBM Entitled Registry. It shows one active entitlement key issued on October 17, 2022. The key itself is a long string of characters. To the right of the key are 'Copy' and 'Delete' buttons, with 'Copy' highlighted by a green border.

4. In your command prompt or terminal window, set an environment variable with your production entitlement key.

Substitute your production entitlement key copied in the last step for <entitlement key> .

Mac OS:

```
export IBM_CS_ENT_KEY=<entitlement key>
```

Microsoft Windows:

```
set IBM_CS_ENT_KEY=<entitlement key>
```

5. Enter the following command to create a pull secret for the **Container Registry**.

Mac OS:

```
oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --  
docker-username=cp --docker-password=$IBM_CS_ENT_KEY
```

Microsoft Windows:

```
oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --  
docker-username=cp --docker-password=%IBM_CS_ENT_KEY%
```

The terminal window shows the user running commands to create a namespace and a pull secret. The pull secret command is highlighted with a green border. The output shows the secret was created successfully.

```
andrewjones@Andrews-MBP watsonxAssistant % oc create namespace wxa4z-byos  
namespace/wxa4z-byos created  
andrewjones@Andrews-MBP watsonxAssistant % export IBM_CS_ENT_KEY=  
andrewjones@Andrews-MBP watsonxAssistant % oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --  
docker-username=cp --docker-password=$IBM_CS_ENT_KEY  
secret/icr-pull-secret created  
andrewjones@Andrews-MBP watsonxAssistant %
```

6. In a text editor, create a file that is named `catalogSource.yaml` and paste the following text in the file.

**Formatting of the yaml file is critical!**

The content of YAML files must be formatted exactly as shown. Use the copy icon to prevent typographical errors.

File name:

```
catalogSource.yaml
```

File contents:

```
apiVersion: operators.coreos.com/v1alpha1
kind: CatalogSource
metadata:
  name: ibm-wxa4z-operator-catalog
  namespace: wxa4z-byos
spec:
  displayName: "IBM watsonx Assistant for Z Operator Catalog"
  image: icr.io/cpopen/ibm-wxa4z-
  catalog:v2.1.0@sha256:a085d360b6aa0e40cf86a632eb5cd190a0407d1c54ec1b2d1d2fb5507f39a524
  publisher: 'IBM'
  sourceType: grpc
  secrets:
  - icr-pull-secret
```

7. Create your document catalog in the Red Hat OpenShift operator.

```
oc apply -f catalogSource.yaml
```

```
andrewjones@Andrews-MBP watsonxAssistant % oc create namespace wxa4z-byos
namespace/wxa4z-byos created
andrewjones@Andrews-MBP watsonxAssistant % export IBM_CS_ENT_KEY=eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJpc3MiOiJJQk0gTWFya2V0cGxhY2UiLCJpYXQiOjE2NjYwMTk1ODAsImp0aSI6IjNkOWUyMzjZTAzMDQzMzVhNTJhYTkzMWNmOTcyMDR1In0.4M3XRDXzkHMSOkFNJ4uKVcWZ6SnEA0Z03eL_11A2xY
andrewjones@Andrews-MBP watsonxAssistant % oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --docker-username=cp --docker-password=$IBM_CS_ENT_KEY
secret/icr-pull-secret created
andrewjones@Andrews-MBP watsonxAssistant % vi catalogSource.yaml
andrewjones@Andrews-MBP watsonxAssistant % vi catalogSource.yaml
andrewjones@Andrews-MBP watsonxAssistant % oc apply -f catalogSource.yaml
catalogsource.operator.coreos.com/ibm-wxa4z-operator-catalog created
andrewjones@Andrews-MBP watsonxAssistant %
```

8. In the Red Hat OpenShift web console, click **OperatorHub** and select the **wxa4z-byos** project.

The screenshot shows the Red Hat OpenShift OperatorHub interface. The left sidebar has 'OperatorHub' selected. The search bar at the top contains 'wxa4z-byos'. Below the search bar, there is a list of operators categorized by provider: Community, Marketplace, and Red Hat. The 'Community' section includes '[DEPRECATED] CrowdStrike Operator' and '[DEPRECATED] Abot Operator-v3.0.0'. The 'Marketplace' section includes '[DEPRECATED] Hazelcast Platform Operator'. The 'Red Hat' section includes 'Advanced Cluster Management for Kubernetes'. A note at the bottom right says '624 items'.

9. Enter **ibm watsonx** in the search field and the click the **IBM watsonx Assistant for Z Operator Catalog** tile.

Be patient.

It may take a minute or two for the **IBM watsonx Assistant for Z Operator Catalog** tile to appear. Reload the browser page if the operator is not listed.

Note: The current version of the operator may differ than that shown in the image below.

The screenshot shows the Red Hat OpenShift OperatorHub interface. The left sidebar has 'OperatorHub' selected. The search bar at the top contains 'ibm watsonx'. Below the search bar, there is a list of operators under the heading 'IBM watsonx Assistant for Z Operator Catalog'. The list includes 'IBM watsonx Assistant for Z provided by IBM' and 'IBM watsonx Assistant for Z Operator'. A note at the bottom right says '1 items'.

10. Click **Install**.

Note: The current version of the operator may differ than the one shown in the image after this. Select the most current version.

You are logged in as a temporary administrator.

Project: wxa4z-byos

OperatorHub

Discover Operators from the Kubernetes community and Red Hat partners, curated by Red Hat. You can purchase services to your developers. After installation, the Operator capabilities will appear in the Developer Catalog provided by IBM.

11. Select A specific namespace on the cluster (a) under Installation mode and wxa4z-byos (b) for the Installed Namespace, then click Install (c).

You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.

OperatorHub > Operator Installation

Install Operator

Install your Operator by subscribing to one of the update channels to keep the Operator up to date. The strategy determines either manual or automatic updates.

Update channel*: stable

Version*: 2.1.0

Installation mode*:

- All namespaces on the cluster (default)
Operator will be available in all Namespaces
- A specific namespace on the cluster
Operator will be available in a single Namespace only. (Selected)

Installed Namespace*: wxa4z-byos

Update approval*:

- Automatic (Selected)
- Manual

Install **Cancel**

**Do not continue until...**

The installation process takes a few minutes. Do not continue until you see the following message: **Installed operator: ready for use.**

The screenshot shows the Red Hat OpenShift web console interface. On the left, there's a sidebar with various navigation options like Home, Operators, Workloads, Networking, Storage, Builds, Observe, Compute, User Management, and Administration. The 'Operators' section is expanded, and 'OperatorHub' is selected. In the main content area, there's a message: 'You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.' Below this, a card displays the status of an operator: 'IBM watsonx Assistant for Z' (version v2.0.1) is listed as 'ibm-wxa4z-operator:v2.0.1 provided by IBM'. A green checkmark icon is next to the card. The text 'Installed operator: ready for use' is displayed below the card, followed by two buttons: 'View Operator' and 'View installed Operators in Namespace wxa4z-byos'. A green dashed box surrounds the 'Installed operator: ready for use' message and the operator card.

12. In your command prompt or terminal window, run the following commands to add the Container Registry credential to the operator's service account.

Mac OS and Microsoft Windows:

```
oc project wxa4z-byos
```

Mac OS:

```
oc patch serviceaccount ibm-wxa4z-operator-controller-manager --type merge -p
'{"imagePullSecrets": [{"name": "icr-pull-secret"}]}'
```

Microsoft Windows:

```
oc patch serviceaccount ibm-wxa4z-operator-controller-manager --type merge -p
'{"imagePullSecrets": [{"name": "icr-pull-secret"}]}'
```

```
andrewjones@Andrews-MBP watsonxAssistant % oc create namespace wxa4z-byos
namespace/wxa4z-byos created
andrewjones@Andrews-MBP watsonxAssistant % export IBM_CS_ENT_KEY=eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJpc3MiOiJJQk0gTWFya2V0cGxhY2UiLCJpYXQiOjE2NjYwMTk1ODAsImp0aS16IjNkOWUyNzZjZTAzMDQzMzNhNTJhYTkzMWNmOTcyMDR1In0.4M3XRD4XzkHMSOkFNJ4uKVcWZ6SnEA0Z03el_11A2xY
andrewjones@Andrews-MBP watsonxAssistant % oc -n wxa4z-byos create secret docker-registry icr-pull-secret --docker-server=cp.icr.io --docker-username=cp --docker-password=$IBM_CS_ENT_KEY
secret/icr-pull-secret created
andrewjones@Andrews-MBP watsonxAssistant % vi catalogSource.yaml
andrewjones@Andrews-MBP watsonxAssistant % vi catalogSource.yaml

andrewjones@Andrews-MBP watsonxAssistant %
```

13. In the Red Hat OpenShift web console, under **Workloads**, click **Pods**.

The screenshot shows the Red Hat OpenShift web console interface. On the left, a sidebar navigation includes 'Administrator', 'Home', 'Operators', 'OperatorHub', 'Workloads' (selected), 'Pods' (selected), 'Deployments', 'DeploymentConfigs', 'StatefulSets', and 'Secrets'. The main content area displays a message: 'You are logged in as a temporary administrative user. Update the cluster OAuth configuration to allow others to log in.' Below this, there is a section titled 'ibm-watsonx Assistant for Z' with a green checkmark icon. A callout box highlights the 'ibm-wxa4z-operator' entry under 'Installed Operators'.

14. Verify the two pods that start with **ibm-wxa4z-operator** have a status of **Running** and that all pods are **Ready**.

The screenshot shows the Red Hat OpenShift web console with the 'wxa4z-byos' project selected. The sidebar shows 'Administrator', 'Home', 'Operators', 'OperatorHub', 'Workloads' (selected), 'Pods' (selected), 'Deployments', 'DeploymentConfigs', 'StatefulSets', and 'Secrets'. The main area shows a table of pods:

Name	Status	Ready	Restarts	Owner	Memory	CPU	Created
1d126367b1ca53dcf2b0c93acd7	Completed	0/1	0	1d126367b1ca53dcf2b0c93acd733	-	-	Nov 4, 2024, 4:44 PM

```

Deploy required secrets and the custom bring-your-own-search (BYOSearch) resources

- In a text editor, create a file that is named `os-secret.yaml`, paste the following text in the file, and then modify the default password.

File name:

```
os-secret.yaml
```

Substitute a secure password of your choosing for the string <OPENSEARCH_PASSWORD>. Record this value for later use.

File contents:

```
apiVersion: v1
stringData:
  password: <OPENSEARCH_PASSWORD>
kind: Secret
metadata:
  name: opensearch-creds
  namespace: wxa4z-byos
type: Opaque
```

2. Create the secret by running the following command.

```
oc apply -f os-secret.yaml
```

3. In a text editor, create a file that is named `client-ingestion-secret.yaml`, paste the following text in the file, and then modify the default password.

File name:

```
client-ingestion-secret.yaml
```

Substitute a secure authentication key of your choosing for the string <CLIENT_INGESTION_AUTHKEY>. The authentication key can be a random password. Record this value for later use.

File contents:

```
apiVersion: v1
stringData:
  authkey: <CLIENT_INGESTION_AUTHKEY>
kind: Secret
metadata:
  name: client-ingestion-authkey
  namespace: wxa4z-byos
type: Opaque
```

4. Create the secret by running the following command.

```
oc apply -f client-ingestion-secret.yaml
```

5. In a text editor, create a file that is named `wrapper-creds.yaml`, paste the following text in the file, and then modify the default password.

File name:

```
wrapper-creds.yaml
```

Substitute a secure password credential of your choosing for the string <WRAPPER_PASSWORD> . The password can be a random password. Record this value for later use. Use this password in the following steps when you configure your BYOS connection in your assistant to connect to the network route.

File contents:

```
apiVersion: v1
stringData:
  username: admin
  password: <WRAPPER_PASSWORD>
kind: Secret
metadata:
  name: wrapper-creds
  namespace: wxa4z-byos
type: Opaque
```

6. Create the secret by running the following command.

```
oc apply -f wrapper-creds.yaml
```

7. Obtain and record your cluster domain that is used for routes by running the following command.

```
oc -n openshift-ingress-operator get ingresscontroller default -o jsonpath="{.status.domain}"
```

The output from the command does not include a newline.

The value returned for the cluster domain does not include a newline. When copying the value do not include the character or characters used for your command line prompt. Do not include the your prompt in the next step!

Note: The output of the command will be a string similar to:

apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com

8. In a text editor, create a file that is named `byos.yaml` and paste the following text in the file.

File name:

```
byos.yaml
```

Substitute the domain name recorded in the previous step for the string <YOUR_CLUSTER_DOMAIN> .

File contents:

```

apiVersion: wxa4z.watsonx.ibm.com/v1
kind: BYOSearch
metadata:
  name: byosearch
  namespace: wxa4z-byos
spec:
  imagePullSecrets:
    - name : icr-pull-secret
  namespace: wxa4z-byos
  clusterName: wxa4z-byos-cluster
  clusterDomain: <YOUR_CLUSTER_DOMAIN>

  opensearch:
    secretName: opensearch-creds

  persistence:
    enabled: true
    storageClass: "managed-nfs-storage"
    accessModes:
      - ReadWriteOnce
    size: 24Gi

  wrapper:
    createRoute: true
    resources:
      requests:
        cpu: 2
        memory: "500Mi"
      limits:
        cpu: 2
        memory: "1Gi"

  clientIngestion:
    secretName: client-ingestion-authkey

    resources:
      limits:
        cpu: "500m"
        memory: 2Gi
        nvidia.com/gpu: "0"
      requests:
        cpu: "500m"
        memory: 1Gi
        nvidia.com/gpu: "0"
    pvc:
      storageClass: "managed-nfs-storage"
      enabled: true
      size: 24Gi

```

9. Run the following command to deploy BYOS on your cluster.

```
oc apply -f byos.yaml
```

Verify all the required pods are running and get the network route to your BYOS instance

1. In the OCP console, verify that all pods have the status of **Running** or **Completed**.

⚠️ Do not continue until...

The BYOS deployment can take 20 minutes or more to complete. Do not continue until all the pods have a status of "Running" or "Completed". The next step is to retrieve your BYOS endpoint URL.

Name	Status	Ready	Restarts	Owner	Memory	CPU	Created
da80909aab1563ff0c15b7c6d	Completed	0/1	0	ds80909aab1563ff0c15b7c6da81 a8bbefabaa605065bb6c6b490e87 0e87f0a96f	-	-	Nov 6, 2024, 9:26 AM

wxa4z-snapshot-setup-job-nsqtz	Completed	0/1	0	U wxa4z-snapshot-setup-job	-	-	Nov 6, 2024, 10:22 AM

3. Copy and record the location for the **wxa4z-opensearch-wrapper** route.

Name	Status	Location	Service
wxa4z-client-ingestion	Accepted	https://wxa4z-client-ingestion-wxa4z-byos.apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com	wxa4z-client-ingestion
wxa4z-opensearch-wrapper	Accepted	https://wxa4z-opensearch-wrapper-wxa4z-byos.apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com	wxa4z-opensearch-wrapper

Update your assistant with the new BYOS instance route

You are now ready to configure your assistant with the route to your BYOS instance.

1. Using the network route for your BYOS instance, append the string **/v1/query** to complete the URL endpoint.

The URL should look similar to:

```
https://wxa4z-opensearch-wrapper-wxa4z-
byos.apps.672b79320c7a71b728e523b4.ocp.techzone.ibm.com/v1/query
```

Important: The above URL will not work for you. Use the value of your specific OpenSearch instance that is recorded in the previous step.

2. Update your assistant's custom search integration URL.

Next, you need to return to your assistant in the watsonx Orchestrate AI assistant builder and update the custom search integration URL. Use the URL from the network route (with **/v1/query**) appended. Use **admin** for the **Username** and the **Password** will be the password that you specified in the `wrapper-creds.yaml` file.

Don't recall how to set the customer search URL?

Refer back to [Creating an assistant and configuring conversational search](#) if you don't remember how to specify the customer search URL.

3. Test your assistant and verify that it is still answering questions that are related to IBM Z.

Experiment with different prompts and validate that the answers provided are reasonable, and that you can view the documentation that was sourced. If responses are not received as expected, verify that the URL is formatted correctly and you specified the `wrapper-creds.yaml` password as the **admin** password.

Troubleshooting

The following are issues that you may encounter. If the provided resolutions do not work, contact support by using the methods that are mentioned in the [Support](#) section.

Pods have a status of ErrImagePull or ImagePullBackoff

If the pods starting with **ibm-wxa4z-operator** have a status of “ErrImagePull” or “ImagePullBackoff”, you can delete the pod and it will automatically restart and pull the image successfully. Wait until the pod is re-created successfully.

The wxa4z-client-ingestion pod does not start

Did you include the % character in the **clusterDomain** name when creating the **byos.yaml**? To resolve, edit the **byos.yaml** file and run the following command again. The current pod will be terminated and a new one started. This will take about 20 minutes to start.

```
oc apply -f byos.yaml
```

Installing and using zassist to ingest client documents

With bring-your-own-search (BYOS) installed and configured in your assistant, you can now prepare for document ingestion (bring-your-own-documents (BYOD)). BYOD demonstrates how clients can augment their assistant's conversational search by creating an internal knowledge base with their documentation. Using the client's documentation allows the assistant to provide valuable responses to a range of questions not possible with the default documentation available.

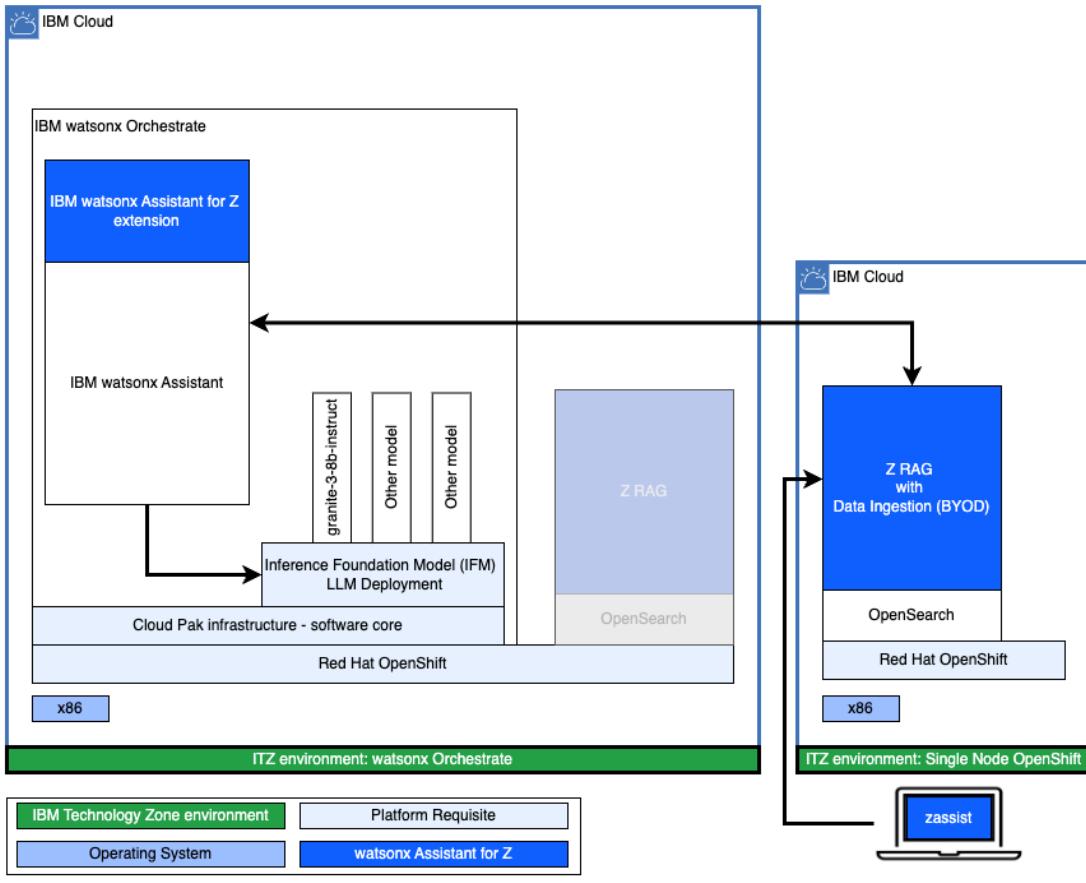

As an example, a client mentioned that their developers often need reference material on company-specific legacy code or company-specific syntax. The users must search through volumes of documentation to find it or look at old code. Also, a need for their operational support group to quickly determine how to resolve technical issues using runbooks exists.

You can show your client how watsonx Assistant for Z can assist developers and operational support personnel in finding answers about internal processes for code development and deployment.

Currently, only PDF, HTML, and DOCX file formats are supported for ingestion.

A high-level, logical architecture of the environment is illustrated in the following diagram.

Installing and using zassist to ingest client documents

To prepare for document ingestion, you can also reference the setup instructions that are located [here](#).

Install the zassist utility

The **zassist** utility is an executable program that automates the ingestion of client documentation into the RAG for watsonx Assistant for Z. A version of zassist is available for download for IBMers and Business Partners for conducting pilots. Follow the steps to download and install **zassist**.

i How do clients get the zassist utility?

The utility is available to clients through [IBM Passport Advantage](#).

1. Click the following link and download the **zassist.zip** file.

<https://ibm.box.com/s/j3nt5iw4fqd5w2jgcqwxnjlsu8bpvl77>

The screenshot shows a file named "zassist.zip" in a Box folder. The file was modified on Sep 5 at 9:15 AM and has a size of ... bytes.

2. Extract the **zassist.zip** file.
3. Locate the appropriate file for your local workstation's operating system.

The screenshot shows the contents of the "zassist" folder. It contains subfolders for "linux", "mac", "mac-arm", and "windows". Inside the "mac" folder, there is a file named "zassist" highlighted with a green box. The "zassist.zip" file is also visible at the bottom of the list.

Name	Date Modified	Size	Kind
byos.yaml	Today at 12:17 PM	956 bytes	YAML
ca.crt	Today at 11:36 AM	Zero bytes	certificate
catalogCertManager.yaml	Today at 9:15 AM	476 bytes	YAML
catalogSource.yaml	Today at 9:25 AM	397 bytes	YAML
client-ingestion-secret.yaml	Today at 10:05 AM	155 bytes	YAML
os-secret.yaml	Today at 10:04 AM	149 bytes	YAML
zassist	Sep 5, 2024 at 11:15 AM	--	Folder
linux	Sep 18, 2024 at 8:15 AM	--	Folder
mac	Sep 18, 2024 at 8:15 AM	--	Folder
zassist	Sep 18, 2024 at 8:17 AM	10.2 MB	Unix Executable File
mac-arm	Sep 18, 2024 at 8:15 AM	--	Folder
windows	Sep 18, 2024 at 8:15 AM	--	Folder
zassist.zip	Today at 1:47 PM	23 MB	ZIP archive

4. Either copy the appropriate **zassist** file to a directory in your PATH, or add the appropriate directory to your PATH environment variable.

Additional information for running the preceding tasks can be found [here](#).

Windows users may need to rename the file **zassist** file!

If the **zassist** file does not execute properly, rename the file to **zassist.exe**.

5. Run the **zassist** command to verify that it is working.

```
zassist
andrewjones@Andrews-MacBook-Pro watsonxAssistant % PATH=$PATH:./zassist
andrewjones@Andrews-MacBook-Pro watsonxAssistant % ./zassist
zassist: error: expected one of "version", "init", "login", "ingest", "load", ...
andrewjones@Andrews-MacBook-Pro watsonxAssistant %
```

Mac/OS users may need to adjust security settings.

The **zassist** binary may cause a security exception. Adjust the security settings by opening the **System Settings** utility and clicking **Privacy & Security**. Under **Security** locate the message about the **zassist** binary and click **Allow Anyway**. Return to the terminal window and try running the command again.

Ingest client documentation using zassist

With the **zassist** command installed, you are now able to begin ingesting data.

Step-by-step guidance for ingesting documents using **zassist** is provided in the IBM watsonx Assistant for Z documentation.

1. Download the `BYOD.zip` file.

[BYOD.zip](#)

What is in the sample client documentation?

Three sample documents are included:

- `Mainframe_COBOL_Error_Codes.pdf`

This is a document containing company-specific mainframe COBOL error codes for their application.

Developers within the organization typically review this document to quickly diagnose issues based on the application error codes returned.

- `Mainframe_Operational_Incidents_Log.pdf`

This document is leveraged by the organization's operational support team and contains historical records of production-level incidents that occurred. For each incident, there's a record of what the incident was, the date, how it was resolved and who was involved in resolving the incident.

- `COBOL-CICS-to-Java-Internal-Framework.pdf`

This document is leveraged by the development team and contains details about the organization's internal framework for developing applications consisting of legacy COBOL CICS interoperating with new Java code. Within the document contains company-specific coding practices and code syntax that the developers frequently reference.

2. Extract the `BYOD.zip` file.
3. Change to the `BYOD` directory.
4. Set the `TLS_VERIFY` environment variable to `false`.

Mac OS:

```
export TLS_VERIFY=false
```

Windows OS:

```
set TLS_VERIFY=false
```

5. Initialize the `zassist` environment.

```
zassist init
```

6. Retrieve the server URL for the client ingestion server.

Mac OS:

```
echo https://$(oc -n wxa4z-byos get route wxa4z-client-ingestion -o jsonpath=".spec.host")
```

The output of this command is your unique URL for your client ingestion server.

Windows OS (this method can also be used by Mac OS users):

You can retrieve the URL in your OCP Web console by navigating to Networking Routes and then copy the URL for the **wxa4z-client-ingestion** route.

Name	Status	Location	Service
wxa4z-client-ingestion	Accepted	https://wxa4z-client-ingestion-wxa4z-byos.apps.67850b0240c621133ba8749.ocp.techzone.ibm.com	wxa4z-client-ingestion
wxa4z-opensearch-wrapper	Accepted	https://wxa4z-opensearch-wrapper-wxa4z-byos.apps.67850b0240c621133ba8749.ocp.techzone.ibm.com	wxa4z-opensearch-wrapper

7. Retrieve the `client-ingestion-authkey`.

```
oc -n wxa4z-byos get secret client-ingestion-authkey -o jsonpath=".data.authkey" | base64 -d
```

The output of this command is your unique auth-key that you had previously set. You will need the output of both previous commands in the next step.

✖ If the command doesn't work for you...

You can find your `authkey` value by viewing the `client-ingestion-secret.yaml` file you created and copying the value set for the `authkey` parameter.

8. Login to your server. Replace `<server url>` with the value from step 6.

```
zassist login <server url>
```

9. When prompted, enter the password from step 7. Verify that a **Success** message is received.

10. Verify zassist is ready to ingest documents by checking the status.

```
zassist status
```

```
andrewjones@Andrews-MBP BYOD % export TLS_VERIFY=false
andrewjones@Andrews-MBP BYOD % zassist init
andrewjones@Andrews-MBP BYOD % echo https://$(oc -n wxa4z-byos get route wxa4z-client-ingestion -o jsonpath=".spec.host")
https://wxa4z-client-ingestion-wxa4z-byos.apps.67850b0240c6211133ba8749.ocp.techzone.ibm.com
andrewjones@Andrews-MBP BYOD % oc -n wxa4z-byos get secret client-ingestion-authkey -o jsonpath=".data.authkey" | base64 -d
[REDACTED]
andrewjones@Andrews-MBP BYOD % zassist login https://wxa4z-client-ingestion-wxa4z-byos.apps.67850b0240c6211133ba8749.ocp.techzone.ibm.com
Enter Password: *
Success.
Gathering local files...
Local    Ingested    Loaded    Path
yes      no         no        dev/COBOL-CICS-to-Java-Internal-Framework.pdf

```

Verify that the assistant is using the ingested documents

Use the Watsonx Orchestrate AI assistant builder to verify your document ingestion.

1. Enter the following prompt in your assistant and **record the response** (cut and paste into a text file on your local machine).

The customer application is failing with ERR-CBL-001, what does this internal error mean?

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', and 'Zeeves'. Below the navigation is a toolbar with 'Copy link to share', 'Change layout', 'Change background', and 'Customize web chat'. On the left, there's a sidebar with various icons. The main area is titled 'Preview assistant' and shows 'Zeeves'. A blue circular icon of an owl is displayed. Below it, the text 'Hi! I'm Zeeves. How can I help you today?' is shown. At the bottom, a text input field contains the prompt: 'The customer application is failing with ERR-CBL-001, what does this internal error mean?'. To the right of the input field is a blue send button with a white arrow.

2. Click the **Down arrow** to view the citations for the response.

The customer application is failing with error ERR-CBL-001, which means that a null value was encountered in a mandatory field. This error typically occurs when a required field in the application is left blank or contains a null value. It is important to investigate and resolve this issue as soon as possible to ensure the proper functioning of the application.

3. Click View source for the Mainframe_COBOL_Error_Codes-... citation.

CDBL0001E
The z/TPF debugger works as a client in debug sessions, where TPF Toolkit is listening for the requests from the z/TPF debugger. pgmname The name of the program that the error originated...

Mainframe_COBOL_Error_Codes....
ERR-CBL-001: Null value encountered in mandatory field.

Take note of the order of the response citations!

4. Accept the security risk to view the source document for any ingested document cited.

The steps to accept the security risk for the document are not shown as it varies by the browser you are using. The risk occurs because the certificate for the connection to the SNO instance is not secure. Notice that the URL contains the path to your SNO instance route.

Company-Specific Mainframe COBOL Error Codes

List of Error Codes

- ERR-CBL-001: Null value encountered in mandatory field.
- ERR-CBL-002: Overflow in numeric computation.
- ERR-CBL-003: File not found in JCL input directory.
- ERR-CBL-004: Duplicate record detected during WRITE operation.
- ERR-CBL-005: Index out of bounds in table processing.
- ERR-CBL-006: Invalid REDEFINE clause detected in structure.
- ERR-CBL-007: S0CA abend due to invalid memory reference.
- ERR-CBL-008: Division by zero encountered in arithmetic operation.
- ERR-CBL-009: INSUFFICIENT MEMORY: Unable to allocate storage for SORT operation.
- ERR-CBL-010: File status 35: File not opened correctly before access.
- ERR-CBL-011: Data mismatch error in READ INTO clause.
- ERR-CBL-012: Invalid key on SEARCH ALL for indexed file.
- ERR-CBL-013: S0C7 abend: Data exception encountered.
- ERR-CBL-014: Lock timeout in CICS transaction.
- ERR-CBL-015: File status 90: General file handling error.
- ERR-CBL-016: Job failed due to exceeded time allocation (MAXCC=12).
- ERR-CBL-017: Attempt to WRITE beyond maximum file size.
- ERR-CBL-018: Illegal MOVE operation detected on COMP-3 field.
- ERR-CBL-019: Misaligned DD statement in JCL.

5. Repeat the preceding steps for the following prompts in your assistant and **record the responses** (cut and paste into a text file on your local machine).

Are there any production incidents that were resolved in relation to Data corruption in the production database. If yes who can I collaborate with to resolve a similar issue today and what are their names?

What specific syntax changes do I need to make in COBOL to call Java using the internal framework? Please provide a detailed explanation.

What is the internal git lab link to execute the Java on z/OS pipeline?

Adjusting the search behavior

Do you recall the **Metadata** field when you configured your assistant?

The screenshot shows the 'Custom service' configuration page in the AI assistant builder. The 'Metadata' field is highlighted with a green dashed box. The field contains a JSON example:

```
{
    "example_field": "example_value",
    "other_example_field": 7
}
```

The Metadata field provides a way to adjust your assistant's behavior during conversational search for your OpenSearch instance. Now that you have your own docs that are ingested for conversational search, you can set the metadata field for your assistant to use those documents in its content-grounded search. If you leave the metadata field empty, then it defaults to settings found to perform well but may not use the ingested documents as part of the search results.

If you leave the Metadata field empty, OpenSearch relies on the default settings, which means OpenSearch searches all the default IBM-provided documentation and all of the ingested customer documentation using the following value:

```
{"ibm_indices": "*_ibm_docs_slate, *_ibm_redbooks_slate",
"customer_indices": "customer_*"}
```

Replacing the wildcard string with an explicit list of indices allows for personalization. The metadata setting is where you can input specific indices (pointing to the underlying documentation) that you want your assistant to use for the content-grounded search. There are over 220 products and topics that the OpenSearch instance has IBM Documentation for. You can find those indices and products [here](#).

You can input a subset of indices into the “Metadata” field in cases where you want your assistant to only gather context for specific IBM products or topics. The specific indices can be listed out in this format:

```
{"ibm_indices": "<comma separated index values>", "customer_indices": "customer_*"}
```

For example, if you want your assistant to reference only documentation for “Db2 Analytics Accelerator for z/OS” and no ingested client documentation, you can enter the following into the metadata field:

```
{"ibm_indices": "ss4lq8_ibm_docs_slate"}
```

If you have a mix of IBM Documentation and client documentation ingested, then there's an optional search string that you can use to set the "weights" used for each.

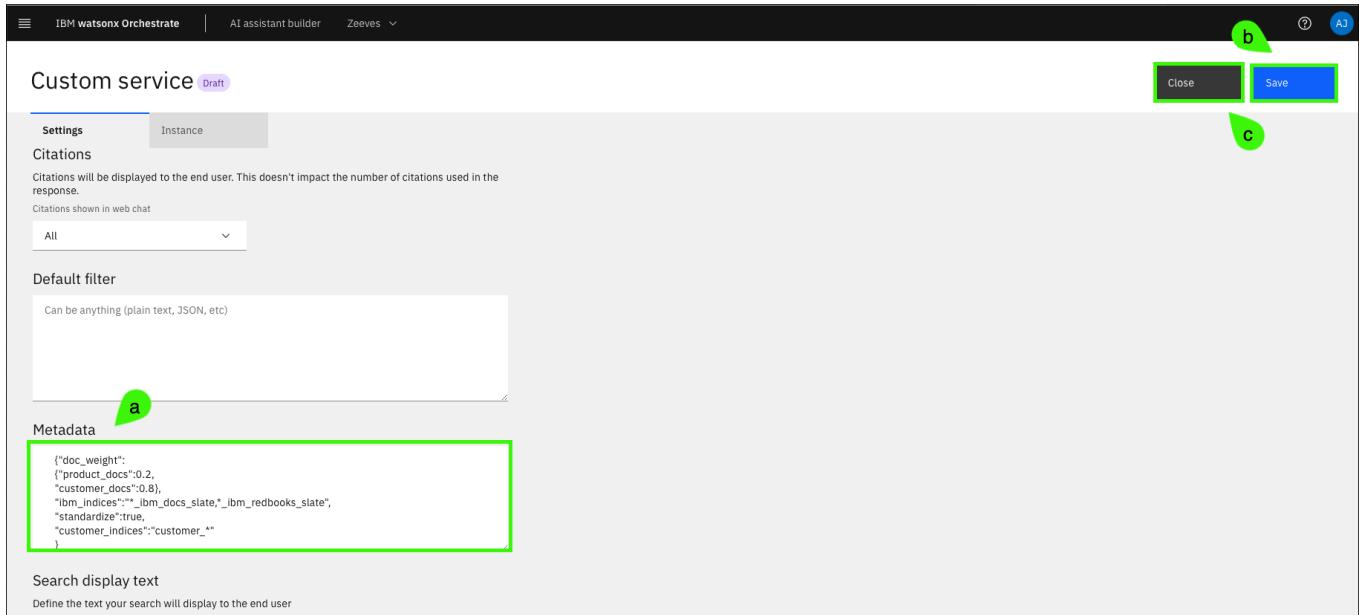

For example:

```
{"doc_weight":  
{"product_docs":0.5,  
"customer_docs":0.5},  
"ibm_indices": "*_ibm_docs_slate,*_ibm_redbooks_slate",  
"standardize":true,  
"customer_indices":"customer_*"  
}
```

In this case, "product_docs" is the weight that is assigned to "ibm_indices" and "customer_docs" is the weight that is assigned to "customer_indices". For more information on customizing the metadata field for conversational search, refer to this supplemental video found [here](#).

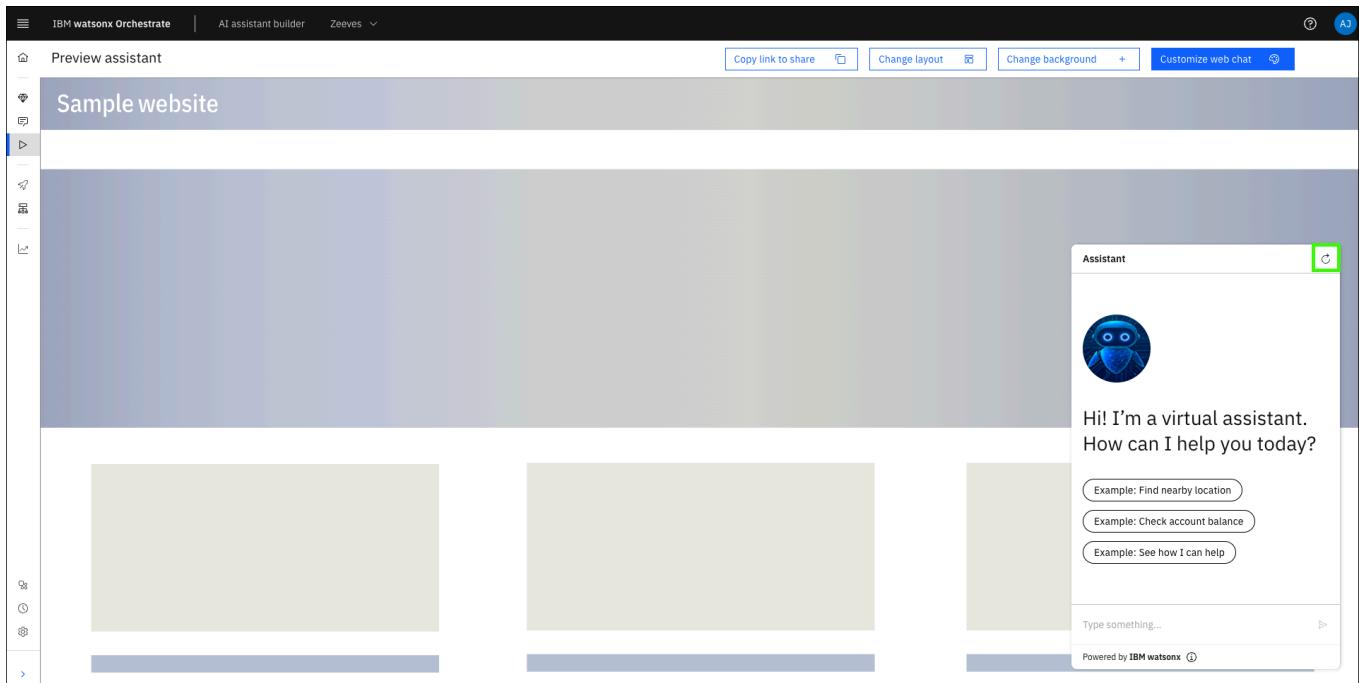

1. Set the (a) **Metadata** field for your BYOS custom search instance to the following value, click (b) **Save**, and then click (c) **Close**. Notice the weight for **customer_docs** is heavier than the weight for **product_docs**.

```
{"doc_weight":  
{"product_docs":0.2,  
"customer_docs":0.8},  
"ibm_indices": "*_ibm_docs_slate,*_ibm_redbooks_slate",  
"standardize":true,  
"customer_indices":"customer_*"
```

2. Hover over the **Home** (🏠) icon and click **Preview**.

3. Click the **Restart conversation** (⟳) icon.

4. Repeat the queries four queries run earlier and record the results and the order of the response citations.

Compare the two sets of results. Notice how the answers changed based on the weighting of the ingested documents versus the IBM product documentation. Were the ingested documents always the first document cited? If not, why do you think that is?

Before proceeding, experiment with different metadata and other configuration settings for your custom service instance.

For client pilots

If you or your client have other documents to ingest, you can do so by repeating the steps using **zassist**. The Velocity Pilot ITZ environment is limited in compute and storage capacity. The following limits should be adhered to:

- Loading documents can take a long time, especially with > 100 MB of text.
- It is recommended to run large loads late at night.
- When loading, ensure your workstations does not sleep during the process.
- If you receive a **batch time error**, set the batch size to a lower number for that command. For example:

```
zassist ingest . -s 50
```

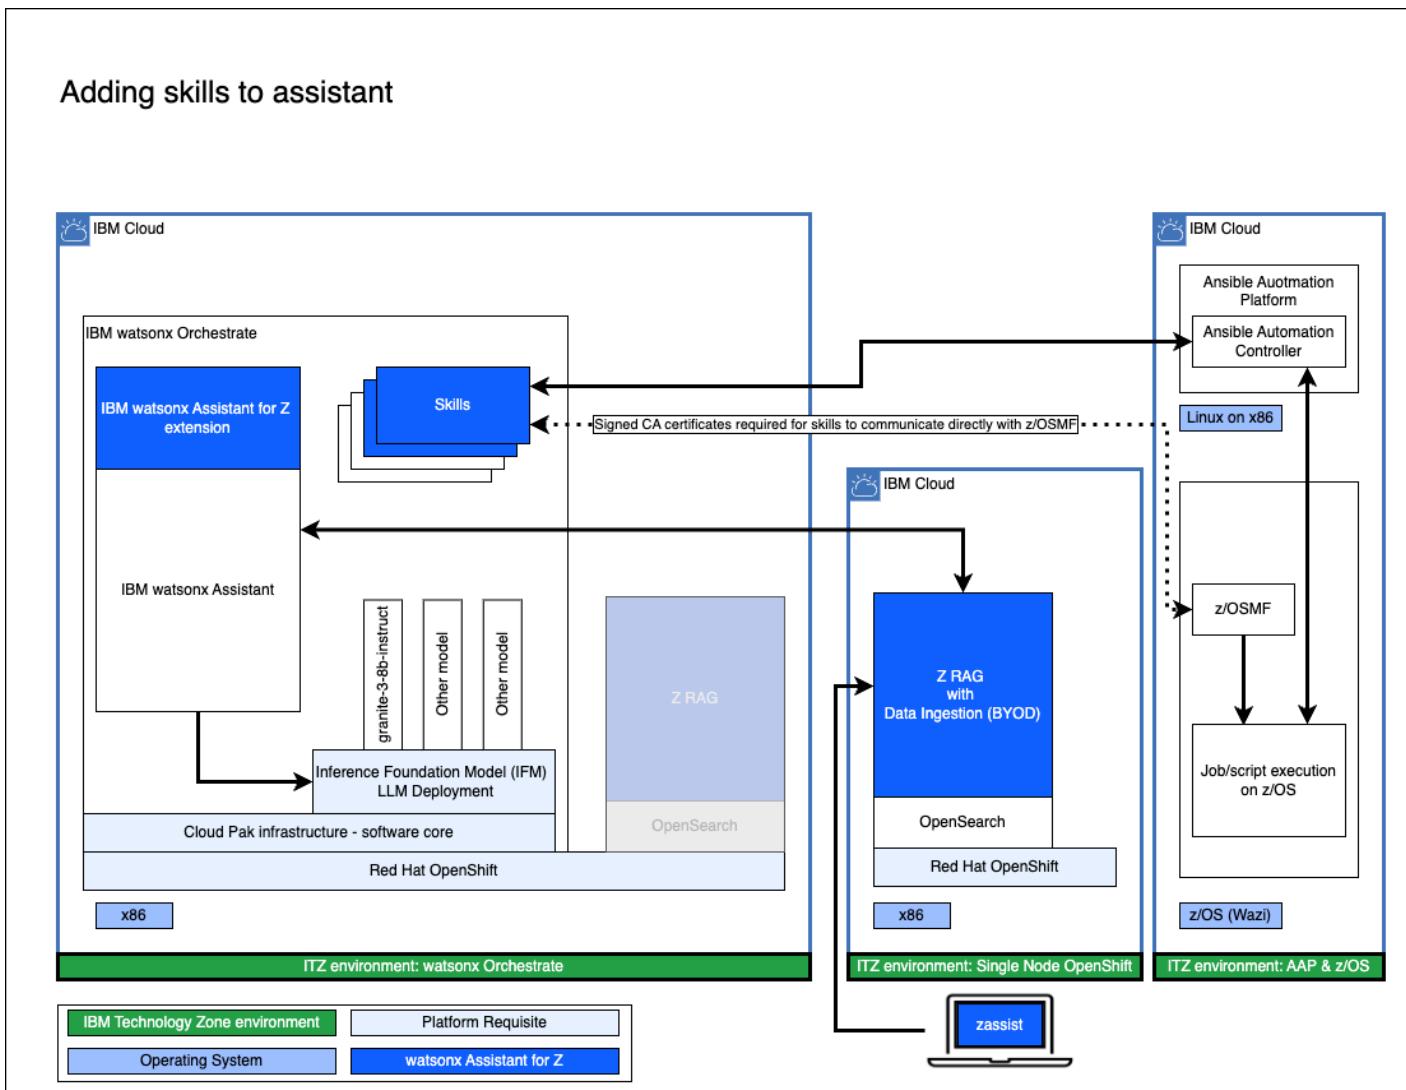

Skills and skill flows

Getting started with skills and actions

Watsonx Assistant for Z automates a range of IBM Z related tasks through assistant interactions by importing skills. Each skill is a pre-defined automation that accomplishes some unit or units of work by running tasks. For example, skills can view z/OS IPL information or work with z/OS datasets.

Watsonx Assistant for Z extends Watsonx Orchestrate, allowing users to build new skills from Ansible Automation platform or z/OS Management Facility (z/OSMF) through the Z Skills Accelerator extension. The Z Skills Accelerator extension connects Ansible and z/OS application programming interfaces (APIs) and imports automation as Ansible Playbooks, JCL, or REXX as skills. Learn more importing and building skills [here](#).

A high-level, logical architecture of the environment is illustrated in the figure that follows.

Environments

Watsonx Orchestrate

The Z Skills Accelerator extension is already configured in your watsonx Orchestrate IBM Technology Zone (ITZ) environment. You can use this component to import new skills.

Ansible Automation Platform and Wazi as a Service

To import skills for automations, you use Ansible Automation Platform (AAP) and Wazi as a Service (Wazi aaS) to serve as the z/OS back-end. Learn more about AAP [here](#). Learn more about Wazi, [here](#).

The two resources are provisioned together in the ITZ environment that you reserved earlier. This environment enables the ability to manage and automate z/OS tasks and subsystems with various preinstalled Ansible playbooks. It includes a z/OS back-end (Wazi as a Service) with all needed prerequisites.

The playbooks provided cover various use cases for automating z/OS management. Ansible's capabilities for automating various Z-specific tasks are not limited to the use cases that are preinstalled in the AAP instance. The preinstalled playbooks are tasks from the 'IBM z/OS core collection'. Using this environment accelerates the ability to showcase the value of watsonx assistant for Z, and to get started with simple automations that can be expanded.

The ITZ environment gives you access to AAP, which is preconfigured to target the accompanying z/OS Wazi system, along with web-based access to AAP to experiment with different playbook templates. These templates are imported into watsonx Orchestrate as skills and connected to your assistant.

For more information on the AAP and Wazi z/OS environments, refer to this [document](#).

The playbook templates that are preinstalled in AAP cover various use cases, which you can explore, including:

- z/OS Certificate Management (create, delete, list, and renew certificates)
- dataset management (create, delete, fetch datasets)
- Submit JCL
- Run Operator commands
- Run TSO commands
- And more

Each of the sections that follow build upon each other. Complete each to successfully enhance your assistant by starting with [Explore Ansible Automation Platform](#).

Explore Ansible Automation Platform

After you reserved the Ansible Automation Platform (AAP) and Wazi z/OS environment in IBM Technology Zone (ITZ) and the reservation is in the **Ready** state, follow these steps to explore AAP.

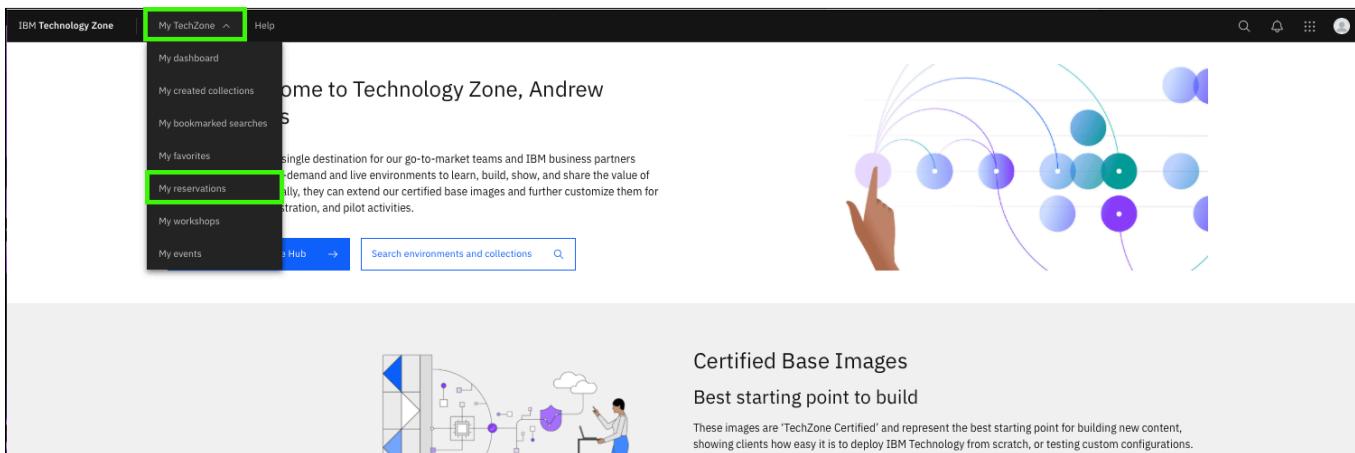

Access the AAP and Wazi as a Service environment

Be sure to record the information as instructed

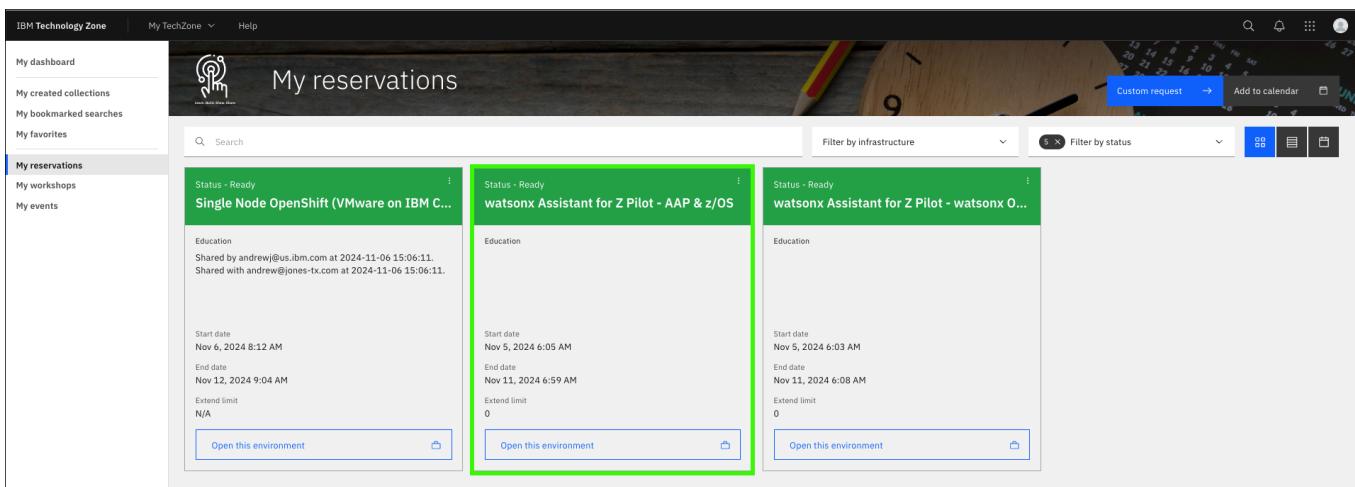

Several of the steps below instruct you to record values from your ITZ reservation. Be sure to do this as they will not only be used in this section, but also in later sections of the lab guide.

1. In the IBM Technology Zone portal, expand **My TechZone** and select **My Reservations**, or click the following link.

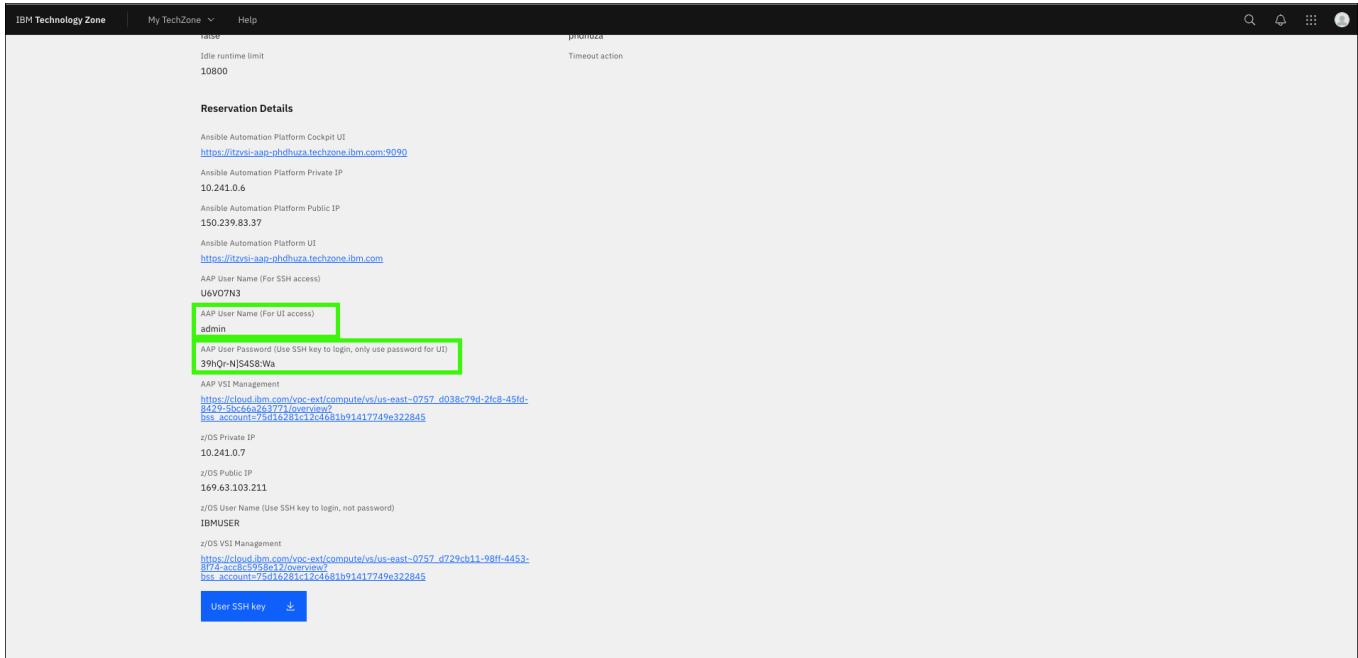

[ITZ My reservations](#)

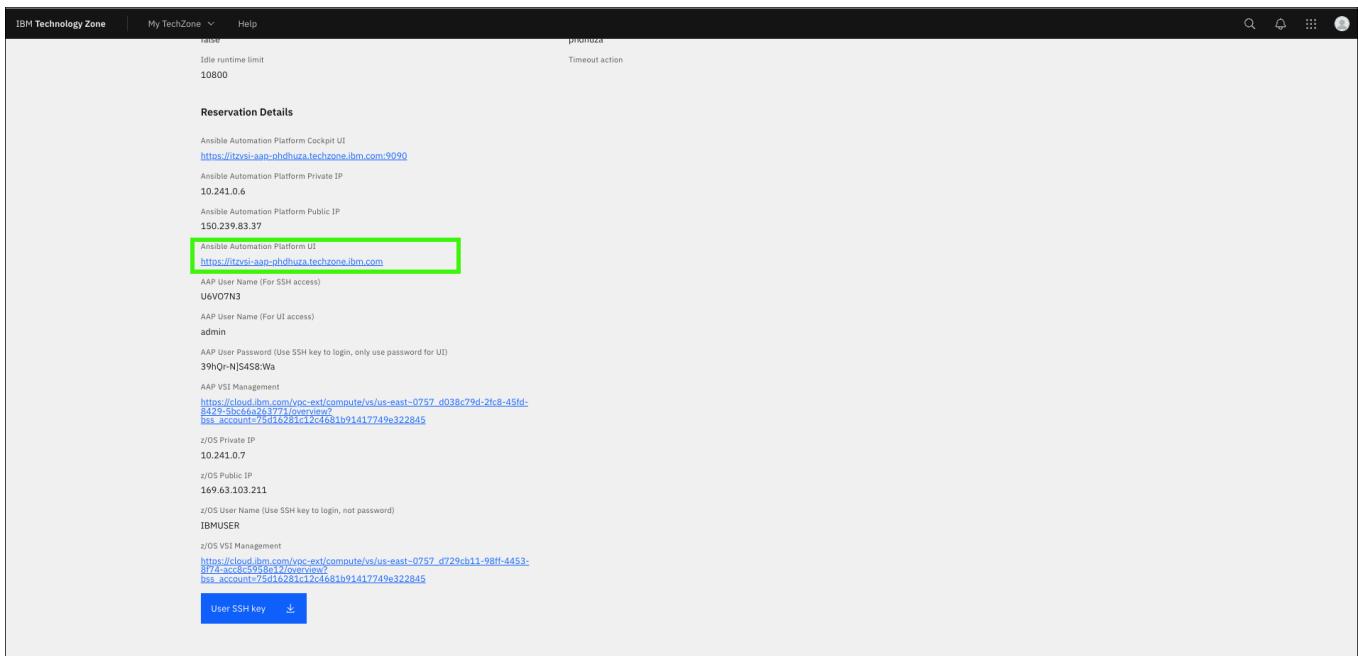

2. Click the **watsonx Assistant for Z Pilot - AAP & z/OS** tile.

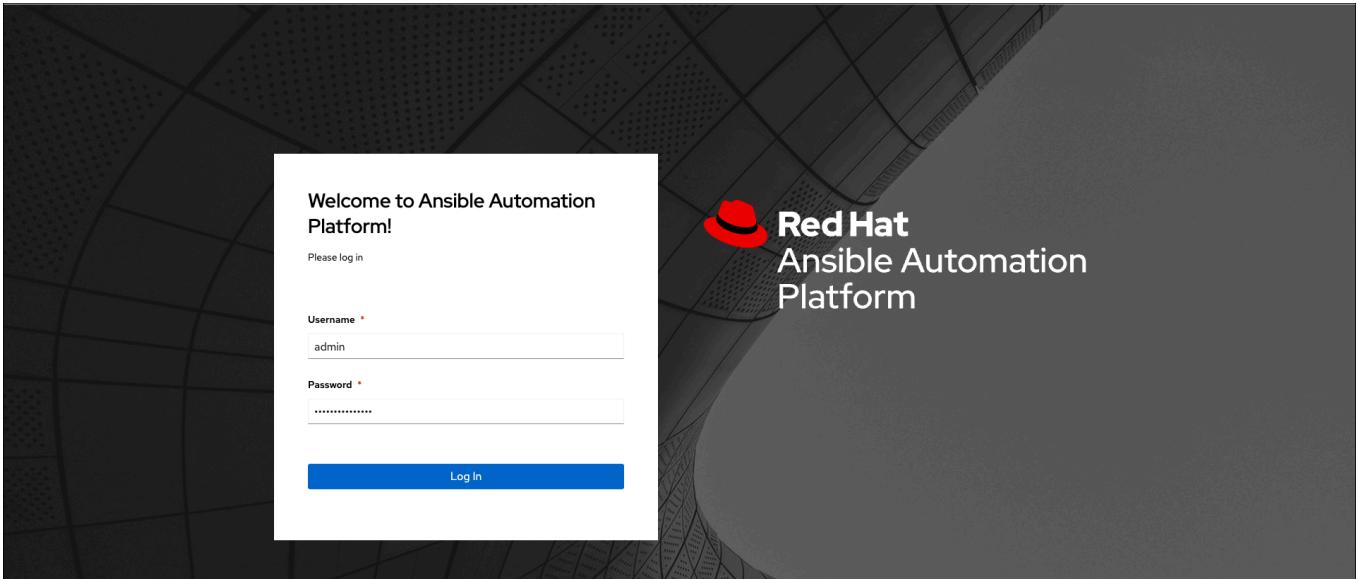

3. Locate and record the **AAP User Name (For UI access)** and **AAP User Password** fields.

4. Record and then click the Ansible Automation Platform UI link.

5. Enter the Username and Password that is recorded in step 3 and click Log In.

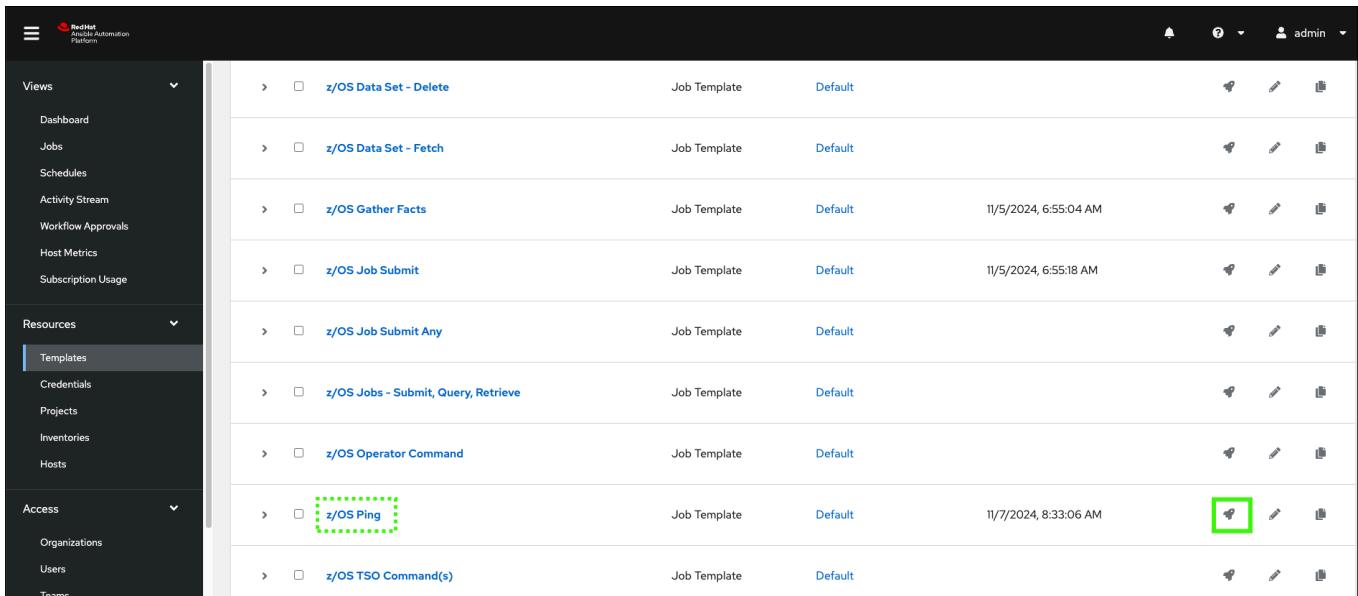

6. Click **Templates** under the **Resources** section.

The AAP instance is preconfigured to the Wazi aaS instance

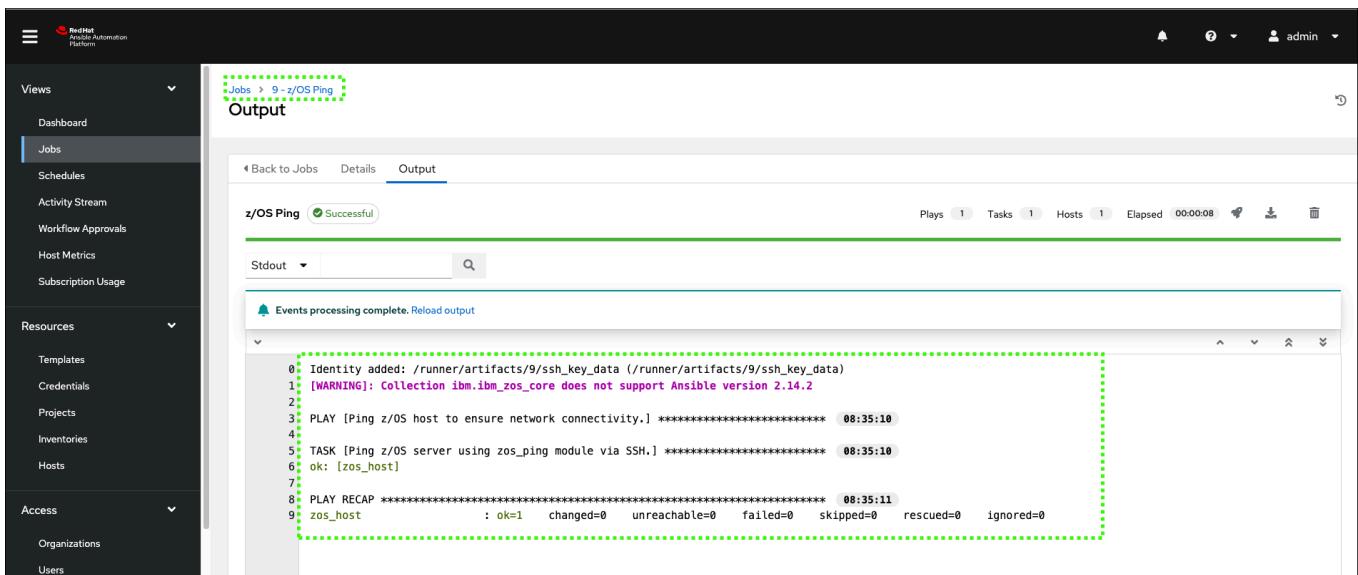

Note that because the AAP instance and the back-end z/OS system are preconfigured, no changes are needed to execute the templates and they will target your provisioned z/OS system by default.

7. Locate the **z/OS Ping** template and click the rocket (🚀) icon to start the template.

Views	z/OS Data Set - Delete	Job Template	Default			
Dashboard	z/OS Data Set - Fetch	Job Template	Default			
Schedules	z/OS Gather Facts	Job Template	Default	1/5/2024, 6:55:04 AM

```

Take time to explore the other templates that are ready to use. Learn more about the automation capabilities [here](#).

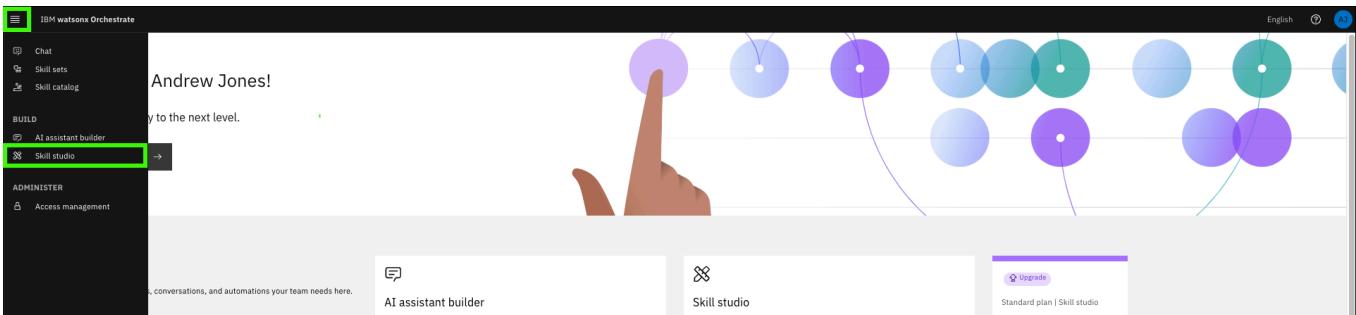

Importing skills from Ansible Automation Platform

Now that you understand Ansible Automation Platform (AAP) and the preinstalled automations available, you can import them as skills into your watsonx Orchestrate instance, which is used for assistant guided actions.

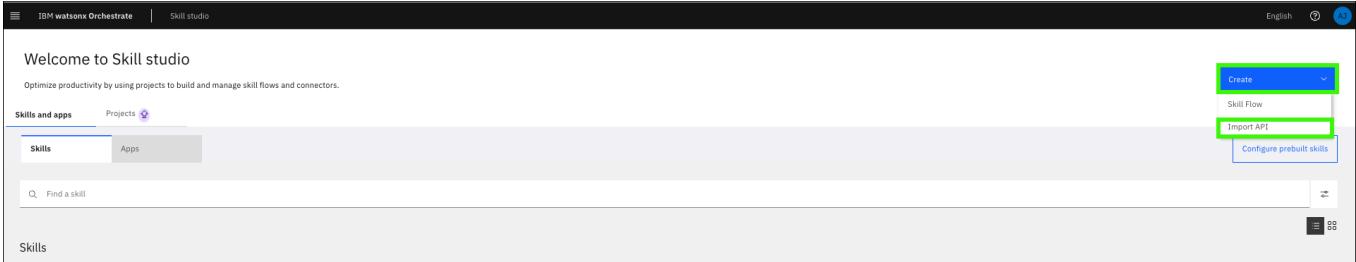

Import skills into your assistant

The next steps assume that you have an active browser window to the watsonx Orchestrate ITZ cloud account. If you do not, refer to the initial steps in [Creating an assistant and configuring conversational search](#).

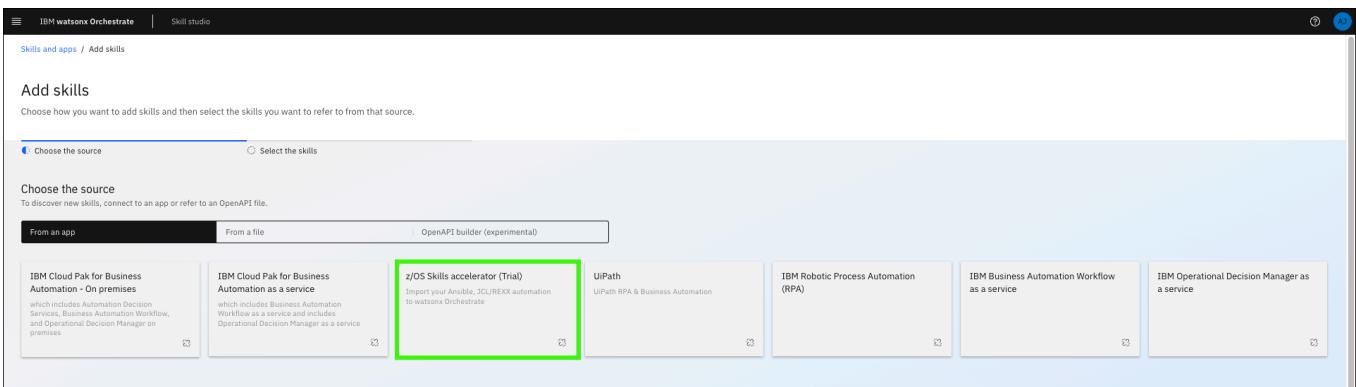

1. Return to your watsonx Orchestrate instance and expand the main menu and click **Skill studio**.

2. Expand **Create** and click **Import API**.

3. Click the **z/OS Skills accelerator (Trial)** tile.

4. Enter the following values in the **z/OS Skills accelerator** form and then click **Connect**.

Use the **URL**, **User Name**, and **Password** values recorded in the [Explore Ansible Automation Platform](#) section earlier.

a: Connection Type: ansible

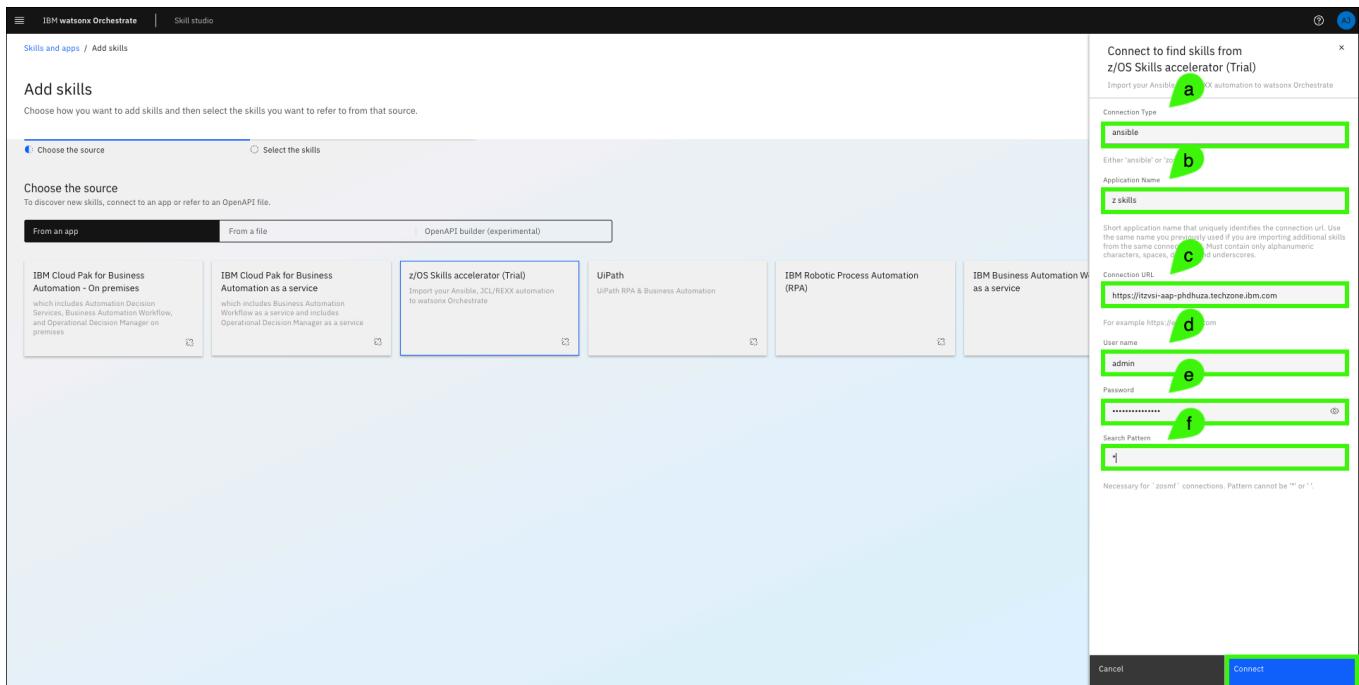

b: Application Name: <enter a meaningful name for the skills that you will import> - record this name, you will need in the next section

c: Connection URL: <enter the URL for your AAP UI>

d: User Name: <enter the AAP User Name (for UI access)>

e: Password: <enter the AAP User Password>

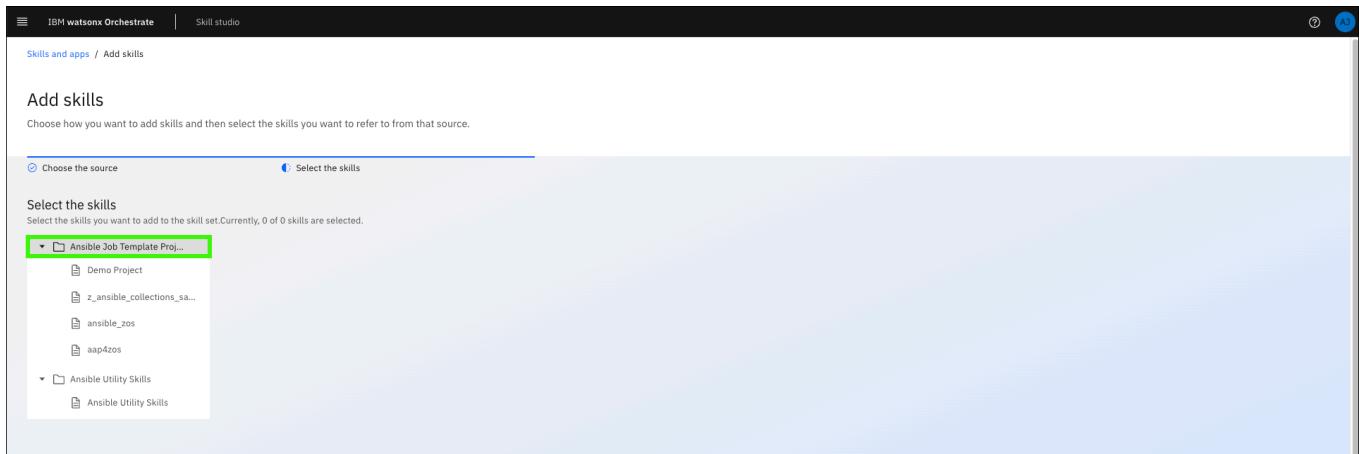

f: Search Pattern: *

5. Expand the Ansible Job Template Proj... folder.

Explore the other available skills

Take time to explore the available skills. There are many utility skills provided out of the box with the “Z Skills Accelerator” which are needed for actions such as retrieving the output of an Ansible skill. Consider importing these utility skills to enable more complete automation execution flows.

6. Click **aap4zos**.

Select the skills
Select the skills you want to add to the skill set. Currently, 0 of 19 skills are selected.

Skill	Description	Status
Z/os ping	Z skills - this playbook pings...	Ready to add
Z/os gather facts	Z skills - this sample playbook...	Ready to add

z/OS Gather Facts	Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
z/OS Ping	Just 1 step away to be ready	Ready to publish	Imported	andrew@jones-tx.com	November 19 2024

Configure prebuilt skills

The selected skills are now ready for use and available to your assistant. In the next section, learn how to connect them to your assistant.

Connecting skills to your assistant

Once you have a subset of skills that are published, the application you created can be connected to your assistant.

1. Expand the main menu and select **Skill sets**.

The screenshot shows the IBM Watsonx Orchestrate interface. The left sidebar has sections for Chat, Skill sets (which is highlighted with a green box), and Skill catalog. The main area is titled "Skill studio" and contains a "Create" button and a "Configure prebuilt skills" button. Below these are three published skill cards:

Step in the process	Status	Skill type	Author	Last edited

Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024
Ready to use	Published	Imported	andrew@jones-tx.com	November 19 2024

2. Click the **Team Skills** drop-down and select the **Draft** of your assistant.

The screenshot shows the "Team Skills" page. The top navigation bar includes "Skill sets" and "Team Skills". A dropdown menu under "Team Skills" shows "Team Skills" and "Zeeves draft" (which is highlighted with a green box). The main content area displays a table with columns "Name" and "App". It shows one entry: "No skills". Below the table, there is a note: "Click **Manage skills** to give this team digest specific abilities." A "Manage skills" button is located in the top right corner.

3. Click the **Connections** tab.

The screenshot shows the "Zeeves draft" team page. The top navigation bar includes "Skill sets" and "Connections" (which is highlighted with a green box). The main content area displays a table with columns "Name" and "App". It shows one entry: "No skills". Below the table, there is a note: "Click **Manage skills** to give this team digest specific abilities." A "Manage skills" button is located in the top right corner.

4. Click the **Search (🔍)** icon.

Continue to the next section to create actions for your assistant.

Creating actions for your assistant

Now that the skills in your application are connected to your assistant, you are ready to create actions that are tied to those skills. Learn more about building actions [here](#)

Configure the number of input fields

Before configuring actions, it is important to modify a setting within watsonx Orchestrate that allows triggered skills to display as forms (versus conversational skills).

1. Click your (a) profile icon and then click (b) **Settings**

Learn more about configuring input fields [here](#).

The screenshot shows the 'Skill sets' section of the 'Zeeves draft' application. On the left, there's a sidebar with 'Skills' and 'Connections' tabs. The main area lists an application named 'Ansible Controller Skills - z skills' which has 2 skills, is connected by 'Team', and is connected by 'andrew@jones-tx.com'. At the bottom, there are pagination controls for 'Items per page: 5' and '1-1 of 1 items'.

2. Click the **Skill configurations** tab.

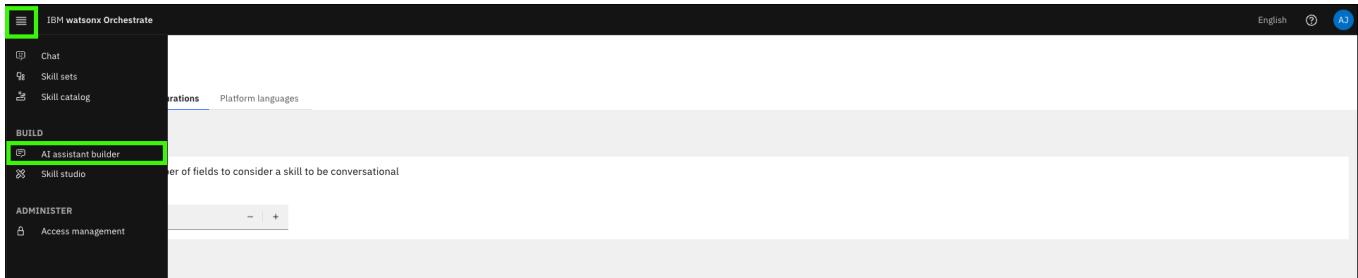

The screenshot shows the 'Settings' page with the 'Skill configurations' tab selected. Under 'Skill configurations', there's a note: 'Set default for maximum number of fields to consider a skill to be conversational'. Below this is a text input field labeled 'Number of form fields' containing the value '0', with a minus sign '-' and a plus sign '+' to its right.

3. Enter 0 for the **Number of form fields**.

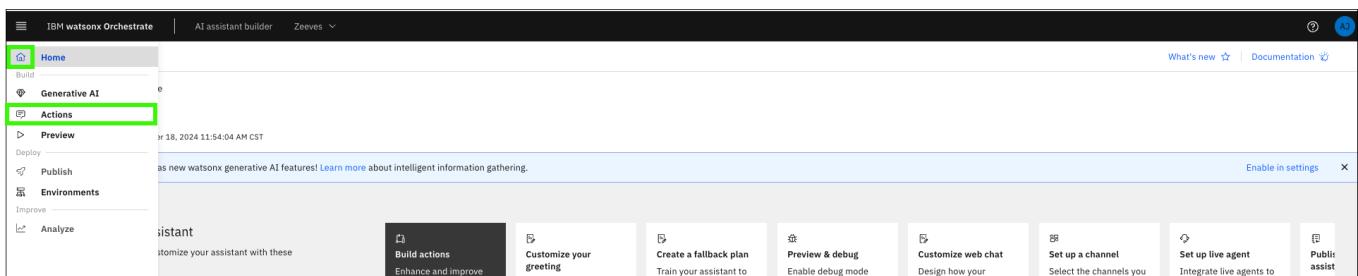

The screenshot shows the 'Settings' page with the 'Skill configurations' tab selected. The 'Number of form fields' input field is highlighted with a green box. The value '0' is entered in the field.

Create actions

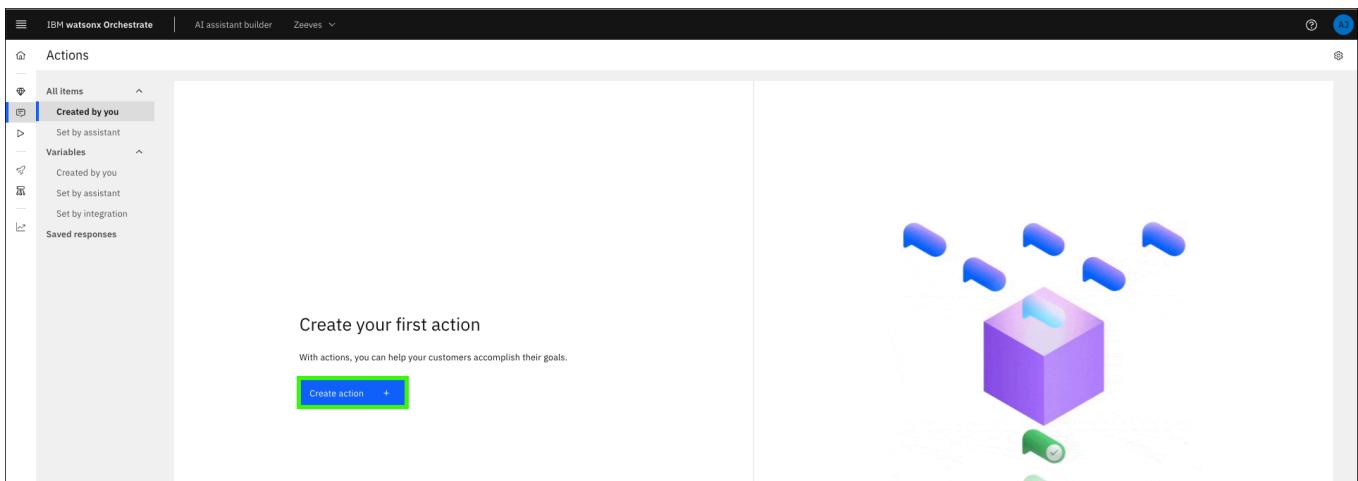

1. Click the main menu and select **AI assistant builder**.

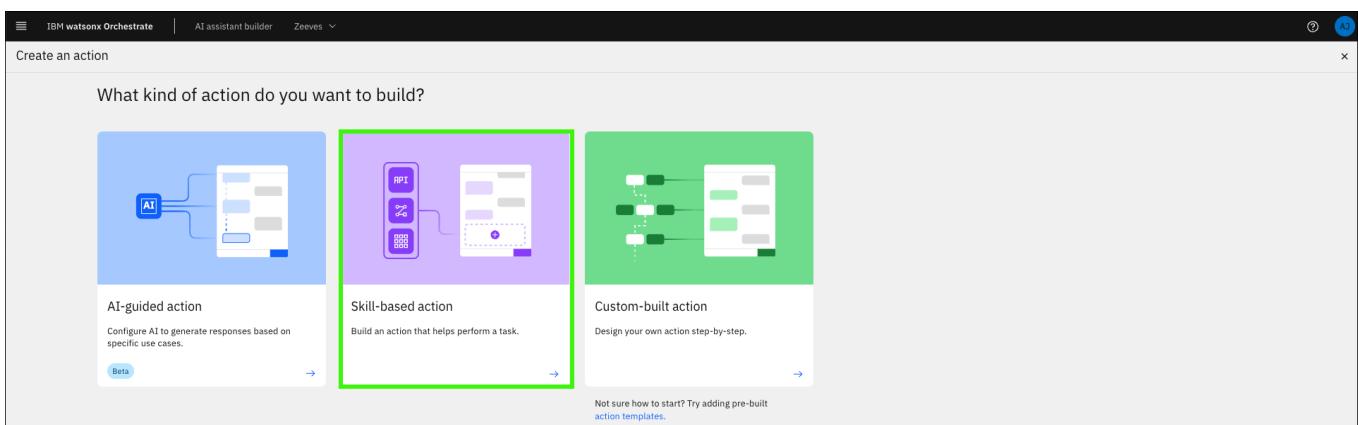

2. Hover over the **Home** icon (🏠) and click **Actions**.

3. Click **Create action**.

4. Click the **Skill-based action** tile.

5. Select the **z/OS Gather Facts** tile and click **Next**.

Note, it may take a minute for the page to display the action tiles. The date that is shown in the **z/OS Gather Facts** tile reflects when you added the skill to your application.

The screenshot shows a list of skills under the heading "Build an action from a skill". The "z/OS Gather Facts" skill is selected and highlighted with a green border. The "Next" button at the top right is also highlighted with a green box.

- On the **New action** dialog, (a) enter a prompt a user of the assistant might use to initiate the action and then (b) click **Save**.

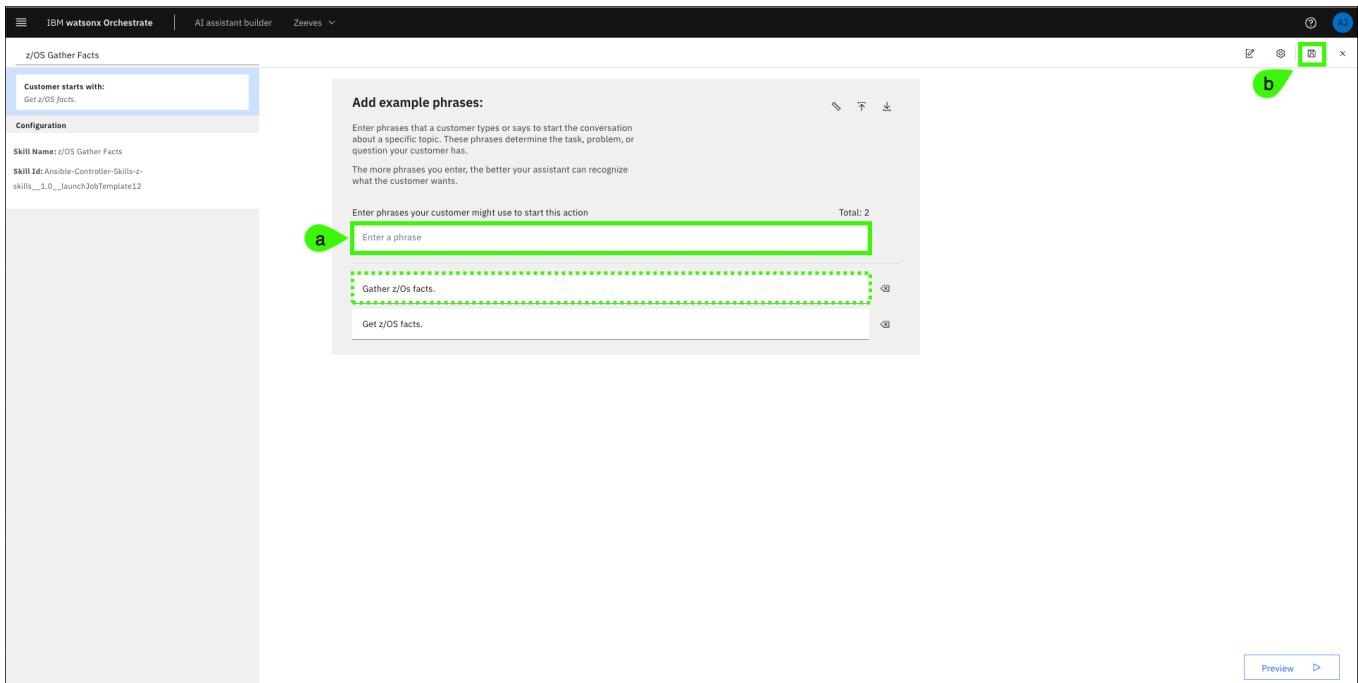

Sample prompts:

Get z/OS facts

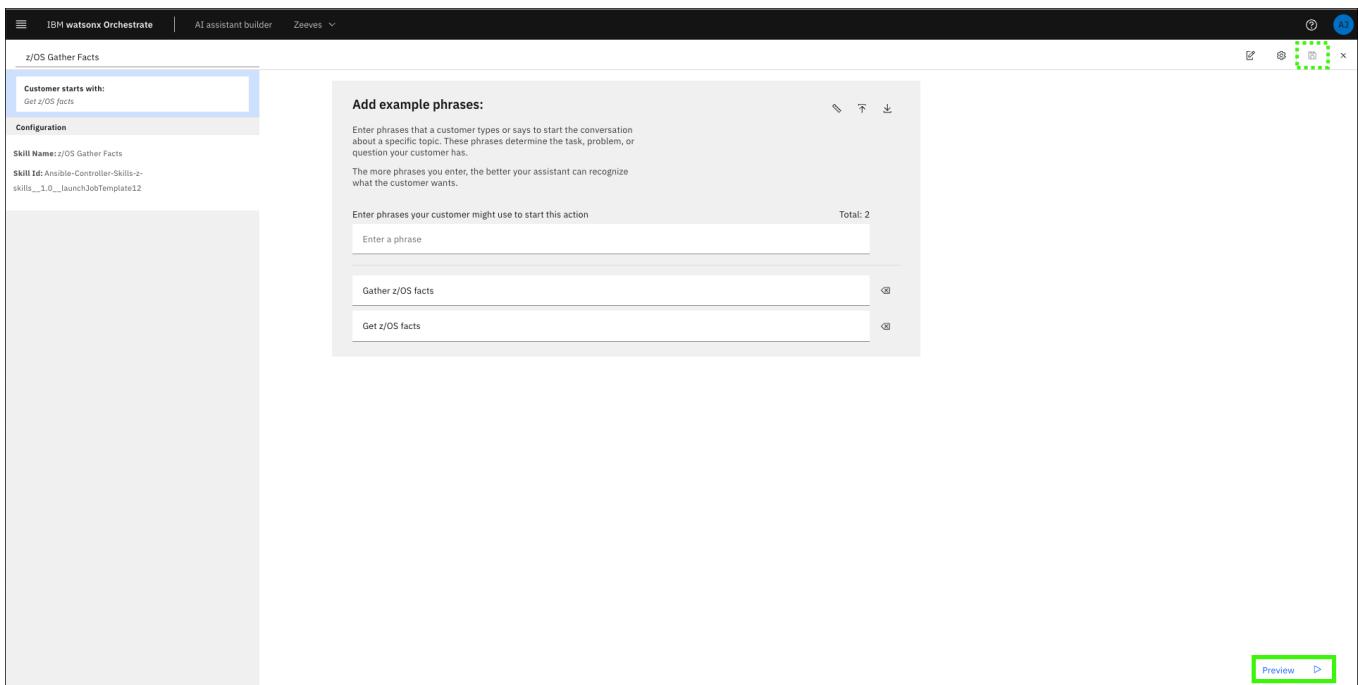

Gather z/OS facts

The screenshot shows the configuration for the "z/OS Gather Facts" skill. A modal window titled "New action" is open, prompting for example phrases. The input field contains "Get z/OS facts." and the "Save" button is highlighted with a blue box and a green box around the entire modal.

- Add any extra prompts (a) and then click the save (b) (b).

8. Click Preview.

9. Enter one of the prompts you specified in step 9 or 10.

Prompt:

Get z/OS facts

The screenshot shows the configuration interface for the 'z/OS Gather Facts' skill. On the left, there's a sidebar with 'Customer starts with:' set to 'Get z/OS facts'. The main area has a 'Configuration' section with 'Skill Name: z/OS Gather Facts' and 'Skill Id: Ansible-Controller-Skills-z-skills_1.0._launchJobTemplate12'. Below this is an 'Add example phrases:' section where two phrases are listed: 'Gather z/OS facts' and 'Get z/OS facts'. To the right is a 'Preview' window showing a conversation: 'User' says 'Get z/OS facts', and 'Assistant' responds with 'Welcome, how can I assist you?'. A green box highlights the user's message.

10. Review the returned results and record the job number.

If an error is generated or the action is not performed and only search results are returned, review the following Troubleshooting section.

This screenshot is similar to the one above but includes a preview of the conversation history. The 'Preview' window shows a message from 'User' at 12:55 PM: 'Get z/OS facts'. The 'Assistant' response is 'Welcome, how can I assist you?'. Below this, a message from 'User' at 1:04 PM: 'Get z/OS facts' is shown, followed by a detailed log entry: 'You 1:04 PM Get z/OS facts' with a green dashed box around it. The log continues: '1:05 PM Conversational skill called z/OS Gather Facts recognized' with a green dashed box around it, 'job : 12' with a green dashed box around it, and 'status : pending' with a green dashed box around it. A note at the bottom says 'There are no additional steps for this action. Add a new step or end the action.' A green dashed box also surrounds the entire log entry. A green arrow points to the 'Get z/OS facts' message in the preview window.

Verify the job in the Ansible Automation Platform console

Return to the Ansible Automation Platform (AAP) console and review the job information.

1. Click **Jobs** and then click the **job** number that you recorded in the previous step for the **z/OS Gather Facts** skill.

Name	Status	Type	Start Time	Finish Time	Actions
12 - z/OS Gather Facts	Successful	Playbook Run	12/5/2024, 7:17:32 AM	12/5/2024, 7:17:41 AM	

2. Review both the **Details** and **Output** for the **z/OS Gather Facts** job.

Recall, that in the assistant, the contents shown in the **Output** of the Ansible job were not displayed.

```

25 }
26
27 TASK [Print out all gathered facts about the z/OS host.] **** 07:17:38
28 ok: [zos_host] => {

46         "iotime": "..."
}

```

IBM watsonx Assistant for Z provides utility skills to retrieve the job output. It is also possible to create a skill flow that executes the **z/OS Gather Facts** skill followed by the **Retrieve job output** utility skill in sequence; passing the job ID from the first skill to the second to view the output within the assistant. Creating a skill flow is covered in the next section.

Troubleshooting

X Skill returns "Sorry, we're having issues generating a response" or the action is not performed and only search results are returned.

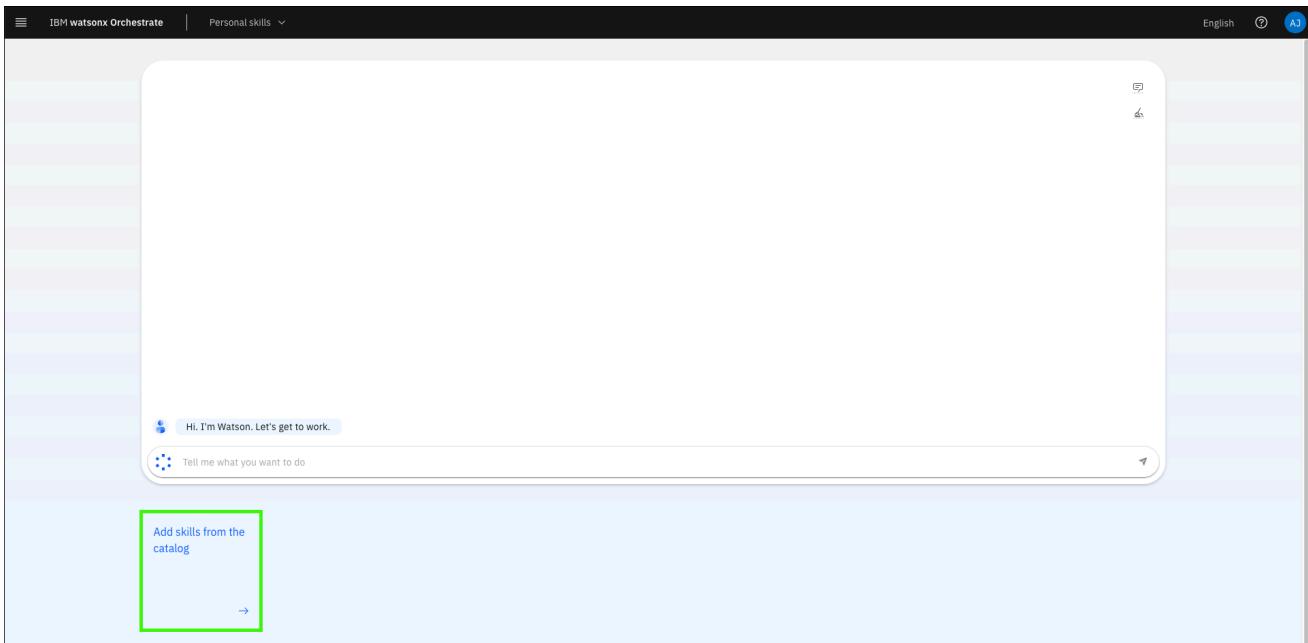

The screenshot shows the AI assistant builder interface. On the left, there's a sidebar with sections like Configuration, Customer starts with:, and Add example phrases:. Under Configuration, the Skill Name is set to "z/OS Gather Facts" and the Skill Id is "Ansible-Controller-Skills-z-skills_1.0_launchJobTemplate1". In the main area, there are two input fields: "Enter phrases your customer might use to start this action" containing "Get z/OS facts" and "Gather z/OS facts", with a note "Total: 2". To the right, there's a "Preview" window showing a simulated chat session. The customer says "Welcome, how can I assist you?", and the bot responds with "Gather z/OS facts". Below this, a message from the bot says "10:46 AM Conversational skill called z/OS Gather Facts recognized". A red error message follows: "Sorry, we're having issues generating a response." Below it, two yellow boxes appear: "Error in the response" with a "Details" link and "Skill error" with an "Inspect" link. A note at the bottom states "There are no additional steps for this action. Add a new step or end the action."

This error appears to be an intermittent issue when a skill is first added. To resolve, add the skill to your personal skills catalog using the steps that follow. If you encounter the issue, try the steps that follow:

1. Expand the main menu and select Chat.

The screenshot shows the main menu of IBM Watsonx Assistant. The "Chat" option is highlighted with a green box. Other menu items include "Skill sets", "Skill catalog", "AI assistant builder", "Skill studio", "Access management", and "Administrator". To the right, there's a sidebar with "Add example phrases:" and a note about entering customer start phrases. Below that is a "Enter phrases your customer might use to start this action" field with "Total: 2" and an "Enter a phrase" button. On the far right, there's a "Preview" section showing a simulated chat session.

2. Click Add skills from the catalog.

3. Search for the skill app you created earlier and click the tile for your app.

The screenshot shows the 'Skill catalog' page. At the top, it says "Skills are grouped by app. Select an app to see all the skills that use that app." Below is a search bar with the text "z skills". The main area is titled "Apps" and shows several skill categories as tiles:

- Salessoft (47 skills)
- Cognos (8 skills)
- Skill flows (167 skills)
- Adobe Workfront (37 skills)
- Webex (14 skills)
- IBM Process Mining (2 skills)
- Salesforce Chatter (5 skills)
- Ansible Controller Skills - z skills (2 skills)** (highlighted with a green box)
- Interview top candidates using ... (2 skills)
- Reveal your existing applicants... (7 skills)
- Seismic (22 skills)
- FreshService (25 skills)
- Workday HCM (36 skills)
- ZoomInfo (26 skills)

4. Click **Add skill** for all the skills you want to add.

The screenshot shows the details for the "Ansible Controller Skills - z skills" app. At the top, it says "(2)". Below is a search bar with the text "Search skills". The main area shows two skill cards:

- z/OS Gather Facts**: "z skills - This sample playbook demonstrates the z/OS gather facts module, which pulls z/OS-...". It has an "Add skill +" button highlighted with a green box.
- z/OS Ping**: "z skills - This playbook pings the z/OS host to test connectivity.". It also has an "Add skill +" button highlighted with a green box.

5. Click **Connect app**.

Ansible Controller Skills - z skills (2)

z/OS Gather Facts

z/OS Ping
z skills - This playbook pings the z/OS host to test connectivity.

Connected

8. Try one of the prompts you created for your skill.

Prompt:

Gather z/OS facts

The screenshot shows the IBM Watsonx Assistant interface. At the top, it says "IBM Watsonx Orchestrate" and "Personal skills". On the right, there are language and accessibility settings. The main area has a message from Watson: "Hi, I'm Watson. Check out the skills in the catalog to see how I can help you." Below this, a button labeled "Gather z/OS facts" is highlighted with a green border. A callout box contains the text: "Here are the results of the z/OS Gather Facts skill." It lists one skill: "z/OS Gather Facts" with status "pending" and job number "12". There are minus and plus buttons to adjust the view. At the bottom, a blue bar says "Tell me what you want to do". To the left, a box says "Add skills from the catalog" with an arrow pointing right. To the right, another box says "Ansible Controller Skills - z skills" with a green dashed border around it, and a small "2 skills" badge.

You should now be able to run the skill through the assistant preview.

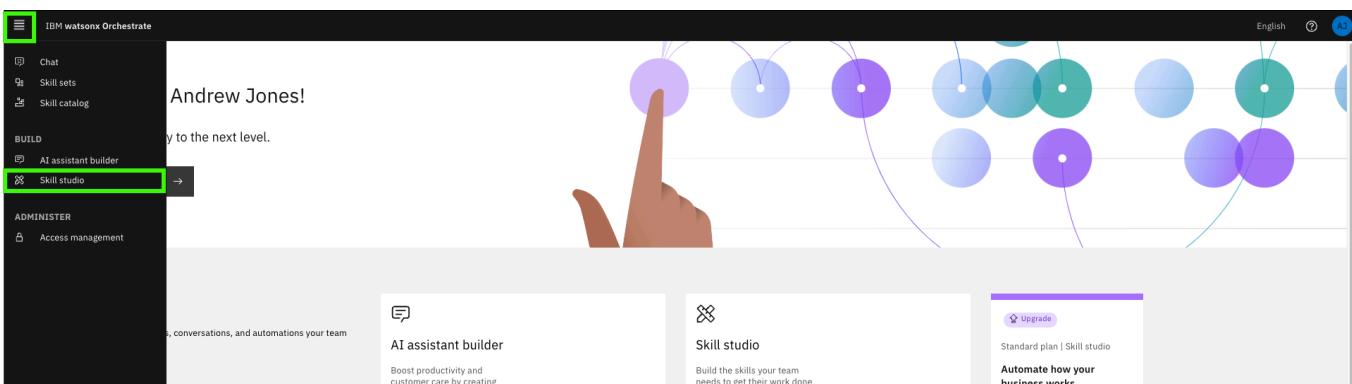

Creating skill flows

In the previous section, you ran the **Gather z/OS facts** skill, but the output was not displayed in the assistant. To both run the action and display the results, a skill flow is needed. Skills are often more valuable when combined with other skills. You can create a skill flow to use two or more skills together to finish a task (like returning the output of a previous skill). When you create a skill flow, you map the output of one skill as the input for subsequent skills. Learn more about creating skill flows [here](#).

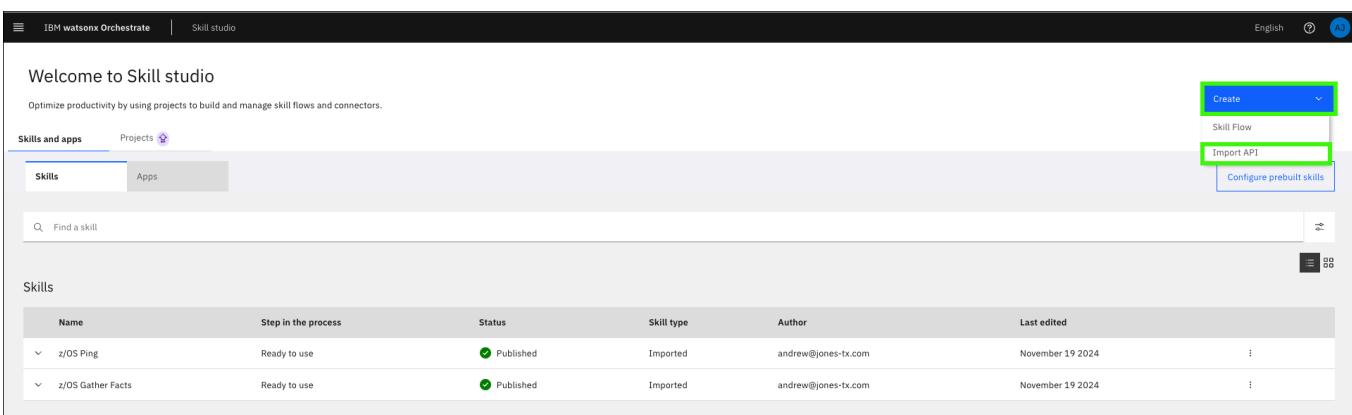

As mentioned in a previous section, default utility skills that are provided with the watsonx Assistant for Z skills collection. The **Retrieve job output** utility skill is used to return the output of a skill.

Add the utility skill

1. Open IBM watsonx Orchestrate **Skill studio**.

2. Expand **Create** and click **Import API**.

3. Click the **z/OS Skills accelerator (Trial)** tile.

The screenshot shows the 'Skill studio' tab selected in the top navigation bar. Below it, the 'Add skills' section is displayed. At the top left, there are two radio buttons: 'Choose the source' (selected) and 'Select the skills'. Below these are three buttons: 'From an app', 'From a file', and 'OpenAPI builder (experimental)'. A green box highlights the 'z/OS Skills accelerator (Trial)' card, which includes the subtext 'Import your Ansible, JCL/REXX automation to Watsonx Orchestrate'. Other cards shown include 'IBM Cloud Pak for Business Automation - On premises', 'IBM Cloud Pak for Business Automation as a service', 'UiPath RPA & Business Automation', 'IBM Robotic Process Automation (RPA)', and 'IBM Business Automation Workflow as a service'. Below the cards, a box labeled 'IBM Operational Decision Manager as a service' has a small icon of a person with a gear.

4. Enter the following values in the **z/OS Skills accelerator** form and then click **Connect**.

Use the **URL**, **User Name**, and **Password** values recorded in the **Explore Ansible Automation Platform** section earlier.

a: Connection Type: `ansible`

b: Application Name: <use the same application name from the previous section>

c: Connection URL: <enter the URL for your AAP UI>

d: User Name: <enter the AAP User Name (for UI access)>

e: Password: <enter the AAP User Password>

f: Search Pattern: `*`

The screenshot shows the configuration dialog for the 'z/OS Skills accelerator (Trial)'. The right side of the dialog contains several input fields with green boxes around them, each labeled with a letter from a to f. The fields are: 'Connection Type' (a: `ansible`), 'Application Name' (b: `z`), 'Connection URL' (c: `https://itzvi-aap-phdhuzza.techzone.ibm.com`), 'User name' (d: `admin`), 'Password' (e: `*****`), and 'Search Pattern' (f: `*`). The bottom right of the dialog has 'Cancel' and 'Connect' buttons, with 'Connect' highlighted in blue.

5. Expand **Ansible Utility Skills** and click **Ansible Utility Skills**.

6. Select **Retrieve job output** and click **Save as draft**.

7. Click the ellipses (...) for the **Retrieve job output** skill and select **Enhance this skill**.

8. Review the skill settings and then click **Publish**.

Name: Retrieve job output
Input: 0/100

5. Click Add Skill in the [z/OS Gather Facts](#) tile.

6. Verify the **z/OS Gather Facts** skill is added to the skill flow.

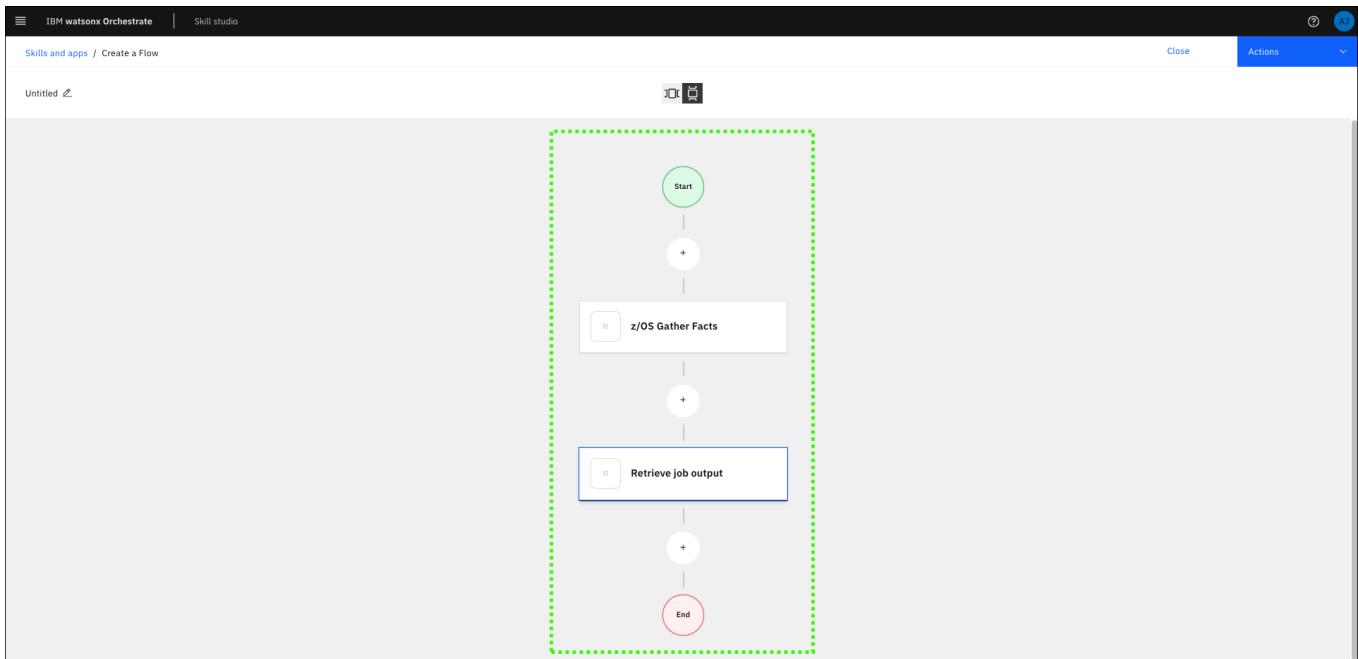

7. Click the **+** icon after the **z/OS Gather Facts** tile.

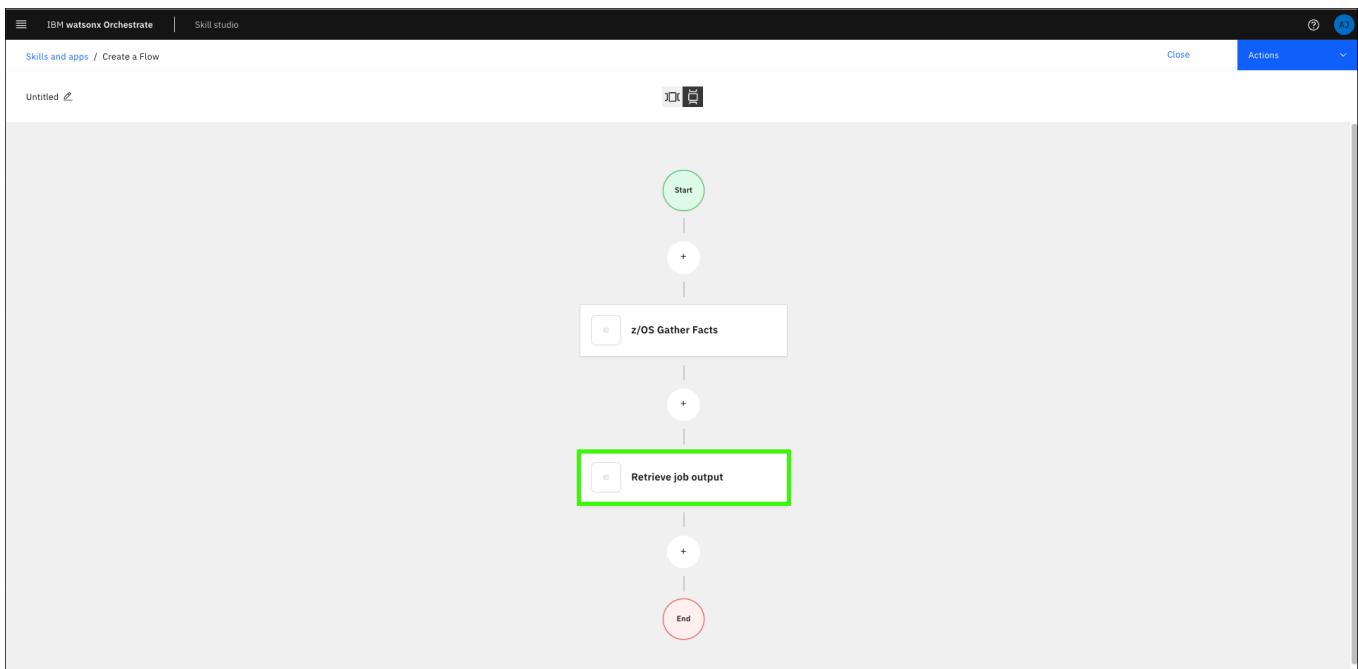

8. Repeat steps 5 and 6 for the **Retrieve job output** skill.

After adding the **Retrieve job output** skill, your skill flow should look like:

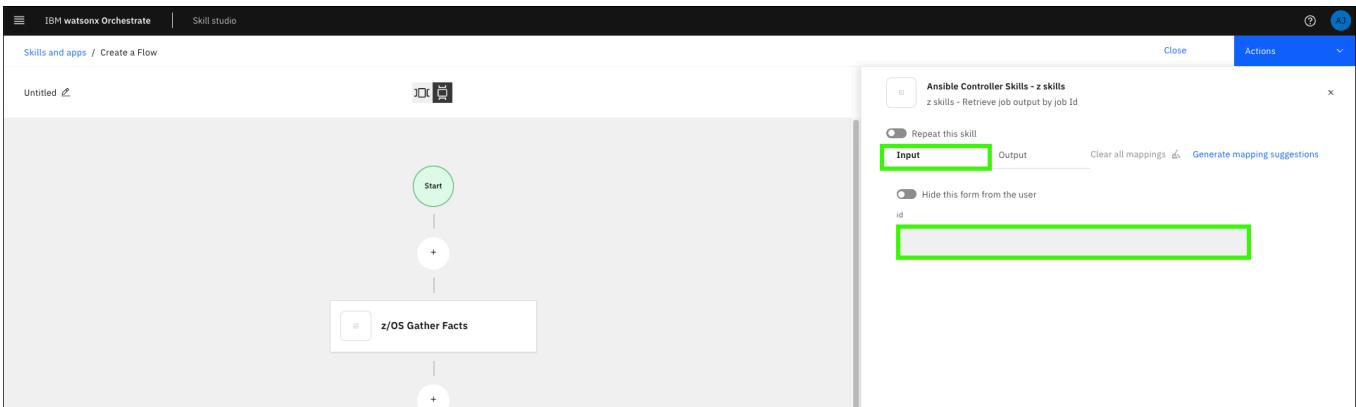

Next you must map the output values of the first skill to the input of the second skill. In this case, pass the job ID output from **z/OS Gather Facts** as an input for **Retrieve job output**.

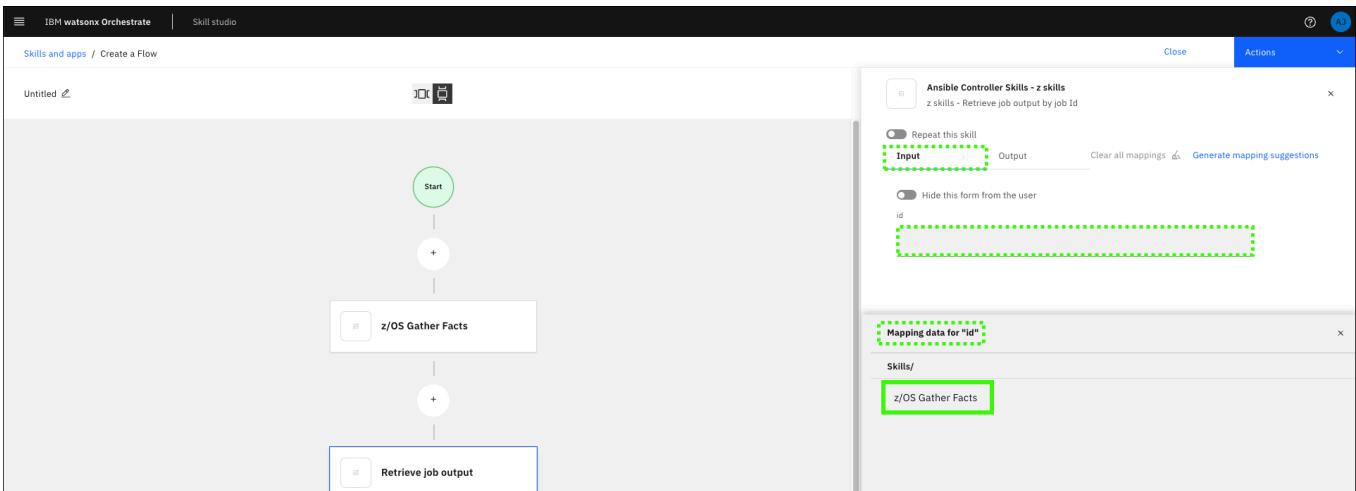

9. Click the **Retrieve job output** tile.

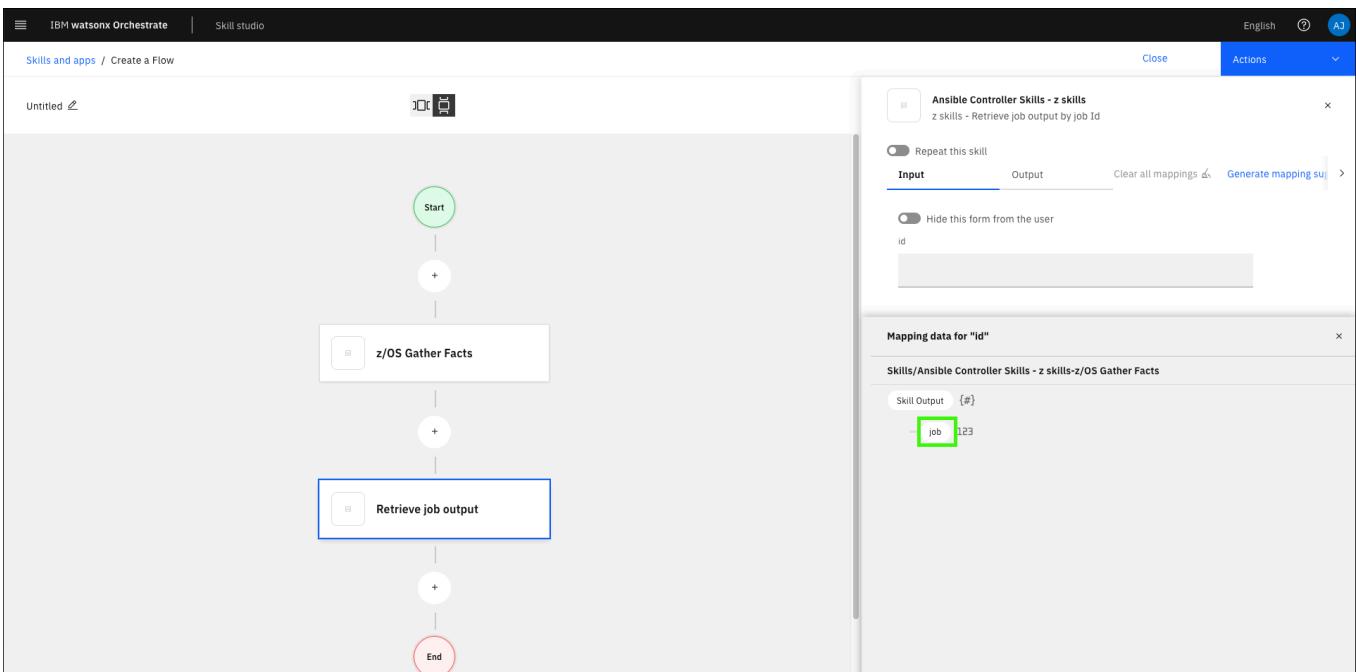

10. Select the **Input** tab and click the **id** field.

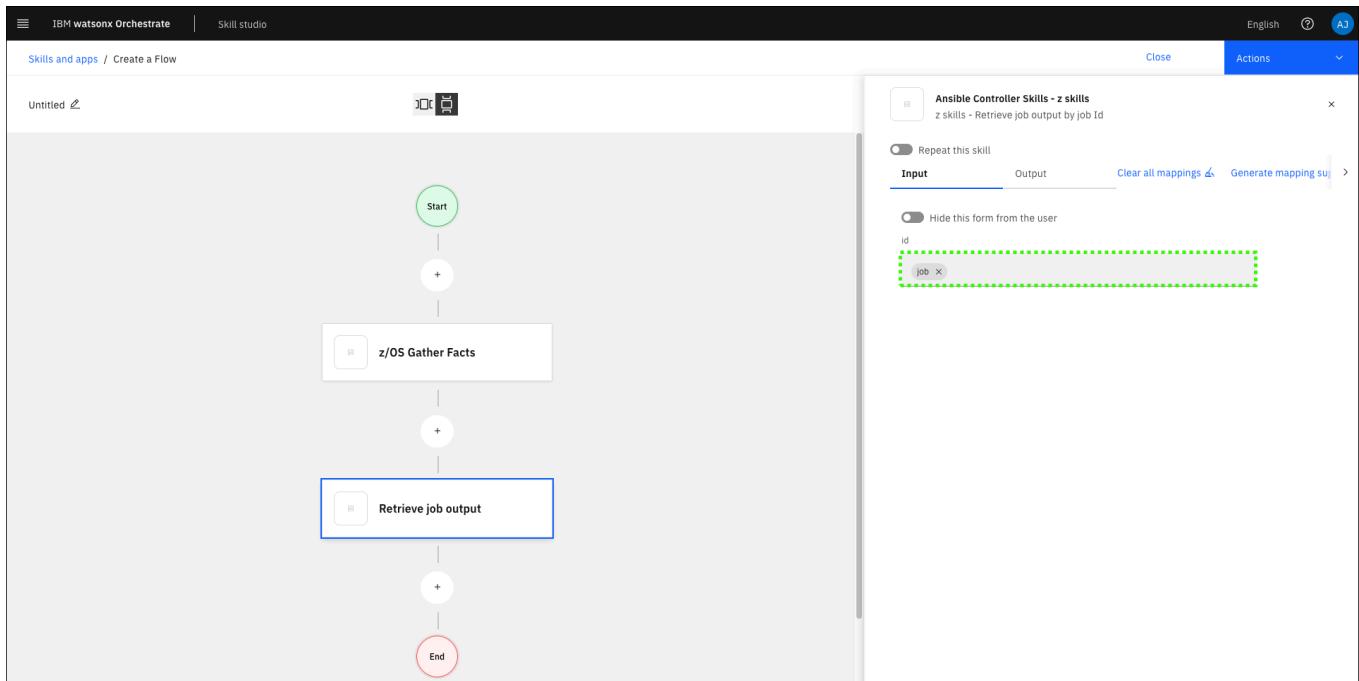

11. Click the **z/OS Gather Facts** skill in the **Mapping data for "id"** section.

12. Click the **job** icon.

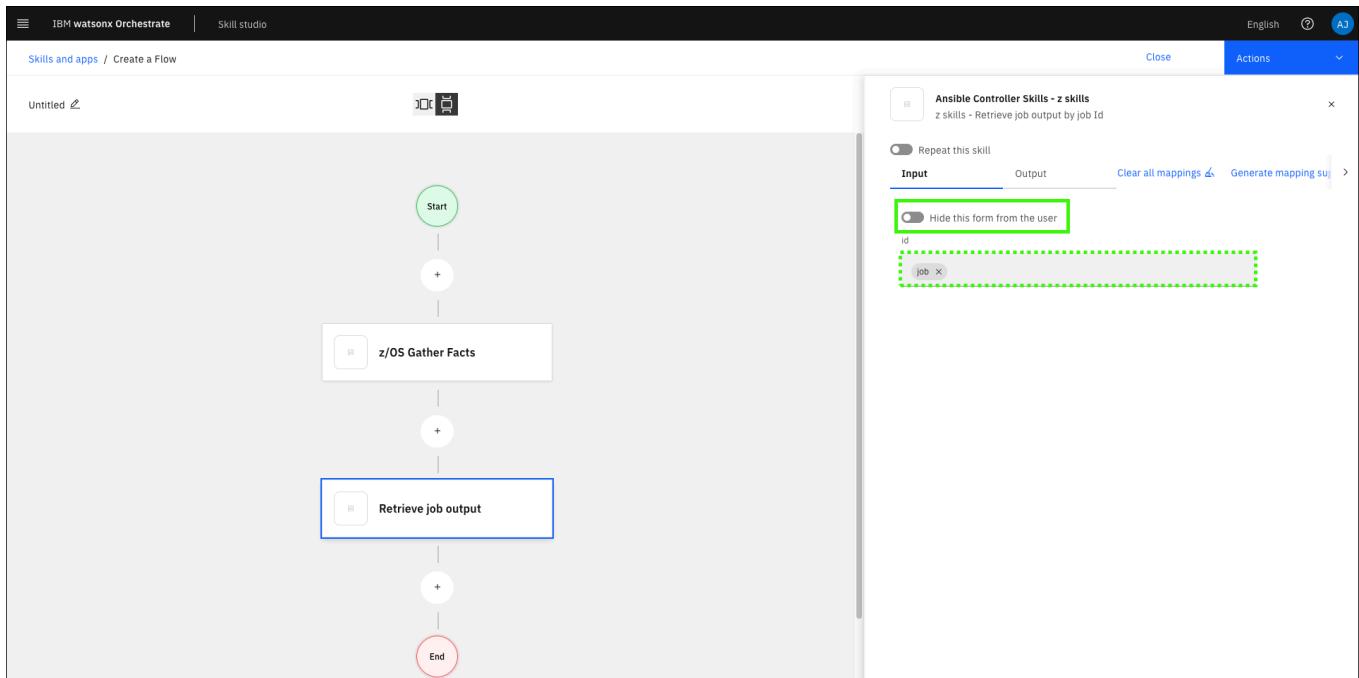

13. Verify that the **job** appears in the **id** field.

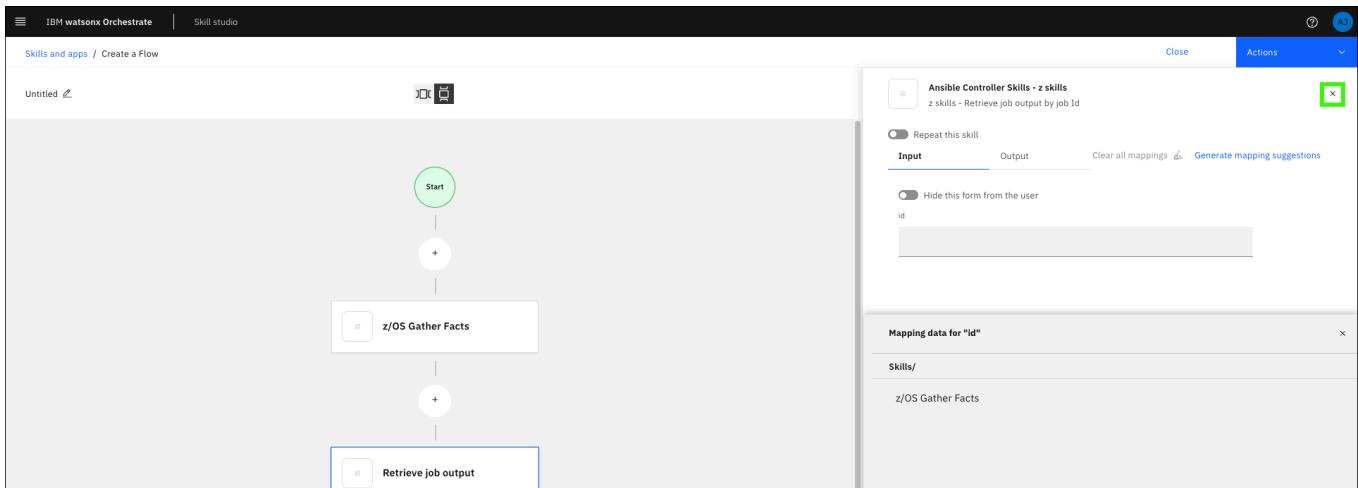

14. Optionally, toggle the **Hide this from the user** setting.

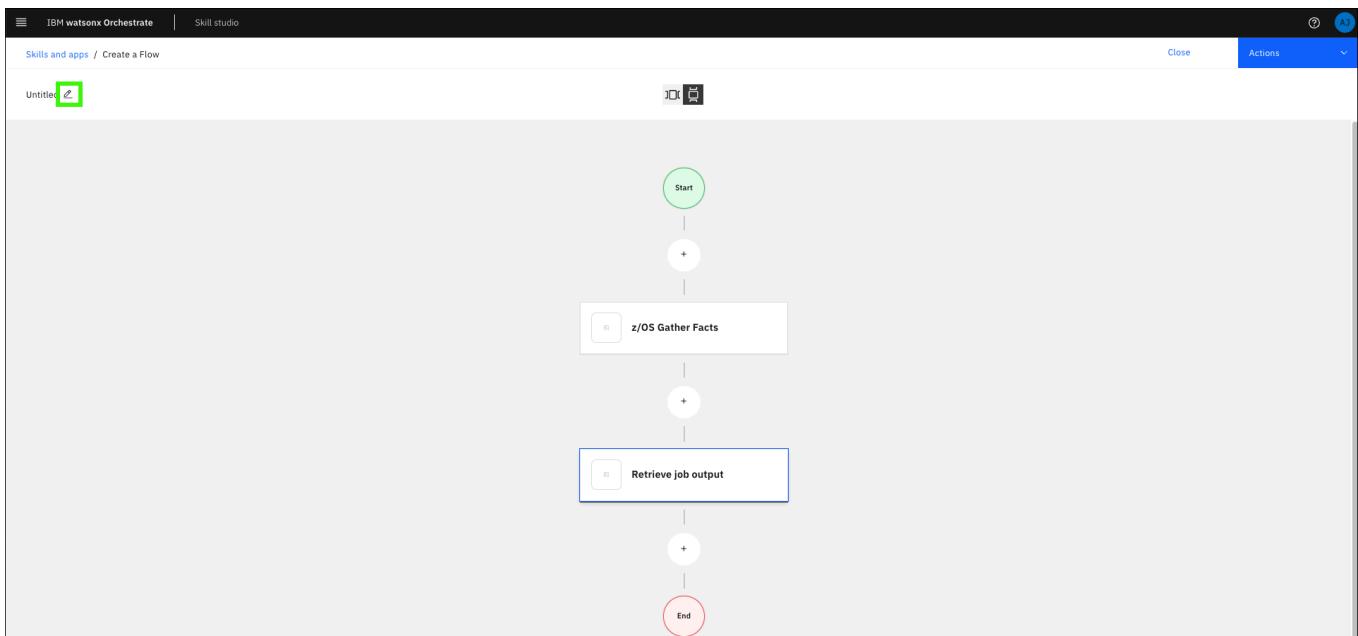

For this lab guide, this option is left disabled. Learn more about this option [here](#).

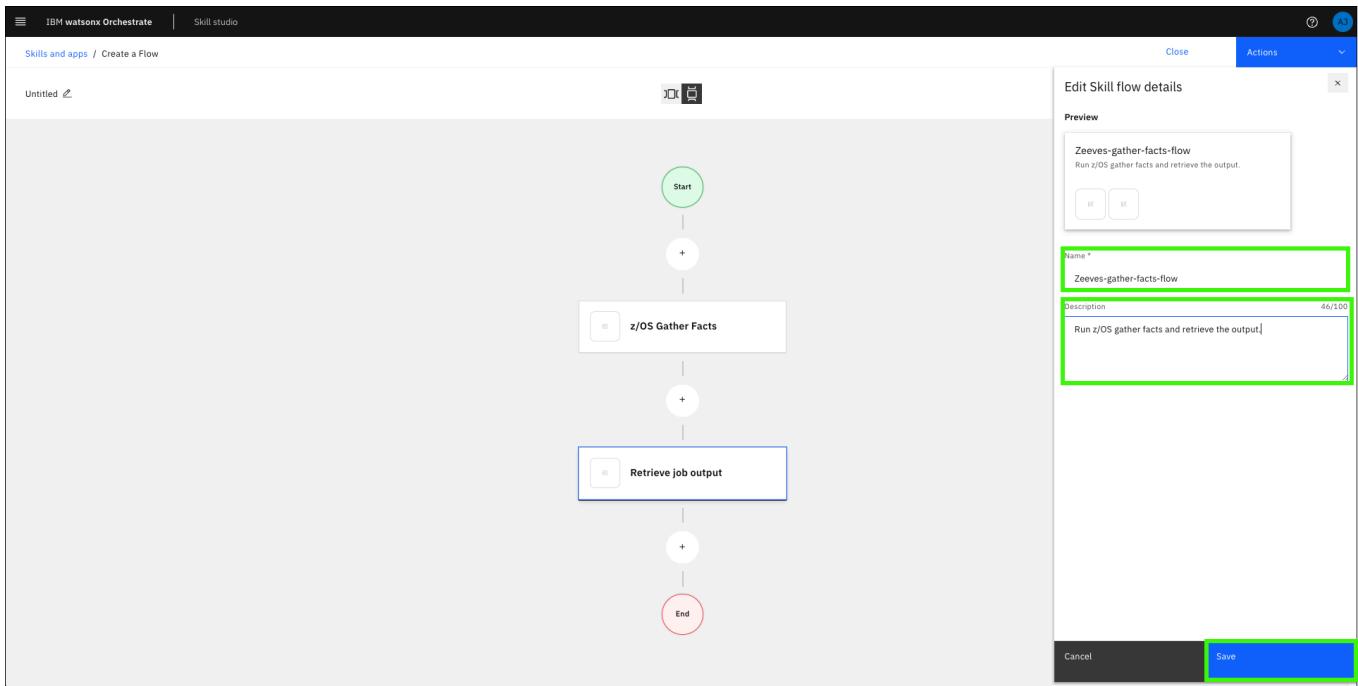

15. Click the **x** to close mapping window.

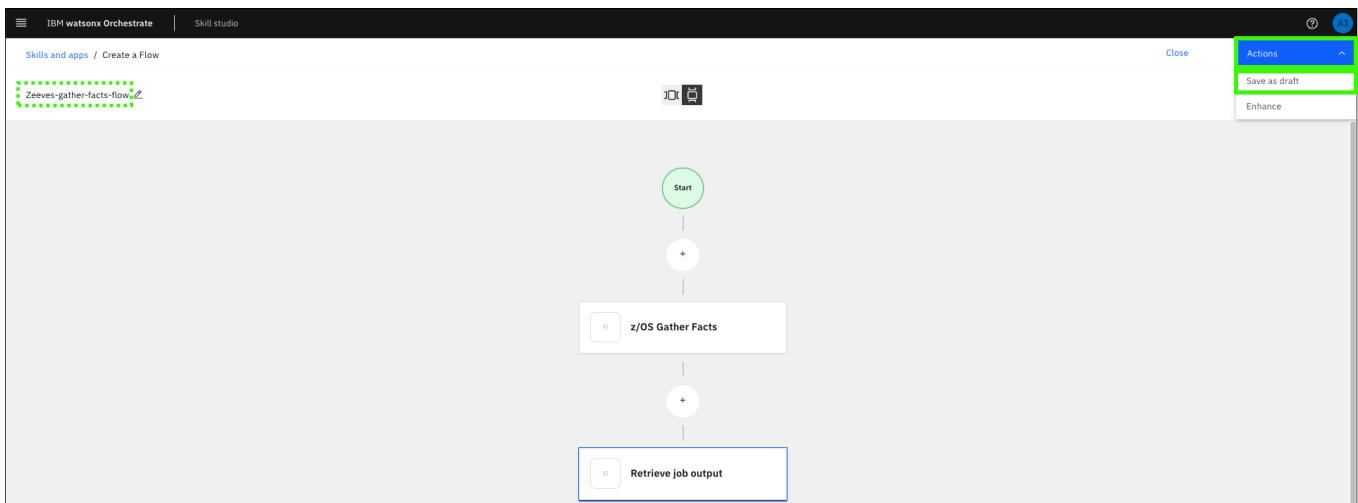

16. Click the pencil ().

17. Enter a (a) Name and (b) Description for your skill flow and then (c) click Save.

18. Expand the **Actions** pull-down and click **Save as draft**.

19. Expand the **Actions** pull-down and click **Enhance**.

On the **Enhancing the skill** pages, you can:

- modify the skill name, description, and version
- add phrases (prompts) that will be recognized by the assistant to call the skill flow

20. Click the **Phrases** tab.

Skills and apps / Enhance this skill

Enhance the "Zeeves-gather-facts-flow" skill

Add details that will make people want to use this skill.

Name Phrases Next best skills

Phrases are the text your user types in the chat bar to find and use a skill.

Zeeves-gather-facts-flow

Run z/OS gather facts and retrieve the output.

Enter new train phrase

21. Replace the existing **phrases** (prompts) and then click **Publish**.

Notice that the default prompts are either not intuitive (the skill flow name) or a bit verbose. Replace the existing phrases with phrases that you anticipate users will use.

Example prompts:

Show me z/OS facts

Gather and display z/OS facts

Cancel Publish Save as draft

Enable the skill flow in your assistant

1. Click **AI assistant builder** in the main menu.

The screenshot shows the IBM Watsonx Orchestrate interface. The left sidebar has a dark theme with several sections: Chat, Skill sets, Skill catalog, BUILD (with AI assistant builder highlighted), and ADMINISTER (with Access management). The main area is titled "Skill studio" and contains a message: "Objects to build and manage skill flows and connectors." Below this is a table with four rows, each representing a skill flow or connector. The columns are: Step in the process, Status, Skill type, Author, and Last edited. All entries show "Ready to use" as the status, "Published" as the skill type, and "andrew@jones-tx.com" as the author. The last edited date is November 19 2024 for all. A green notification bar at the top right says "Published successful Published skill Zeeves-gather-facts-flow. 15:18:32". A blue button labeled "Configure prebuilt skills" is visible.

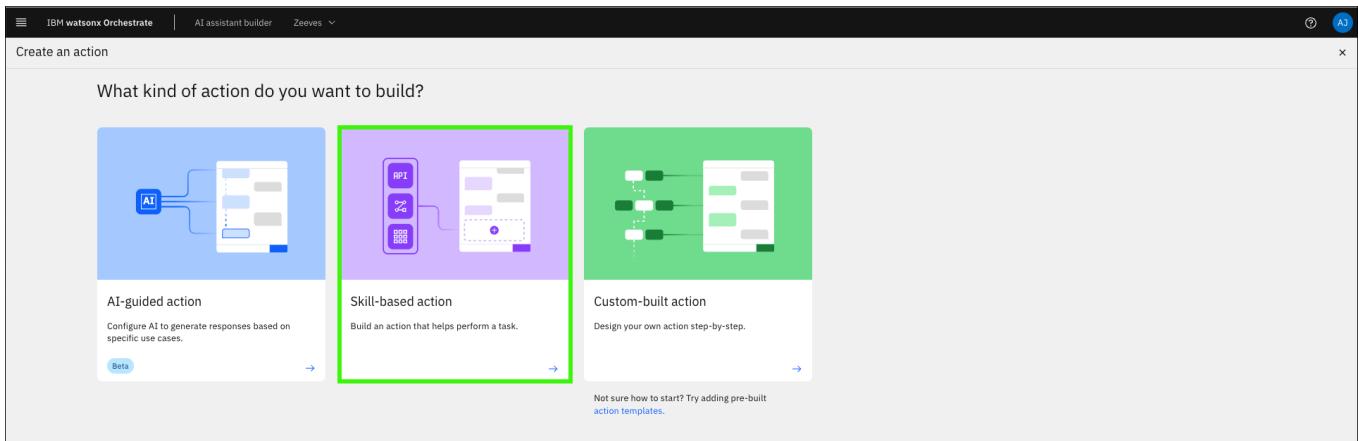

2. Hover over the **Home (🏡)** and click **Actions**.

The screenshot shows the "AI assistant builder" interface. The left sidebar has sections: Home (selected), Build, Generative AI, and Actions (highlighted with a green box). The main area displays a series of cards under the heading "Actions" with the sub-section "Preview". The cards include: "Build actions" (Enhance and improve your assistant's actions.), "Customize your greeting" (Welcome your users in a unique way that aligns with your brand.), "Create a fallback plan" (Train your assistant to adapt to specific situations.), "Preview & debug" (Enable debug mode when you preview your assistant.), "Customize web chat" (Design how your assistant shows up in your live environment.), "Set up a channel" (Select the channels you want to deploy your assistant to.), and "Set up live agent" (Integrate live agents to transfer your users to when you edit web chat.). Below these cards is a diagram showing a "Default behavior" node branching into "General purpose" and "Conversational search" nodes, which then lead to a "Search" node. A green box highlights the "Actions" section in the sidebar.

3. Click **New action**.

The screenshot shows the "Actions" list interface. The left sidebar has sections: Actions (selected), All items, Created by you (highlighted with a green box), Variables, and Saved responses. The main area lists actions under "Created by you /". A search bar at the top says "Filter by name". The table columns are: Name, Last edited, Examples count, Steps count, and Status. One entry is shown: "z/OS Gather Facts" (Last edited 2 hours ago, Examples count 2, Steps count 0, Status green). A green box highlights the "New action" button at the top right of the list.

4. Click the **Skill-based action tile**.

5. Click the skill flow that you created earlier and then click **Next**.

Note: it may take a minute for the tiles to appear on the screen.

The screenshot shows the 'Build an action from a skill' screen. It lists various skills in a grid:

Skill Name	Description	Last updated

The 'Zeeves-gather-facts-flow' skill is selected and highlighted with a green border. The 'Next' button is visible in the top right corner.

6. Enter an example prompt for the skill and click **Save**.

You can use one of the prompts you used earlier for the skill flow.

The screenshot shows the configuration screen for the 'Zeeves-gather-facts-flow' skill. It includes sections for 'Customer starts with:' and 'Add example phrases:'.

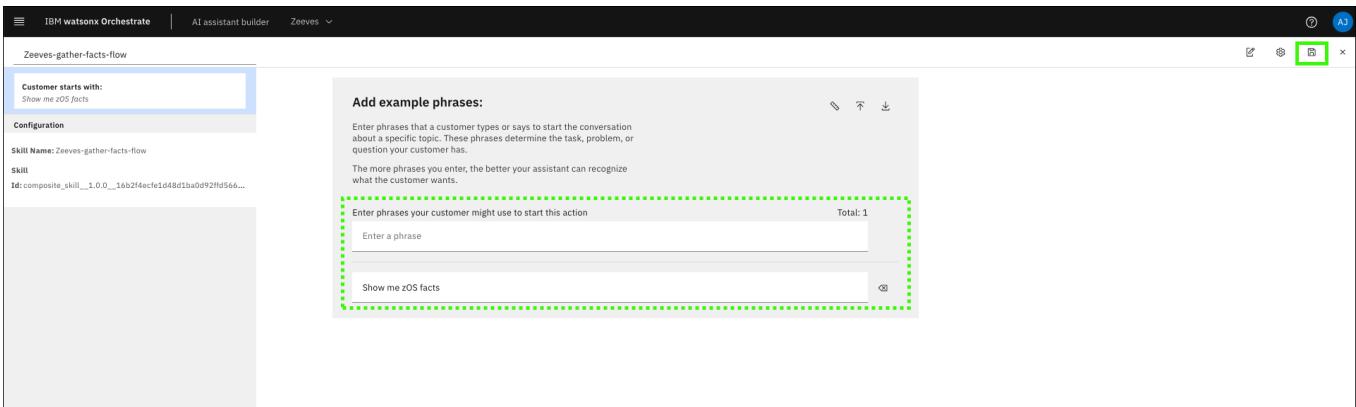

Customer starts with:
Example: I want to pay my credit card bill.

Add example phrases:
Enter phrases that a customer types or says to start the conversation about a specific topic. These phrases determine the task, problem, or question your customer has.
The more phrases you enter, the better your assistant can recognize what the customer wants.

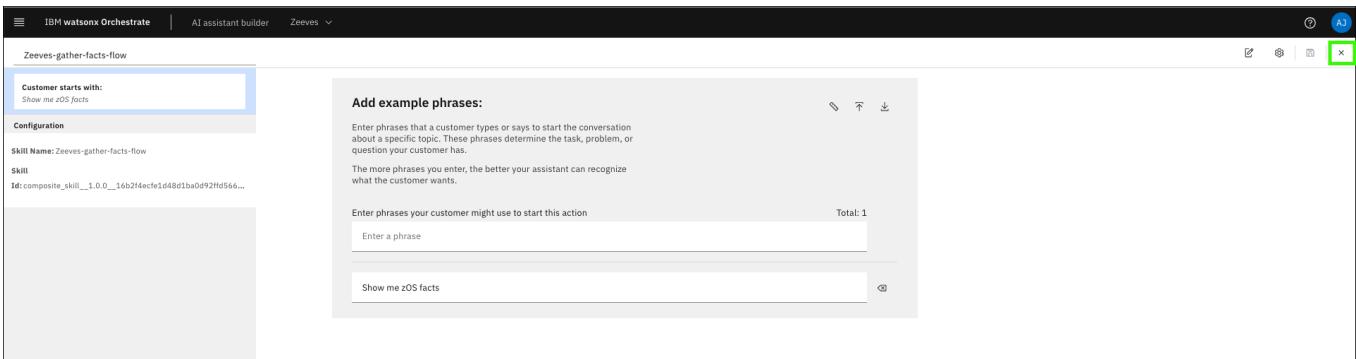

New action
What does your customer say to start this interaction?
Show me z/OS facts

Save button is highlighted with a blue border.

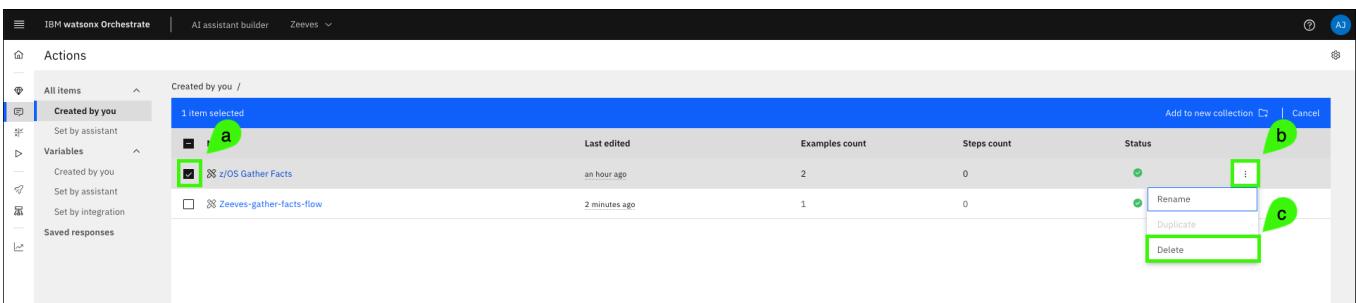

7. Enter any additional phrases (prompts) and then click the **save** (💾).

8. Click close (x).

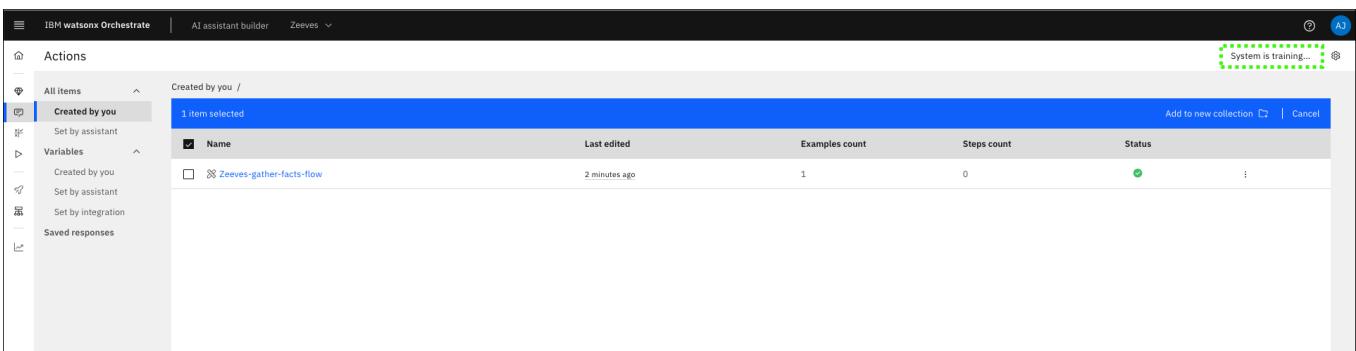

9. Select the *original* skill that you created (a) (not the skill flow you just created), click the ellipses (b), and then click **Delete** (c).

10. Wait for system training to complete.

Note: The message changes to "System is trained" and then disappears.

11. Click **Preview**.

Zeeves-gather-facts-flow

id * 13

Cancel Apply

13. Wait 10 seconds and then click **Apply**.

Note: It is important to wait for the first job to complete before submitting the second job in the flow.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with 'Actions' selected. Under 'Created by you', there's a list item 'Zeeves-gather-facts-flow'. On the right, a preview window shows a conversation between a user and a bot. The user says 'Show me zOS facts' at 8:13 AM, and the bot responds with 'Zeeves-gather-facts-flow' at 8:13 AM.

14. Review the results from the skill flow.

Use both scroll bars in the assistant preview to review all the returned information. The output is similar to what was seen in the AAP web console. The character strings like [0;32m are special characters that are not properly displayed in the assistant preview interface.

The screenshot shows the same interface as before, but the preview window now displays a large amount of JSON-like data. A portion of the data is highlighted with a green dashed box. The data includes parameters like 'ipl_volume', 'load_param_device', and 'operator_prompt_flag'.

Sample output from the Z/OS gather facts flow.

```

The previous scenario might or might not be relevant for your client's use case. The scenario illustrates how to sequence skills together in a skill flow to create an action that your assistant triggers based on prompts that use the pre-configured Ansible automation templates. You are encouraged to create your own skill flows and prompts that use other skills available within the AAP instance. As an example, create a skill flow for the **z/OS Ping** skill. Be sure to add the **Retrieve job output** skill to view the results.

Next, learn about custom-built actions.

Creating custom-built actions

To this point, you learned how to:

- import skills into Watsonx Orchestrate
- add applications with those skills to your assistant
- create skill-based actions for your assistant
- combine skills in a skill flow

You can also create **custom-built** actions. Custom-built actions have actions with different steps to take in conversations and form sequences of prompts that define the conversation experience. The steps can be defined with or without conditions, which help control the custom responses. Steps within the custom action can end with routing to conversational search, triggering another existing subaction, and other actions. Custom-built actions are a powerful way of customizing the user's experience.

Learn more about creating custom-built actions [here](#).

Importing pre-packaged z/OS skills

Provided with Version 2 of watsonx Assistant for Z is a set of pre-packaged skills. These skills are used to automate various tasks on z/OS, such as running different console commands and retrieving logs from batch jobs.

The list of pre-packaged skills available include:

- Authorized program list
- z/OS IPL Information
- Display zOS parmlib datasets
- UNIX System Services options
- Display zOS subsystems
- List spool files
- Retrieve dataset content
- Retrieve spool file content
- Retrieve z/OS Management Facility (OSMF) job status

IBM watsonx Orchestrate requires that any OSMF environment you connect to for skill execution has certificate authority (CA) signed certificates.

As an example, the following are console commands that are used in some of the pre-packaged skills:

- Authorized Program list - `operator command -> d prog,lnklist`
- z/OS IPL Information - `operator command -> d iplinfo`
- Display zOS parmlib datasets - `operator command -> d parmlib`

You can import the pre-packaged skills to your sandbox environment by downloading the compressed file [here](#) and following [these instructions](#).

Extract the embedded JSON file and modify the file for your environment by following [these instructions](#).

Publishing and deploying your assistant

To this point, acting as an Assistant Builder, you built the assistant, configured conversational search, and added skills and automations. You tested your assistant by using the **preview** capability of AI Assistant Builder. The **preview** capability is a closed environment for experimenting with prompts.

After your assistant is finalized, you can publish it to make it available to users. Each assistant that you create comes with two **environments**: *draft* and *live*. You configured your assistant in the draft environment. Each environment has its own set of IDs, URLs, and service credentials referenced by external services.

The **Environments** page in the AI assistant builder has tabs for managing both the **Draft environment** and the **Live environment**:

This screenshot shows the 'Environments' page in the AI assistant builder. The 'Draft' tab is selected, indicated by a green dashed border. The 'Live' tab is also present. On the left, there's a sidebar with icons for environments, channels, and extensions. The main area has sections for 'Draft environment', 'Channels' (listing 'Web chat'), and 'Resolution Methods'. Under 'Resolution Methods', there's a 'Draft content' section with a 'Last edited' timestamp and a 'Draft' status indicator, which is also highlighted with a green dashed border. A callout arrow points from the 'Draft' status in the 'Resolution Methods' section to the 'Draft' status in the 'Last edited' timestamp.

This screenshot shows the 'Environments' page in the AI assistant builder. The 'Live' tab is selected, indicated by a green dashed border. The 'Draft' tab is also present. The layout is similar to the previous screenshot, with sections for 'Live environment', 'Channels' (listing 'Web chat'), and 'Resolution Methods'. Under 'Resolution Methods', there's a 'Content' section with a 'No published version' message, which is highlighted with a green dashed border. A callout arrow points from the 'No published version' message in the 'Content' section to the 'No published version' message in the 'Resolution Methods' section.

The **Draft environment** contains all your in-progress work in the Actions, Preview, and Publish pages. Use the **Draft environment** tab to build out your assistant and use for internal testing before deployment. Any integrations (channels) that you use for the **Draft environment** are unique to that environment, and changes to draft integrations don't affect the **Live environment**.

Publish the assistant

Each time that you publish, you're creating a new version of the assistant, for example V1. When you publish your content, you're creating a snapshot of the draft content, resulting in a version.

Versions do not contain integration configurations or environment settings

Published versions contain all of the content from actions, including settings and variables. **However, versions do not contain integration configurations or environment settings.** Integration configurations and environment settings must be configured manually in each environment.

For managing quality-control and versioning, the Live environment is the version of the assistant to give to users.

Follow these steps to publish the first version of your assistant by using Assistant Builder:

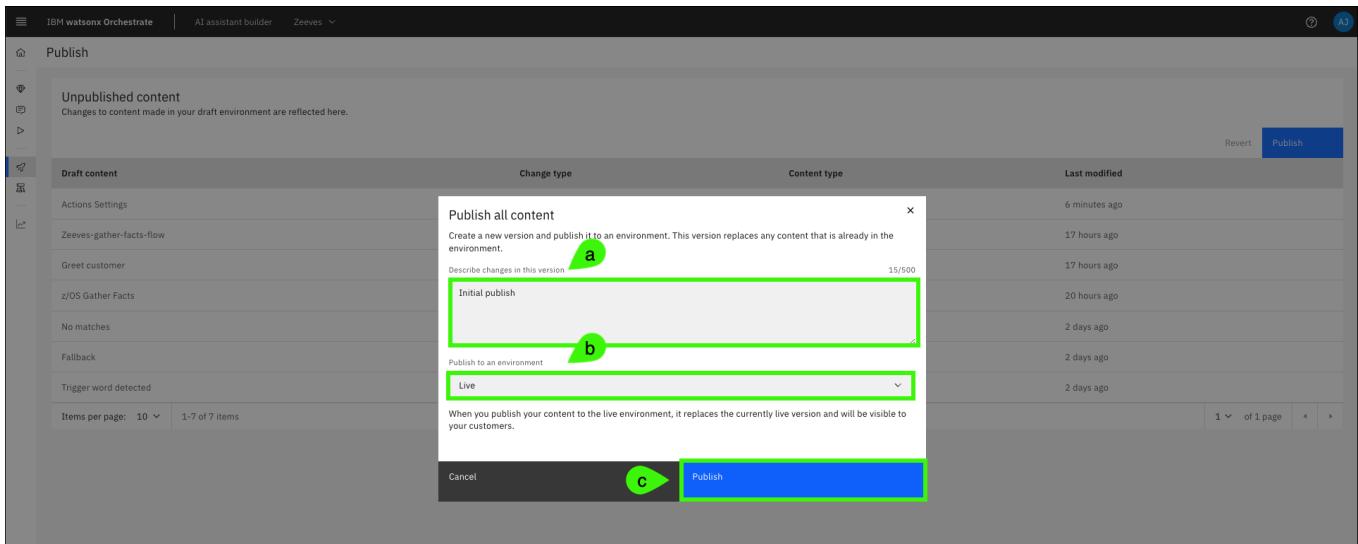

1. Hover over the **Home** icon () and click **Publish**.

The screenshot shows the IBM Watsonx Orchestrate interface with the "AI assistant builder" tab selected. On the left, a sidebar has "Publish" highlighted with a green border. The main area displays several cards for customizing an assistant, such as "Build actions", "Customize your greeting", "Create a fallback plan", "Preview & debug", "Customize web chat", "Set up a channel", "Set up live agent", and "Publish assist". Below these cards is a diagram showing a "Default behavior" node branching into "General purpose" and "Conversational search" nodes, which then lead to a "Search" node. A tooltip for "Default behavior" states: "The default behavior of your assistant depicts the structure of your assistant."

2. Click **Publish**.

The screenshot shows the "Publish" screen. At the top, there's a message: "Unpublished content. Changes to content made in your draft environment are reflected here." Below this is a table titled "Draft content" with columns: "Change type", "Content type", and "Last modified". The table lists several items: "Zeeves-gather-facts-flow" (Updated, Actions, 30 minutes ago), "Greet customer" (Updated, Actions, 31 minutes ago), "Actions Settings" (Updated, Settings, 2 hours ago), "Fallback" (Updated, Actions, 2 hours ago), "No matches" (Updated, Actions, 2 hours ago), and "Trigger word detected" (Updated, Actions, 2 hours ago). At the bottom of the table are pagination controls: "Items per page: 10" and "1-6 of 6 items". On the right side of the table, there are "Revert" and "Publish" buttons, with "Publish" highlighted with a blue border.

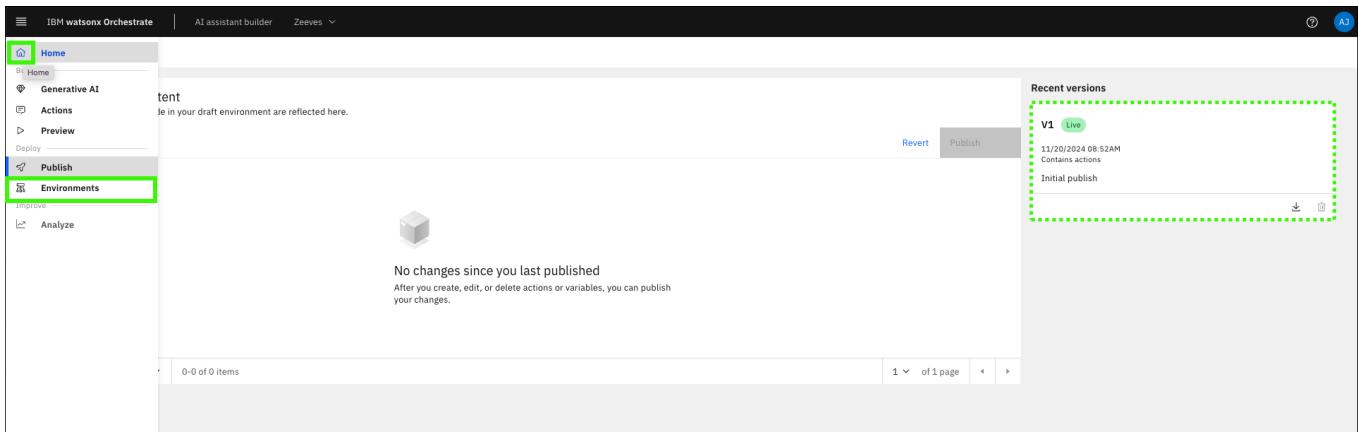

3. Enter a description of the changes (a), set the environment to **Live** (b), and then click **Publish** (c).

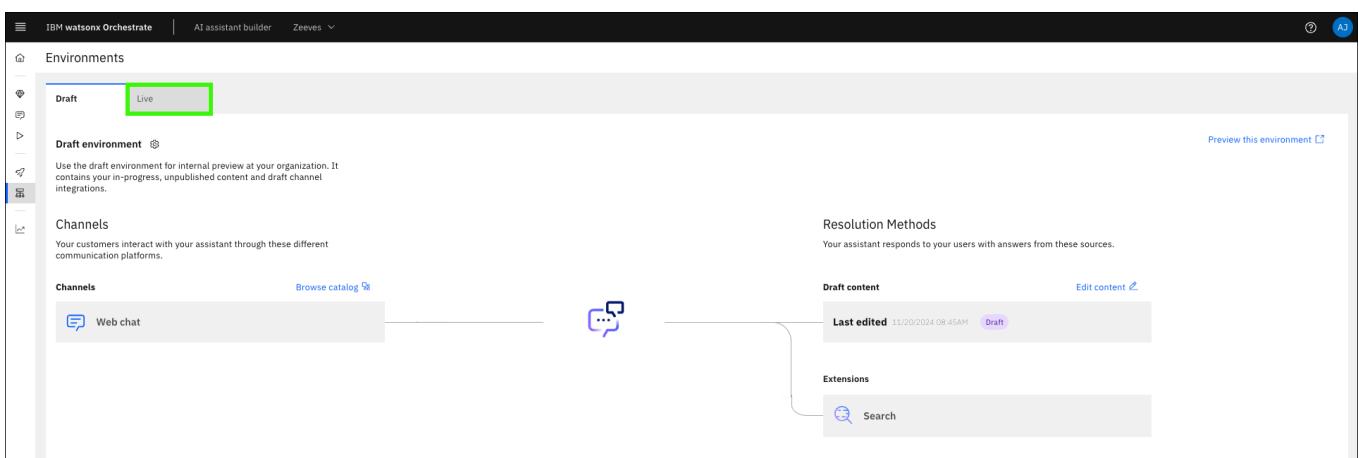

Configure the live environment

Important: When the live environment is created, the settings from the draft environment are not carried over (for example, the configuration of the OpenSearch instance used for conversational search).

1. Hover over the Home icon (🏡) and click Environments.

2. Click Live.

3. Click Web chat.

The screenshot shows the IBM Watsonx Orchestrate interface with the 'Live' environment selected. In the 'Channels' section, the 'Web chat' option is highlighted with a green box. Other channels listed are 'Browse catalog' and 'Web chat'. To the right, there are sections for 'Resolution Methods', 'Content' (version V1, live), and 'Extensions' (Search).

4. Customize the live assistant as you see fit.

On the **Style** tab, you're able to set the Assistant name that is displayed on the chat window when users are interacting with the assistant. For pilots or demos, consider personalizing this name for the client. Also in the **Style** tab, you can set the themes and display settings of the chat windows, including the ability to enable the IBM Watermark and enable streaming.

On the **Home** tab, you enable and customize the greeting message from the assistant when the user accesses the assistant chat. You are also able to set **Conversation starters** that are displayed in the chat window. When selected by the user, the text of the conversation starter is sent as a prompt, so it is important that your assistant is trained and tested to answer correctly. It is highly recommended to remove the default conversation starters and create your own. The ability to add a Background style for the assistant chat window is on the home screen tab.

Explore all the other tabs.

Customize your live environment.

For this lab, toggle **Streaming** on and turn **Suggestions** off on the **Suggestions** tab. You may also want to change the theme to **Dark** to differentiate your draft and live environments.

Customize your chat UI

Update the style to match your brand and your website. A developer can also add more advanced styling changes with code. [Learn more](#)

6. Click Add in the Search tile.

The screenshot shows the 'Live' environment configuration in IBM Watsonx Orchestrate. It includes sections for 'Live environment', 'Channels' (Web chat), 'Resolution Methods' (Content V1), and 'Extensions' (Search). A green box highlights the 'Add +' button under Extensions.

7. Click Custom service.

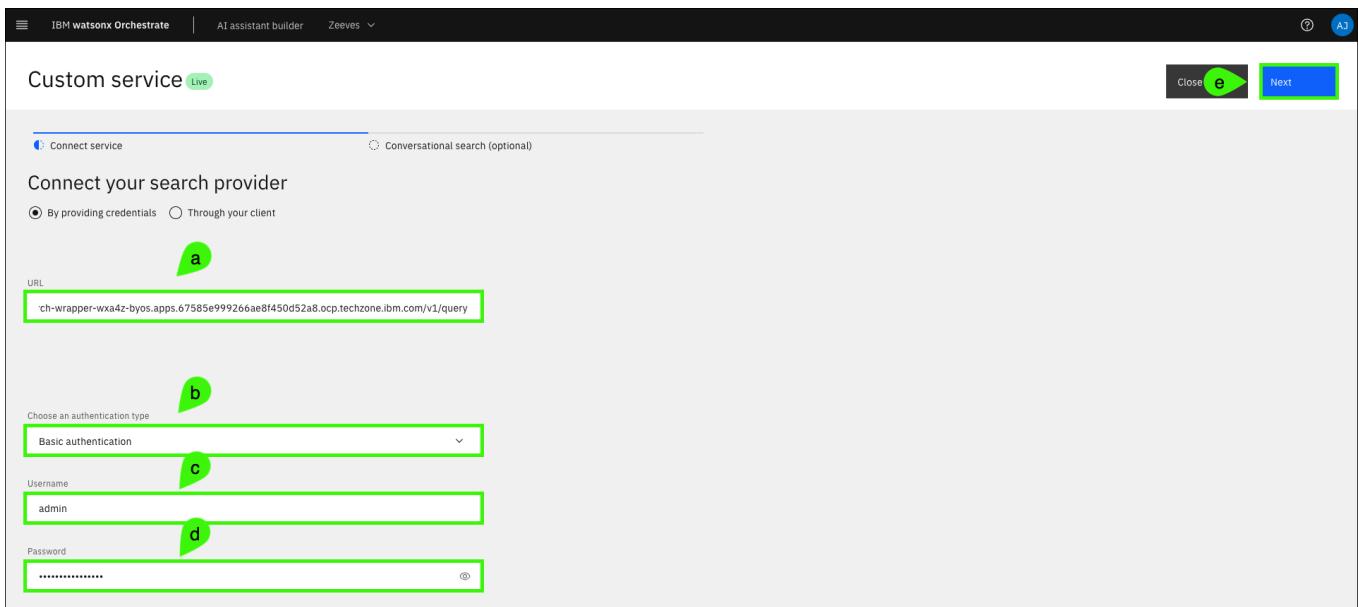

The screenshot shows the 'Set up a new search integration' dialog box. It lists 'Es' (Elasticsearch) and 'Custom service'. The 'Custom service' option is highlighted with a green box.

- Enter the URL for your bring-your-own-search (BYOS) engine (a), select Basic authentication for the authentication type (b), enter admin for the Username (c), enter the password that you specified in the wrapper-creds.yaml file for the Password (d), and then click Next (e).

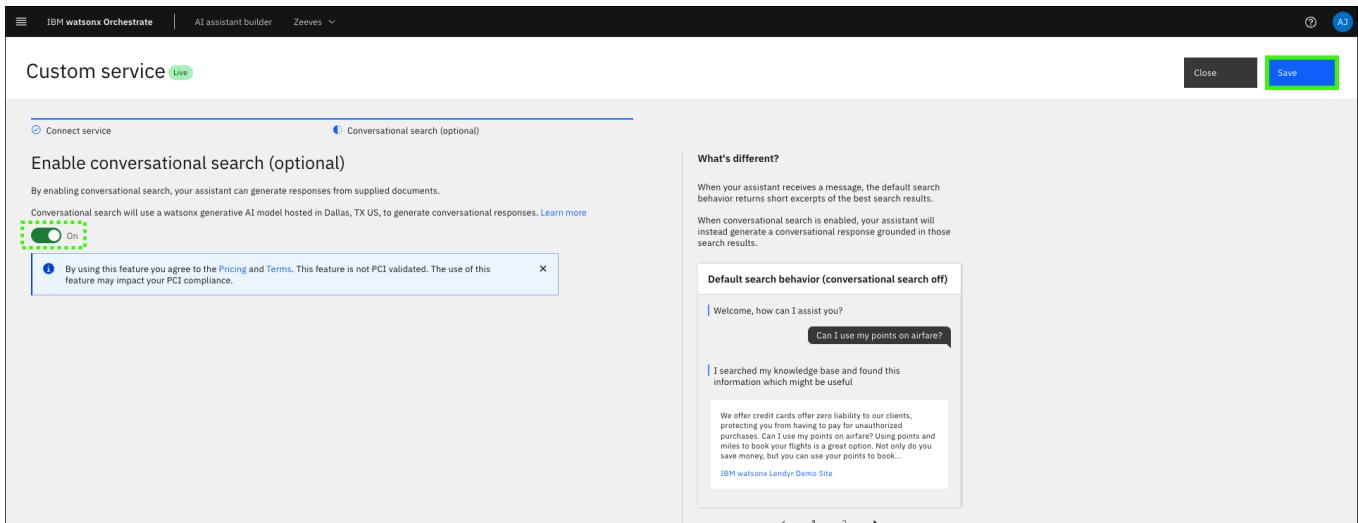

Use the correct URL and authentication type!

Use the URL and credentials for your BYOS OpenSearch engine created earlier [here](#).

9. Verify conversational search is enabled and click Save.

10. Update the **Custom service** settings (a-f), click **Save** (g), and then click **Close** (h).

Customize the settings.

This is your assistant. Feel free to customize the settings. The settings shown below reflect the changes made earlier in the lab guide to the draft version of the assistant. This includes the **Metadata** field to weigh ingested client documents higher using:

```
{ "doc_weight": { "product_docs": 0.2, "customer_docs": 0.8}, "ibm_indices": "*_ibm_docs_slate, *_ibm_redbooks_slate", "standardize": true, "customer_indices": "customer_*" }
```

The screenshot shows the 'Custom service' configuration page in the IBM Watsonx Orchestrate AI assistant builder. The interface includes the following sections and UI elements:

- Top Bar:** IBM Watsonx Orchestrate, AI assistant builder, Zeeves, Close (button h), Save (button g), and A3 (button).
- Section Headers:** Settings, Instance.
- Conversational search:** A note about PCI compliance, a toggle switch labeled 'On' (button a), and two radio button options: 'Single turn' (selected) and 'Entire conversation' (Beta) (button b).
- Search configuration:** A 'Restore default' link, a 'Retrieval confidence threshold' slider with 'Lowest' selected (button c), a 'Generated response length' slider with 'Verbose' selected (button d), and a 'Response confidence threshold' slider with 'Lowest' selected (button e).
- Citations:** A note about citation display, a dropdown menu set to 'All' (button f), and a 'Default filter' section with a note about supported file types.
- Metadata:** A code block containing JSON configuration:

```
{
  "doc_weight": 1.0,
  "product_docs": 0.2,
  "customer_docs": 0.8,
  "ibm_indices": "**.ibm_docs_state",
  "customer_index": "customer_"
}
```
- Search display text:** A note about search display, a 'No results found' link, a 'Connectivity issue' link, and a text area containing the message: "I searched my knowledge base, but did not find anything related to your query".

Connect the skills to the live environment

1. Click **Skill sets** in the main menu.

The screenshot shows the IBM Watsonx Orchestrate interface. The left sidebar has sections for Chat, Skill sets, Skill catalog, BUILD (AI assistant builder, Skill studio), and ADMINISTER (Access management). The AI assistant builder section is expanded, showing a description of what it is and how to use it. On the right, there's a 'Resolution Methods' panel with 'Content' (version V1, live) and 'Extensions' (Search).

2. Select your assistant's live instance in the **Skill sets** list.

The screenshot shows the 'Team Skills' page. The 'Skill sets' list includes 'Team Skills' (selected) and 'Zeeves live'. Below, the 'Skills' section lists 'z/OS Gather Facts', 'Zeeves-gather-facts-flow', and 'Retrieve job output'.

3. Click **Connections**.

The screenshot shows the 'Zeeves live' skill set page. The 'Connections' tab is selected in the top navigation bar. Below, the 'Skills' section lists 'z/OS Gather Facts', 'Zeeves-gather-facts-flow', and 'Retrieve job output'.

4. Search for the application name you specified earlier.

Skill sets

Zeeves live

Skills Connections

These are the applications that are used by the skills in team skill set. Application connections are required to execute skills. Set preference at an application level to enable skills to either use personal or team credentials.

Application	Number of skills	Credential type	Connected by	Action
Ansible Controller Skills - z skills	3	Not specified	-	⋮

Items per page: 5 1-1 of 1 items

5. Click the ellipses (⋮) for your app and then click **Connect app**.

Skill sets

Application	Number of skills	Credential type	Connected by	Action
Ansible Controller Skills - z skills	3	Not specified	-	⋮ i Connect app 1 page < >

Items per page: 5 1-1 of 1 items

6. Click **Connect app**.

Connect to Ansible Controller Skills - z skills

Member credentials
Each team member uses their own credentials to connect to this app and use its skills.

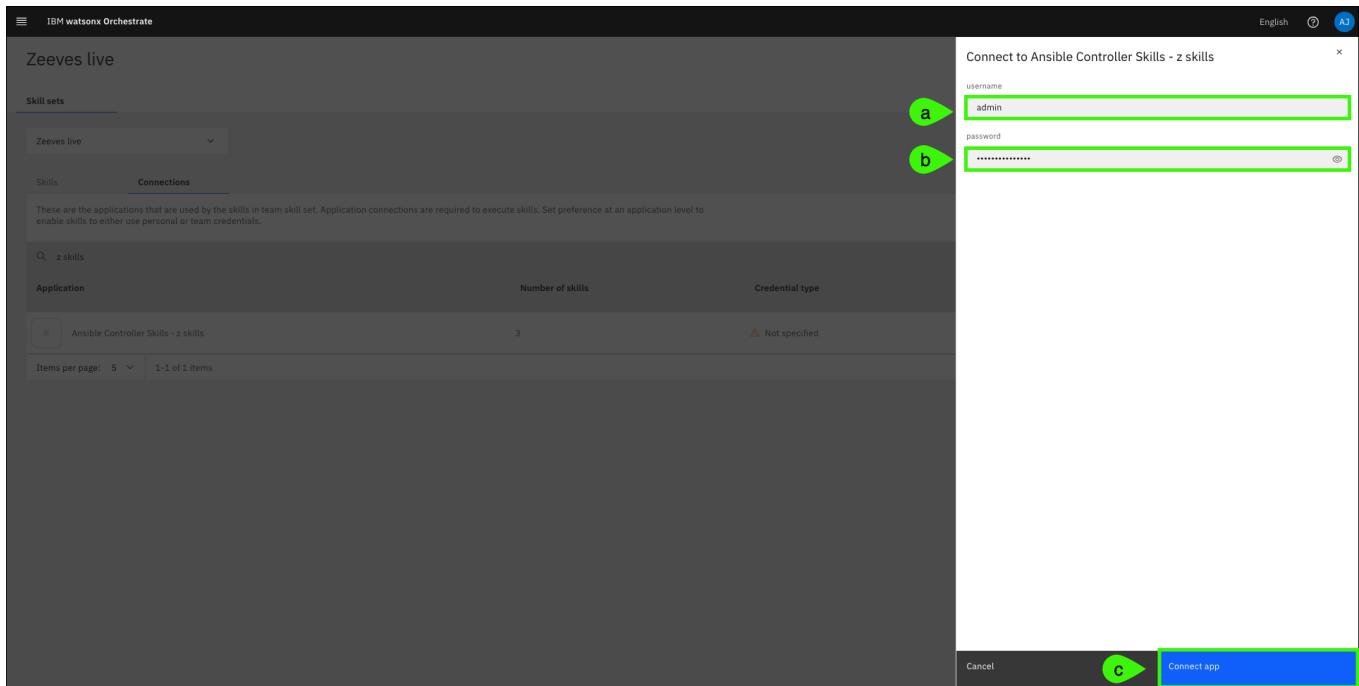

Team credentials
The admin sets the credentials each team member uses to connect to this app and use its skills.

You selected Team credentials for the credential type. Click Connect app to provide the credentials your team will use and to connect to the app.

Connect app

Items per page: 5 1-1 of 1 items

7. Enter the **username (a)** and **password (b)** using the username (admin) and password for your IBM Technology Zone (ITZ) watsonx Assistant for Z Pilot - AAP & z/OS reservation, and then click **Connect app (c)**.

Learn more about publishing your assistant and creating live environments [here](#).

Deploy the assistant

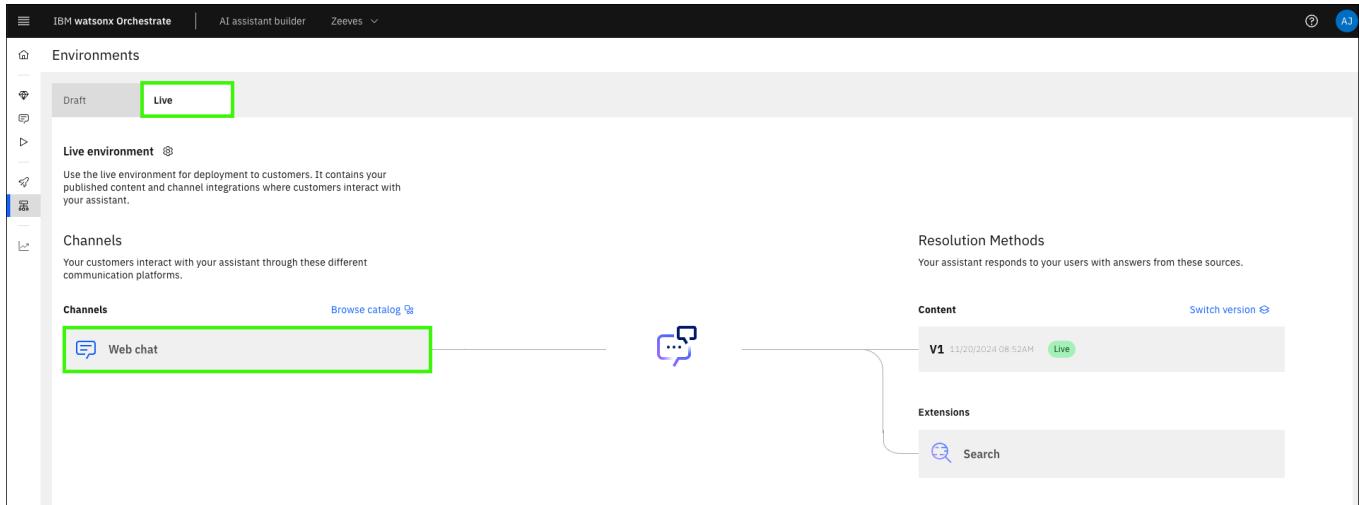

After configuring your assistant's settings and publishing, the final step is to deploy your assistant, which can be done across various channels depending on the use case.

Several options exist for deploying your assistant through channels and integrations to satisfy the use cases that you might encounter. Learn more about all the deployment options [here](#).

For this lab, deploy the assistant by using the web chat integration. The web chat integration provides an assistant interface that can integrate with a website. Learn more about the web chat integration [here](#).

1. Open the **Environments** page in the [AI assistant builder](#).

2. Click **Web chat** for the **Live** environment.

3. Click the **Embed** tab.

The screenshot shows the 'Web chat' configuration page. The 'Embed' tab is selected and highlighted with a green border. On the right side, there is a preview window titled 'Zeeves 1.0' showing a dark-themed chat interface with a blue owl icon and sample messages. The configuration options include:

- Assistant's name as known by customers:** Zeeves 1.0
- Intended purpose:** Standard: For virtual agents and customer support experiences.
- Choose a theme:** Light (selected) or Dark
- Primary color:** #FFFFFF
- Secondary color:** #3D3D3D
- Chat header:** #0354E9
- Accent color:** #0070C0
- Size:** Width: 380px, Height: 640px
- IBM Watermark:** Enabled (On)

4. Copy and record the `integrationID`, `region`, and `serviceInstanceId` values.

The screenshot shows the 'Web chat' configuration page. The 'Embed' tab is selected and highlighted with a green border. A code snippet for embedding the chat is displayed in a text area:

```
<script>
  window.watsonAssistantChatOptions = {
    integrationID: '8b4ad299-e6b9-434c-8c8c-2754d9272fe5', // The ID of this integration.
    region: 'wco-us-south', // The region your integration is hosted in.
    serviceInstanceId: '7c163381-8dcf-476b-bdf2-319f531087ba', // The ID of your service instance.
    onLoad: async (instance) => { await instance.render(); }
  };
  setTimeout(function() {
    const t=document.createElement('script');
    t.src='https://web-chat.global.assistant.watson.appdomain.cloud/versions/' + (window.watsonAssistantChatOptions.version || 'latest') + '/index.js';
    document.head.appendChild(t);
  });
</script>
```

5. In a text editor, create a file that is named `Watson Assistant Chat.html` and paste the following text in the file.

File name:

`Watson Assistant Chat.html`

File contents:

```
<html lang="en">
<head>
<title>Watson Assistant Chat</title>
<meta name="viewport" content="width=device-width, initial-scale=1">

<style>
.WebChatContainer {
  position: absolute;
  left: 0;
  right: 0;
  top: 0;
  bottom: 0;
}
</style>
</head>
<body>

<div class="WebChatContainer"/>

<script>
const element = document.querySelector('.WebChatContainer');

window.watsonAssistantChatOptions = {
  integrationID: "<YOUR INTEGRATION ID>", // The ID of this integration.
  region: "<YOUR REGION>", // The region your integration is hosted in.
  serviceInstanceId: "<YOUR SERVICE INSTANCE ID>", // The ID of your service instance.
  element,

  openChatByDefault: true,
  hideCloseButton: true,

  layout: {
    showFrame: false,
    hasContentMaxWidth: true,
  },
  onLoad: async (instance) => {
    window.WACInstance = instance;
    await instance.render();
  }
};

setTimeout(function() {
  const t = document.createElement('script');
  t.src = 'https://web-chat.global.assistant.test.watson.appdomain.cloud/versions/' +
  (window.watsonAssistantChatOptions.clientVersion || 'latest') +
  '/WatsonAssistantChatEntry.js';
  document.head.appendChild(t);
});
</script>

</body>
</html>
```

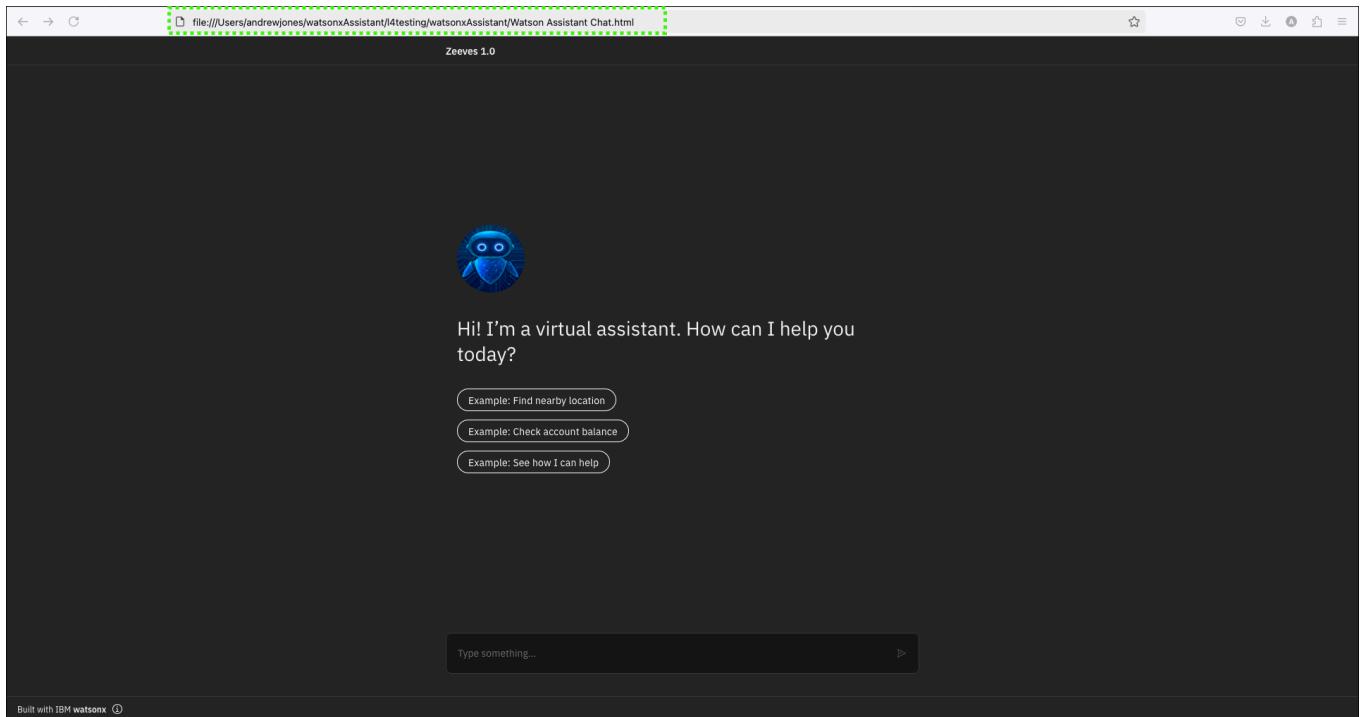

Before modification:

```
Watson Assistant Chat.html ×

48
49 </script>
50
51 </div>
52
53 </body>
54 </html>
```

6. Open the `Watson Assistant Chat.html` file in a web browser.

Your assistant is now live. Explore some of the earlier prompts to verify that the assistant is accessing the ingested documents and your skills and skill flows are active.

⚠ Wait 5-10 seconds before clicking apply on skill actions.

Prompts to try:

What is z/OS continuous delivery?

Get z/OS facts

Show me z/OS facts

Gather and display z/OS facts

Use cases

Use case: Retrieve IPL information

Next, explore a use case to improve productivity for early-tenure system programmers (SysProg) who are preparing for an upcoming initial program load (IPL) for a logical partition (LPAR).

To prepare for the IPL, the SysProgs need to familiarize themselves with the process. Rather than spending time reading through the wide array of documentation available online, they would like to use watsonx Assistant for Z. The content-grounded capabilities that are provided by watsonx Assistant for Z return accurate responses to their questions quickly and uses automations to perform actions.

As part of the pilot, they already explored prompting the assistant with questions. In one example prompt, they asked the assistant is “*What information is needed to perform an IPL on a z/OS LPAR?*” In reading the response, the SysProg learns they need information about their system in preparation for the IPL. For example, the IPL Volume and the IPL LOAD PARM.

For this use case, show how a simple automation for retrieving this type of information can be infused in a natural conversation with watsonx Assistant for Z. You use pre-packaged skills to automate various tasks on z/OS. The pre-packaged skills are provided as an OpenAPI JSON file. Learn more about OpenAPI [here](#). The file includes skill definitions that can be uploaded to the Skill Studio within watsonx Orchestrate to import the pre-packaged skills. First, the file must first be customized for your z/OS server.

The list of pre-packaged skills available include:

- Authorized program list
- z/OS IPL Information
- Display zOS parmlib datasets
- Unix System services options
- Display zOS subsystems
- List spool files
- Retrieve dataset content
- Retrieve spool file content
- Retrieve z/OS Management facility (z/OSMF) job status

A great value of watsonx Orchestrate is the ability to build skills that anyone can use. You can build your own custom skills by importing an OpenAPI file into watsonx Orchestrate as a JSON or YAML file. For more information on building skills by importing OpenAPI files, refer to the documentation [here](#).

Watsonx Orchestrate also makes it possible to build, edit, and generate OpenAPI specifications by using the OpenAPI builder. With the OpenAPI Builder, you can use the AI function to simplify the process of generating these specifications. For more information on using the OpenAPI Builder, refer to the documentation [here](#).

For this use case, you are importing the skill for retrieving a z/OS server’s IPL information. The next steps walk you through the process of downloading that OpenAPI JSON file and customizing it for your environment.

Download and customize the watsonx Assistant for Z OpenAP JSON file

1. Download the watsonx Assistant for Z OpenAP JSON file.

wxa4z-skillpak-prepackaged-skills.json.zip

- ## 2. Extract the file.

3. In a text editor, open the `wxa4z-skillpak-prepackaged-skills.json`, modify the server's url field as described, and save the file.

File name:

wxa4z-skillpak-prepackaged-skills.json

Substitute your Wazi as a Service (WaaS) instance URL for the string <your z/OSMV URL>. Your WaaS URL is based on your ITZ AAP URL that can be obtained from your watsonx Assistant for Z Pilot - AAP & z/OS ITZ reservation.

The AAP URL is similar to:

<https://itzvsi-aap-ppxbcno.techzone.ibm.com>

Change the `aap` string to `zos` and append `:10443` to the URL value. **Record this value for later use!** Your new URL is similar to:

<https://itzvsi-zis-ppxbcn0.techzone.ibm.com:10443>

Before:

{ wxa4z-skillpak-prepackaged-skills.json }

Users > andrewjones > watsonxAssistant > finaltest > watsonxAssistant > {} wxa4z-skillpak-prepackaged-skills.json > ...

```

26     "/zosmf/restconsoles/consoles/{consoleName}?authProgList": {

```

In watsonx Orchestrate, each app is associated with a single URL.

If you have not imported previous skills into an app called `z/OS operations`, the default values in the `info` section are fine. If you already have an app named "z/OS operations", modify the `info` section to meet your needs.

For more information on modifying the OpenAPI JSON file, see the instructions [here](#).

Set the RACF passphrase for z/OSMF authentication

For your skills to run successfully on your WaaS instance, you need to ensure that you can authenticate to it from watsonx Orchestrate. To achieve successful authentication, setup a new RACF Passphrase for the `IBMUSER` ID that is a pre-defined user ID on the WaaS server. The following steps take you through the steps of setting a new passphrase for your user and verifying access.

1. Open and log in to the Ansible Automation Platform (AAP) web console.

Don't remember how?

Refer to the first 5 steps in [Explore Ansible Automation Platform](#).

2. Click **Templates** under the **Resources** section.

Name	Type	Organization	Last Ran	Actions
z/OS Certs - Add CA Cert	Job Template	Default	1/17/2025, 5:17:58 AM	
z/OS Certs - Create Cert	Job Template	Default		
z/OS Certs - Create Keyring	Job Template	Default		
z/OS Certs - Delete Cert	Job Template	Default		
z/OS Certs - Delete Keyring	Job Template	Default		

3. Click the launch icon () for the **z/OS TSO Command(s)** template.

Name	Type	Organization	Last Ran	Actions
z/OS TSO Command(s)	Job Template	Default		

4. Replace the default command with the text that follows and substituting a password of your choosing for the string **YOUR PASSWORD PHRASE** and then click **Next**.

```
ALTUSER IBMUSER PHRASE('YOUR PASSWORD PHRASE') NOEXPIRE RESUME
```

Avoid typographical errors later... keep the password simple.

If you type the command yourself, be sure to include the single quotes before and after the password. **Record the password as it will be needed later.** We will refer to this as your **WaaS password**."

Launch | z/OS TSO Command(s)

7. Verify that you can log in to z/OSMF in a new browser tab.

Use the WaaZ URL created earlier and append `/zosmf` to the string. The URL is similar to: <https://itzvsi-zos-pwgabob.techzone.ibm.com:10443/zosmf>.

The screenshot shows a web browser window with the URL <https://itzvsi-zos-pwgabob.techzone.ibm.com:10443/zosmf> highlighted. A warning message box is displayed in the center of the screen:

This Connection Is Not Private

This website may be impersonating "itzvsi-zos-pwgabob.techzone.ibm.com" to steal your personal or financial information. You should close this page.

[Show Details](#) [Close Page](#)

Accept any **connection not private** messages to open the page.

8. Enter (a) `IBMUSER` for the **z/OS USER ID**, (b) the password you specified in step 4 for the **z/OS PASSWORD**, and then (c) click **LOG IN**.

7. Select the **z/OS IPL Information** skill and then click **Add**.

Note: Only the **z/OS IPL Information** skill is required for this use case, but you can add as many skills as you like for testing purposes.

The screenshot shows the 'Skill studio' interface for adding skills. At the top, there are navigation links for 'Skills and apps' and 'Add skills'. On the right, there are language and help buttons. The main area is titled 'Add skills' with a sub-instruction: 'Choose how you want to add skills and then select the skills you want to refer to from that source.' Below this, there are two tabs: 'Choose the source' (selected) and 'Select the skills'. Under 'Choose skills', it says 'you can choose which skill to add here'. A table lists nine skills, with 'z/OS IPL Information' checked and highlighted with a green border. The table columns are 'Skill', 'Description', and 'Status'. The status for all skills is 'Ready to add'. At the bottom, there are pagination controls for 'Items per page' (5), 'Page 1 of 2 pages', and navigation arrows. In the bottom right corner, there are 'Cancel' and 'Add' buttons, with 'Add' being highlighted by a green box.

Test the skill

1. Open **Chat** in watsonx Orchestrate.

The screenshot shows the IBM Watsonx Orchestrate interface. The left sidebar has a dark theme with white text and icons. The 'Chat' option is highlighted with a green border. Other options like 'Skill sets' and 'Skill catalog' are also visible. The main area is titled 'Skill studio' and contains a brief description: 'Build skill flows and connectors to build and manage skill flows and connectors.' A 'Create' button is at the top right. Below it is a 'Configure prebuilt skills' button. A table lists a single skill entry:

Description	Configuration status
z/OS IPL Information	✓ Configured

2. Click **Add skills from the catalog**.

The screenshot shows the 'Chat' interface. At the top, it says 'Personal skills' and has language and help buttons. Below is a message from Watson: 'Hi. I'm Watson. Check out the skills in the catalog to see how I can help you.' A text input field says 'Tell me what you want to do'. In the bottom left, there's a button with a blue border and text: 'Add skills from the catalog'. To its right is a card for 'Ansible Controller Skills - z skills'. The card has a small icon, a '2 skills' badge, and a question mark icon in the bottom right corner.

3. In the search apps field, enter the name of the application. Unless you modified the `info` section of the JSON file, the default name is **z/OS operations**.

Skill catalog
Skills are grouped by app. Select an app to see all the skills that use that app.

5. Click **Add skill +** for the **z/OS IPL Information** skill.

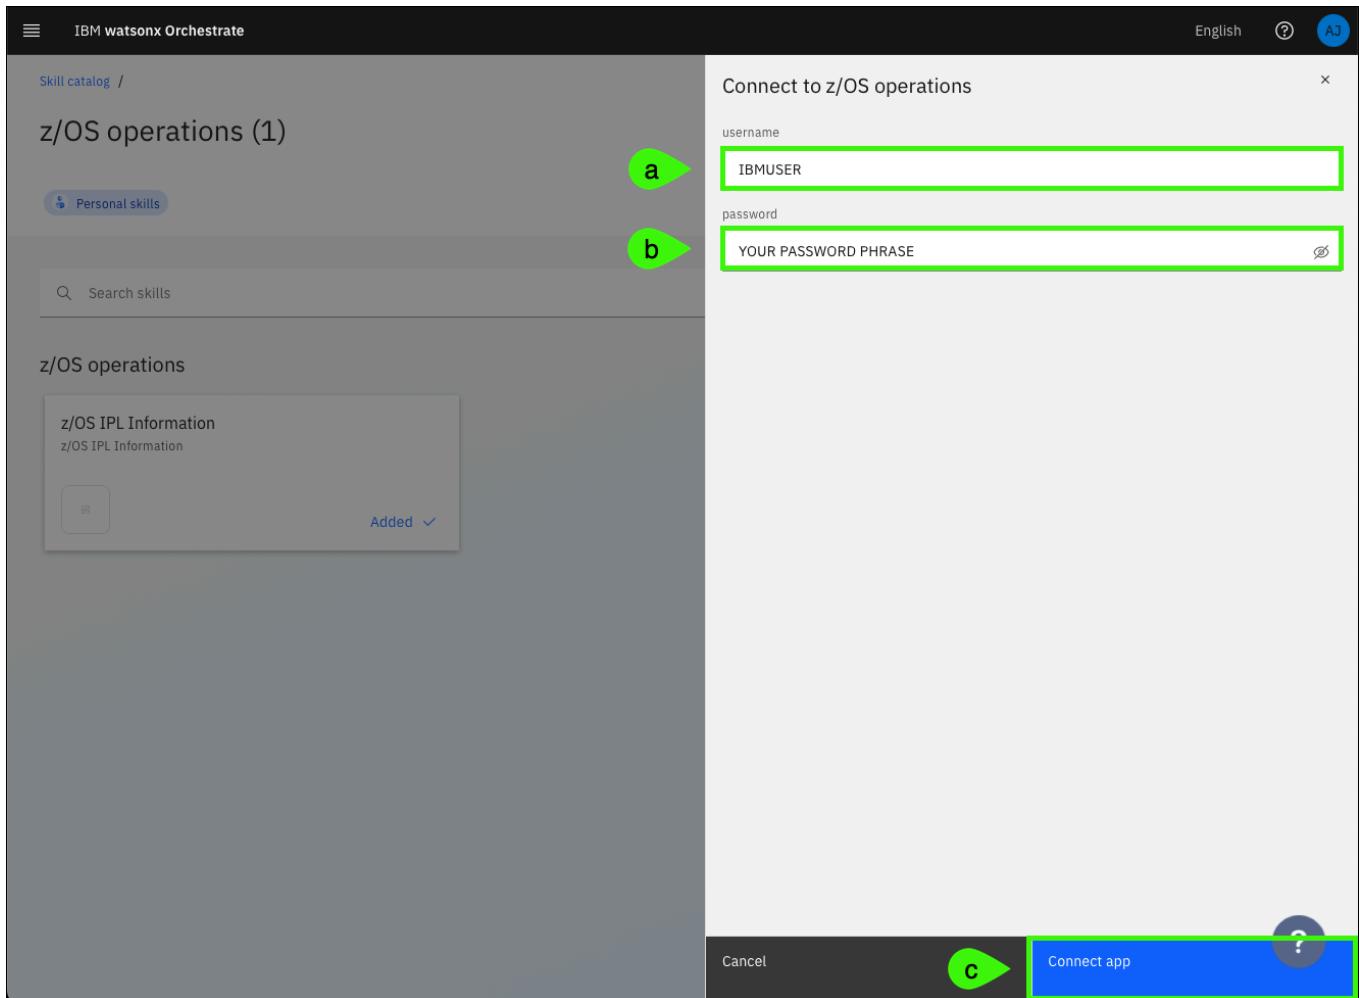

The screenshot shows the IBM Watsonx Orchestrate interface. At the top, there's a navigation bar with 'Skill catalog /' and 'z/OS operations (1)'. On the right side of the header are 'English', a help icon, and a profile icon. Below the header is a search bar with 'Search skills' placeholder text. Underneath the search bar, the title 'z/OS operations' is followed by a list item 'z/OS IPL Information'. To the right of this list item is a small square icon and a button labeled 'Add skill +', which is highlighted with a green rectangular box. The background of the main content area is light blue.

6. Repeat step 5 for any additional skills you added to the app.

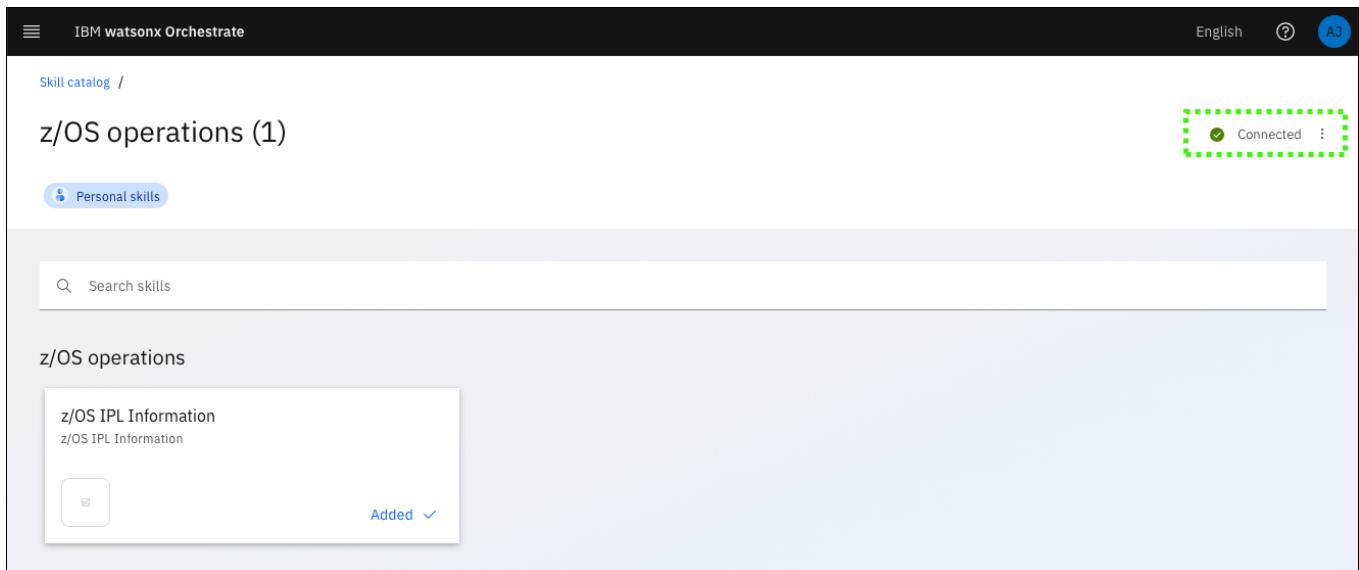

7. Click **Connect app**.

This screenshot is similar to the previous one, showing the 'z/OS operations' skill list. However, the 'z/OS IPL Information' skill now has a status indicator 'Added ✓' next to it, indicating it has been successfully added. The 'Connect app' button at the top right is also highlighted with a green rectangular box. The overall layout and colors are consistent with the first screenshot.

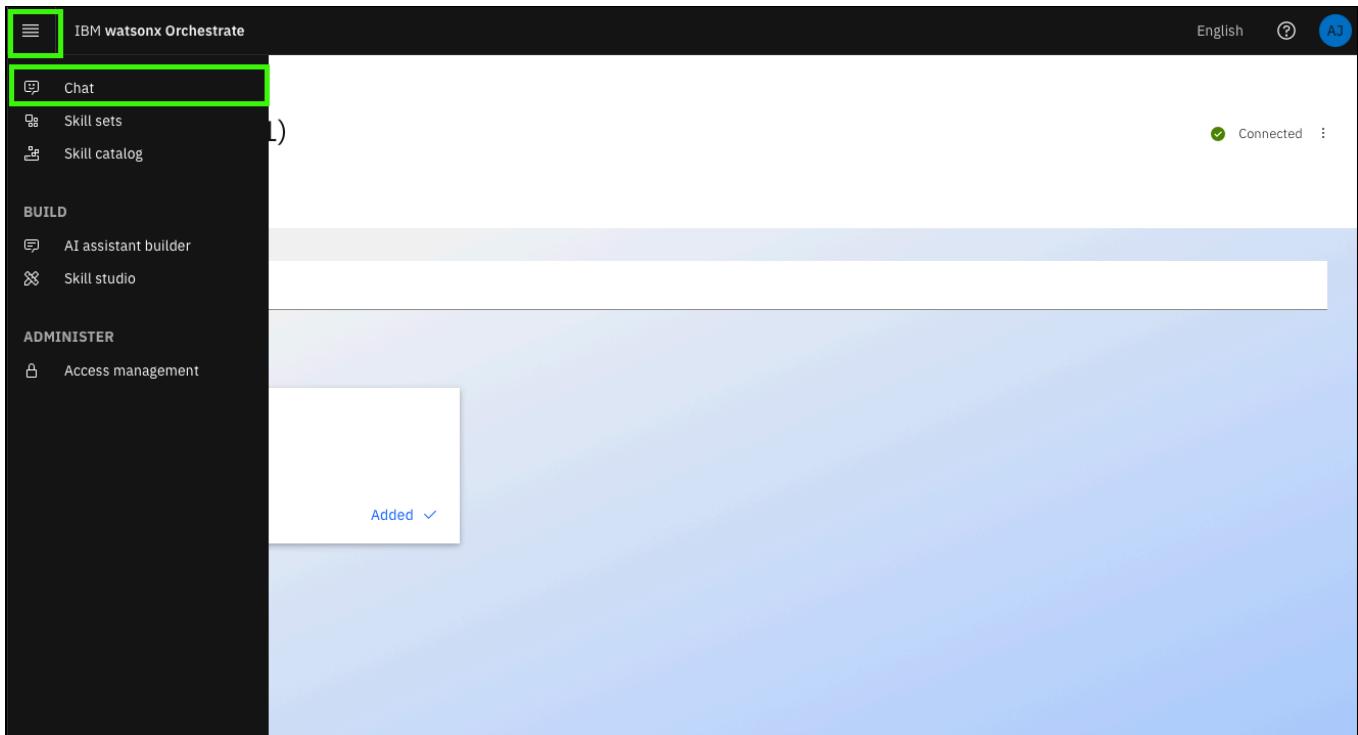

8. Enter (a) **IBMUSER** in the **username** field, (b) your **WaaS password** created earlier in the **password** field, and then (c) click **Connect app**.

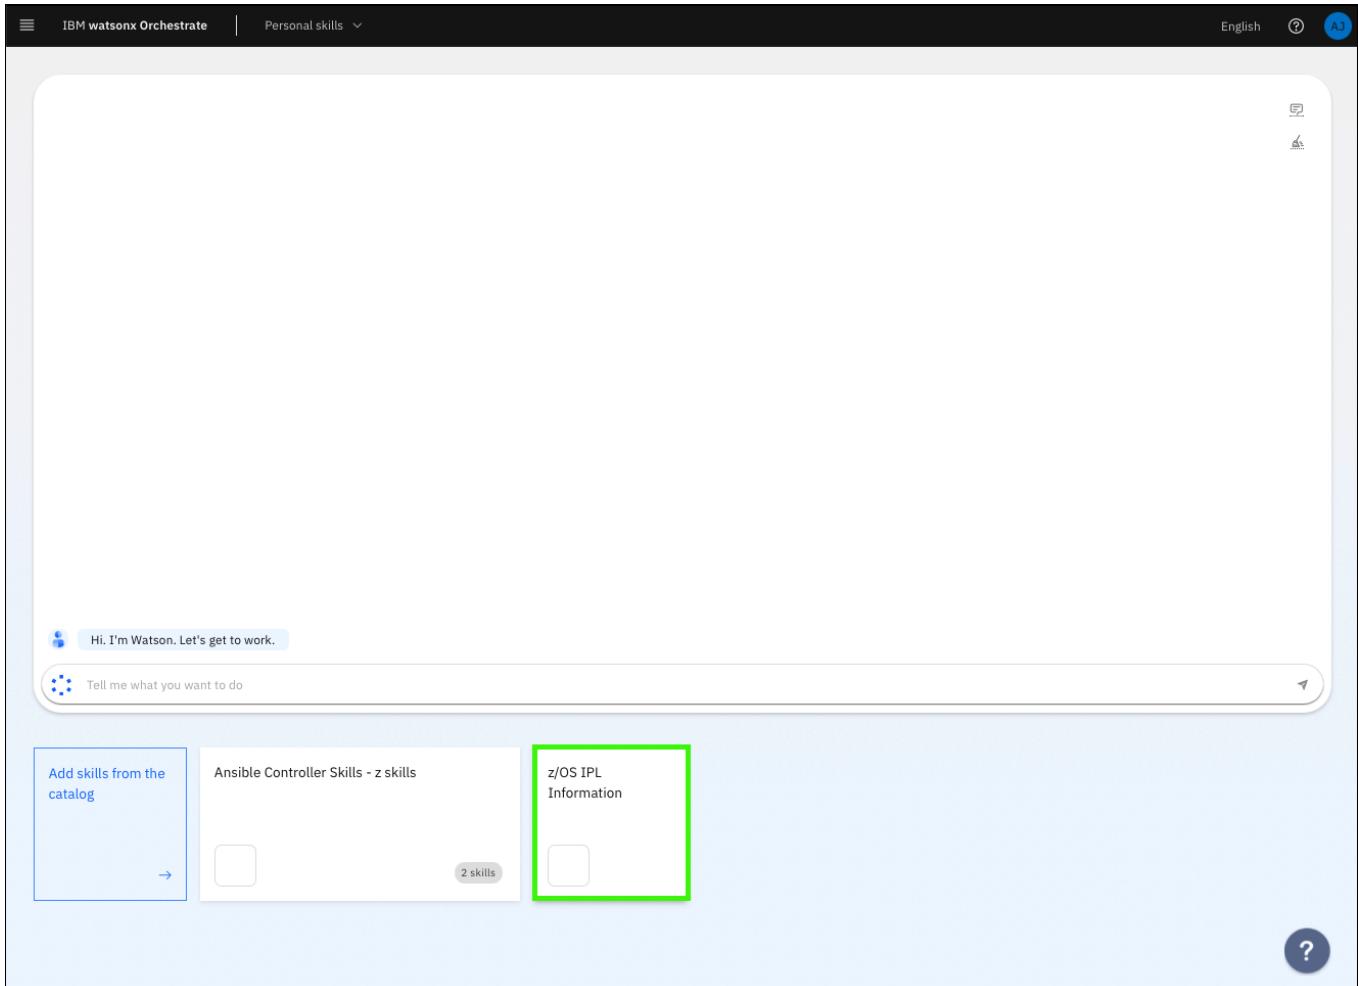

9. Verify that the skill is connected.

10. Open **Chat** in watsonx Orchestrate.

11. Click the **z/OS IPL Information** tile.

The name of the tile may be different.

If you added multiple skills to your app, the tile name may be **z/OS operations** and the number of skills included will be shown.

12. Using the defaults in the form, click **Apply**.

Hi, I'm Watson. Let's get to work.

7. Enter (a) **IBMUSER** in the username field, (b) your **WaaS password** in the password field, and then (c) click **Connect app**.

Create an action for your assistant

Next, create a skill-based action that uses the **z/OS IPL Information**. Recall, with the **z/OS Gather Facts** skill flow that was created earlier, adding the skill as a skill-based action allows the skill to run based on user prompts to the assistant.

Skill-based actions also serve another purpose. After creating the skill-based action, you can then call that action from a custom-built action. This is accomplished through subactions. For this use case, create an action that triggers the **z/OS IPL Information** skill on z/OS to display the LPARs IPL information. That action is integrated into another custom-built action (as a subaction) to provide a customized user experience.

1. Open [AI assistant builder](#) in watsonx Orchestrate.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with sections like Chat, Skill sets, Skill catalog, BUILD (with AI assistant builder selected), and ADMINISTER (with Access management). The main area displays a table of skills:

	Number of skills	Credential type	Connected by	Action
	1	Team	andrew@jones-tx.com	⋮

At the bottom, it says "1 of 1 items" and has navigation controls: "1" with a dropdown, "of 1 page", and arrows.

2. Select Actions.

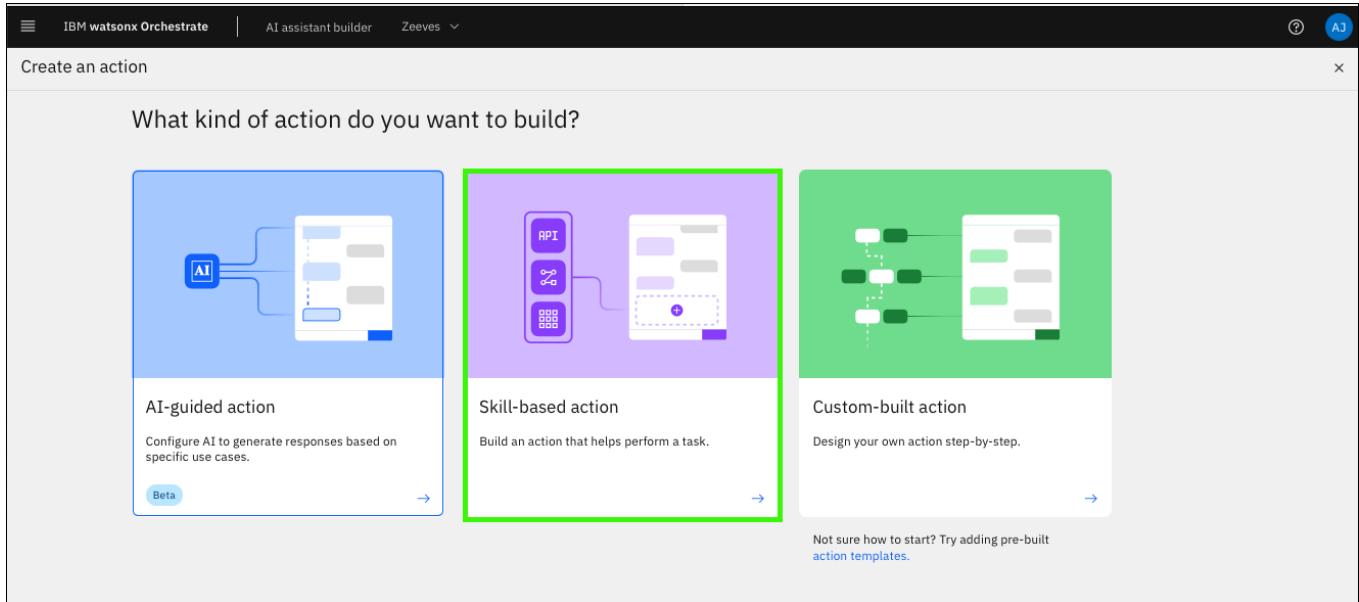

The screenshot shows the "Actions" section under "Generative AI". It includes a summary: "17, 2025 5:15:55 AM CST" and a message: "as new watsonx generative AI features! Learn more about intelligent information gathering." with a "Enable in settings" button. Below are several action cards:

- Build actions**: Enhance and improve your assistant's actions.
- Customize your greeting**: Welcome your users in a unique way that aligns with their behavior.
- Create a fallback plan**: Train your assistant to adapt to specific situations.
- Preview & debug**: Enable debug mode when you preview your assistant.
- Customize web chat**: Design how your assistant shows up in your live environment.
- Set up**: Select what want assis

3. Click New action +.

The screenshot shows the "Actions" list. It has filters for "Created by you" and "Variables". The table columns are: Name, Last edited, Examples count, Steps count, and Status. A row for "Zeeves-gather-facts-flow" is shown with status "Green". At the bottom right of the table is a green-bordered "New action +" button.

4. Click Skill-based action.

5. Click **z/OS IPL Information** and then click **Next**.

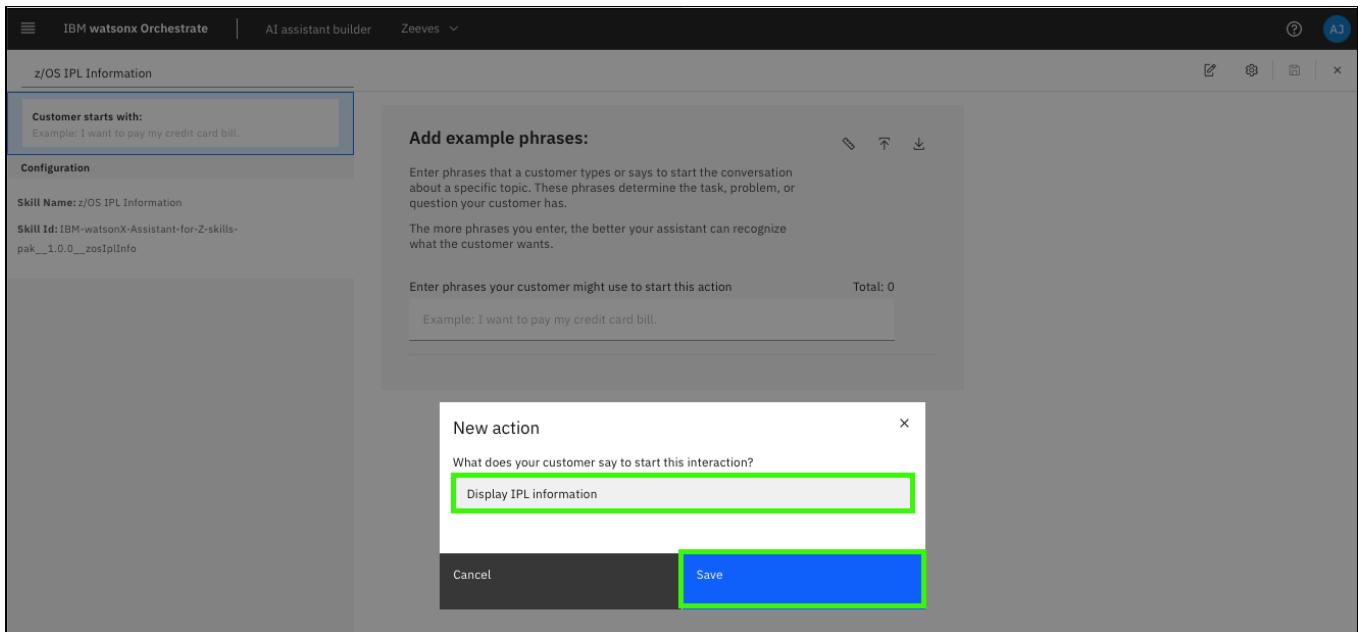

The screenshot shows the 'Build an action from a skill' interface. At the top, it says 'Select a skill' and 'Choose a conversational skill published as a foundation of your action.' A search bar contains the text 'z/OS IPL Information'. Below the search bar is a grid of skill cards:

z/OS IPL Information	Zeeves-gather-facts-flow	Retrieve job output	z/OS Ping
z/OS IPL Information	Run z/OS gather facts and retrieve the output.	z skills - Retrieve job output by job Id	z skills - This playbook pings the z/OS host to test connectivity.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main area is titled 'z/OS IPL Information'. On the left, there's a sidebar labeled 'Configuration' with sections for 'Skill Name' (set to 'z/OS IPL Information') and 'Skill Id' (set to 'IBM-watsonX-Assistant-for-Z-skills-pak__1.0.0__zosIplInfo'). The main content area has a heading 'Add example phrases:' with instructions: 'Enter phrases that a customer types or says to start the conversation about a specific topic. These phrases determine the task, problem, or question your customer has.' It also states 'The more phrases you enter, the better your assistant can recognize what the customer wants.' Below this, there's a text input field 'Enter a phrase' with the placeholder 'Enter a phrase' and a note 'Total: 1'. A single phrase, 'Display IPL information', is listed in the input field. To the right, a 'Preview' window shows a sample conversation: '9:02 AM' followed by 'Conversational skill called z/OS IPL Information recognized'. Below this, a form is shown with fields: 'z/OS IPL Information' (selected), 'consoleName *' (set to 'iserVS01'), 'cmd *' (set to 'd iplinfo'), and 'sol-key *' (set to 'JES'). The 'Apply' button at the bottom of the form is highlighted with a green border.

11. Verify the results.

Create a custom-built action

Custom-built actions allow you to define each step of a conversation with your assistant. You can define steps with or without conditions to control the user responses. You can include your skill-based actions as sub-actions. You can pass generated values between the subactions.

Recall the use case of an early-tenure SysProg who is preparing for an upcoming IPL on one of their LPARs. After going through documentation, the SysProg found that there is information that is needed about their LPAR before they can begin the IPL process. To gather that information, the SysProg might ask the assistant "How do you retrieve the information needed to IPL a z/OS LPAR? Provide a detailed response". A response the assistant might return is shown in the following image.

A custom-built action can help the SysProg to take the next steps that are required by adding next-step action suggestions and start skills to gather the needed information.

1. Click **New action +**.

The screenshot shows the 'Actions' section of the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with categories like 'All items', 'Variables', and 'Saved responses'. The main area lists actions under 'Created by you': 'z/OS IPL Information' (last edited 17 minutes ago) and 'Zeeves-gather-facts-flow' (last edited 2 days ago). The 'New action' button is highlighted with a green box.

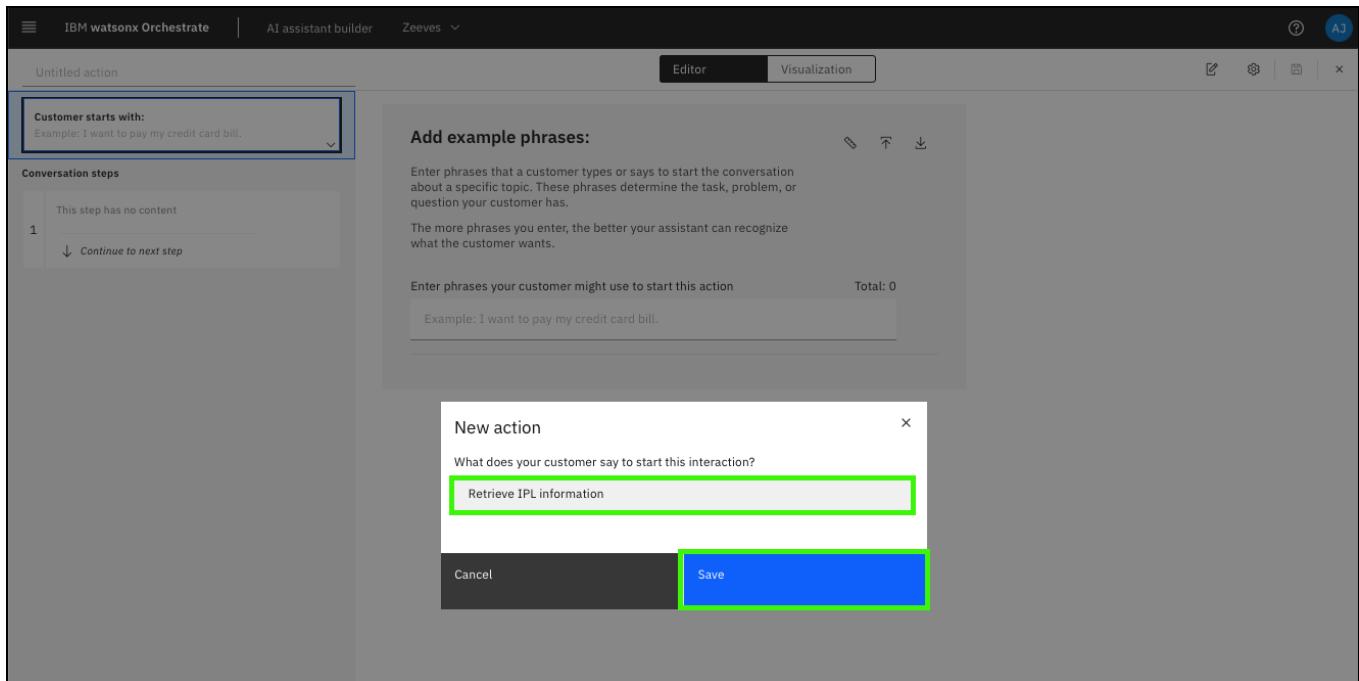

2. Click Custom-built action.

The screenshot shows the 'Create an action' dialog. It asks 'What kind of action do you want to build?' and lists three options: 'AI-guided action', 'Skill-based action', and 'Custom-built action'. The 'Custom-built action' option is highlighted with a green box. Below it, a note says 'Not sure how to start? Try adding pre-built action templates.'

3. Enter an example phrase (**Retrieve IPL information**) to prompt the assistant to start the custom-built action and click **Save**.

Prompt:

Retrieve IPL information

4. Review the form to create a custom-built action.

A custom-built action can consist of multiple steps with each step that is taken with or without conditions. Each step specifies the assistant's response and the next step to start.

For client demonstrations and pilots...

For client demonstrations and pilots, it is possible to add a custom search query such that when conversational search is executed in the 1st step, the query being used is hard-coded and isn't necessarily what the end-user inputted. This can be done by clicking on the Edit settings option under Search for the answer and specifying a custom search query that specifies the exact query to be used.

5. Click the **And then** drop-down list and select **Search for the answer**.

Customer starts with:
Retrieve IPL information

Conversation steps

Step 1

Is taken without conditions Set variable values

Assistant says

For example: Please select from the following options:

Define customer response

And then

Continue to next step
Re-ask previous step(s)
Go to a subaction
Use an extension
Search for the answer
Connect to agent
End the action

6. Click **Edit settings**.

Customer starts with:
Retrieve IPL information

Conversation steps

Step 1

Is taken without conditions Set variable values

Assistant says

For example: Please select from the following options:

Define customer response

And then

Custom query None (Customer's message will be the query)
Custom filter None (Optional)
Edit settings

7. Enter a **Custom search query** and click **Apply**.

Custom search query:

How do you retrieve the information needed to IPL a z/OS LPAR? Provide a detailed response

The screenshot shows the IBM Watsonx Orchestrator interface. In the top navigation bar, it says "IBM Watsonx Orchestrator" and "AI assistant builder". The main area is titled "Retrieve IPL information". On the left, there's a sidebar for "Conversation steps" with one step labeled "1 This step has no content". A search bar says "Q Search for the answer". At the top right, there are tabs for "Editor" and "Visualization". Below the tabs, a button says "Set variable values". A modal window titled "Search for the answer" is open. It has tabs for "Search configuration" (which is selected) and "After generation". Under "Search configuration", it says "Set how you want your search to perform before a response is generated." There is a "Custom search query (Optional)" field containing the text "How do you retrieve the information needed to IPL a z/OS LPAR? Provide a detailed response". Below this, there are two options: "Use default" (radio button selected) and "Set new filter". The "Set new filter" option has a placeholder "Example: enriched_text.entities.text.:\"Boston, MA\"". At the bottom of the modal are "Cancel" and "Apply" buttons, with "Apply" highlighted.

8. Click Next step +.

The new custom-built action only responds with a description of how to retrieve the IPL information. Now, infuse automation into the conversation and ask the user if they want to perform the action.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. In the top navigation bar, 'IBM Watsonx Orchestrate' is selected. Below it, 'AI assistant builder' and 'Zeeves' are shown. The main area is titled 'Retrieve IPL information'. On the left, under 'Conversation steps', there is one step labeled '1' with the placeholder 'This step has no content' and a search bar 'Search for the answer'. To the right, 'Step 1' is selected, with the condition 'Is taken without conditions'. The 'Assistant says' section contains a rich text editor with the placeholder 'For example: Please select from the following options:' and a dropdown menu 'Define customer response'. Below this, the 'And then' section includes a step labeled '2' with the same content as step 1. The 'Custom query' field contains the text 'How do you retrieve the information needed to IPL a z/OS LPAR? Provide a detailed response'. The 'Custom filter' field is set to 'None (Optional)'. A green button 'New step +' is visible at the bottom left, and a blue button 'Preview' with a question mark icon is at the bottom right.

9. In the **Assistant says** field, enter a response asking if the user wants to display the IPL information.

Assistant says:

Would you like to display your LPARs IPL information?

The screenshot shows the continuation of the AI assistant builder interface. The top navigation bar and title 'Retrieve IPL information' remain the same. Under 'Conversation steps', two steps are listed: '1' and '2'. Step 1 is identical to the previous screenshot. Step 2 has a green dashed border around its content area. The 'Assistant says' section for step 2 contains the text 'Would you like to display your LPARs IPL information?' highlighted with a green box. The 'And then' section for step 2 includes a step labeled '2' with the same text and a 'Continue to next step' button.

10. Click the **Define customer response** drop-down and select **Confirmation**.

Now, after providing a conversational search-based response to the original question, the assistant asks the user if they want to display the IPL information and prompts the user to select **Yes** or **No**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. In the top left, it says "IBM Watsonx Orchestrate" and "AI assistant builder Zeeves". The top right has a help icon and a user profile icon. Below the header, there are tabs for "Editor" and "Visualization", with "Editor" selected. A sidebar on the left titled "Conversation steps" shows two steps: Step 1 ("Customer starts with: Retrieve IPL information") and Step 2 ("This step has no content"). Step 2 is currently active. The main area shows "Step 2" with a status of "Is taken without conditions". There is a "Set variable values" button. Below this, the "Assistant says" section contains the text "Would you like to display your LPARs IPL information?". Underneath, a green-bordered box labeled "Define customer response" contains options for "System" (with "Confirmation" selected) and "Options" (with "Pay Bill" listed). The "Confirmation" option is highlighted with a blue border.

11. Click **Next step +**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main area is titled 'Retrieve IPL information' and shows 'Conversation steps'. Step 1 has no content and a search bar. Step 2 contains a message 'Would you like to display your LPARs IPL information?' with a 'Confirmation' button, and a link to 'Continue to next step'. The 'Assistant says' section shows the message with a green dashed border around the text area. Below it are 'Yes' and 'No' buttons, and links for 'View response' and 'Edit validation'. A 'Step 3' section is partially visible at the bottom. A 'New step +' button is at the bottom left, and a 'Preview' button with a question mark icon is at the bottom right.

12. Click the **Is taken** drop-down and select **with conditions**.

The screenshot shows the same interface after selecting 'with conditions' for Step 3. The 'Is taken' dropdown now shows 'without conditions' (highlighted in green) and 'with conditions' (selected and highlighted in green). The 'Assistant says' section now displays a message 'For example: What size do you want to order?'. The 'Step 3' section is partially visible at the bottom.

13. Review the **Conditions**.

Notice that the default condition is based on **Step 2** and the user clicking **Yes** when prompted.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and icons for help and settings. The main area is titled 'Retrieve IPL information'. On the left, the 'Conversation steps' pane shows three steps: Step 1 (This step has no content), Step 2 (Would you like to display your LPARs IPL information? with a 'Confirmation' button), and Step 3 (2 is Yes). Step 3 is currently selected. The right side of the screen displays 'Step 3' configuration. It shows 'Is taken' set to 'with conditions' and a condition group 'Conditions' with one condition: 'If All of this is true: 2. Would you like to d... is Yes'. Below this, there's a 'New condition group +' button. The 'Assistant says' section contains the placeholder text 'For example: What size do you want to order?' and a dropdown menu set to 'Define customer response'. At the bottom, an 'And then' section has a dropdown menu set to 'Continue to next step'.

14. Enter **Retrieving your system's IPL information...** in the **Assistant says** field.

Assistant says:

Retrieving your system's IPL information...

This screenshot shows the same interface as the previous one, but with the 'Assistant says' field updated. The placeholder text 'For example: What size do you want to order?' has been replaced by the user-entered text 'Retrieving your system's IPL information...'. A green rectangular box highlights this new text. The rest of the interface remains the same, including the conversation steps and the configuration for step 3.

15. Click the **And then** drop-down and select **Go to a subaction**.

The screenshot shows the IBM Watsonx Orchestrate interface. In the top navigation bar, it says "IBM watsonx Orchestrate" and "AI assistant builder". The main area is titled "Retrieve IPL information". On the left, there's a sidebar for "Conversation steps" with three steps: 1. "Search for the answer", 2. "Would you like to display your LPARs IPL information?", and 3. "Retrieving your system's IPL information...". Step 3 has a condition "2. Would you like to d... is Yes". Below this, there's a "Define customer response" section with a "And then" dropdown menu open. The menu items are: Continue to next step (highlighted with a green box), Continue to next step, Re-ask previous step(s), Go to a subaction (highlighted with a green box), Use an extension, Search for the answer, Connect to agent, and End the action. A "Preview" button is visible on the right.

16. Click (a) the **Go to** drop-down, (b) select your skill-based action (**z/OS IPL Information**), and then (c) click **Apply**.

This screenshot shows the same interface as above, but with a modal dialog box in the foreground. The dialog is titled "Go to a action". It has a dropdown menu labeled "Go to" with "z/OS IPL Information" selected (highlighted with a green box). There is also a checkbox "End this action after the b action is completed". At the bottom of the dialog are "Cancel" and "Apply" buttons, with "Apply" highlighted with a blue box. The background of the interface is dimmed.

17. Click **Save** (💾) and then click **x**.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with 'Customer starts with: Retrieve IPL information' and a 'Conversation steps' section. Step 1: 'This step has no content'. Step 2: 'Would you like to display your LPARS IPL information?' with a 'Confirmation' button. Step 3: 'Retrieving your system's IPL information...' with a link to 'z/OS IPL Information'. The main area is titled 'Step 3' and shows 'Is taken with conditions'. A condition is defined: 'If All of this is true: 2. Would you like to d... is Yes'. Below this, there's a 'New condition group +' button and an 'Assistant says' section with a rich text editor toolbar.

Test the custom-built action

You can now practice demonstrating the flow of this use case. Recall the steps that were taken and the scenario of the early-tenure SysProg being tasked with preparing for an upcoming IPL.

1. Click Preview.

The screenshot shows the 'Actions' menu in the sidebar, with 'Preview' highlighted. The main area displays a table of actions created by the user:

Name	Last edited	Examples count	Steps count	Status
z/OS IPL Information	an hour ago	0	3	Green checkmark
Zeeves-gather-facts-flow	2 days ago	1	0	Green checkmark
Retrieve IPL information	15 minutes ago	1	3	Green checkmark

2. Enter How do you retrieve the information needed to IPL a z/OS LPAR? in the assistant prompt.

Prompt:

How do you retrieve the information needed to IPL a z/OS LPAR?

Use the Change layout option to open a full page view of the assistant.

The screenshot shows the IBM Watsonx Assistant for Z interface. At the top, there are tabs for "IBM Watsonx Orchestrate", "AI assistant builder", and "Zeeves". On the right side of the header are icons for help, settings, and a refresh button. Below the header, a toolbar includes "Preview assistant", "Copy link to share", "Change layout" (which is highlighted with a green dotted border), "Change background", and "Customize web chat". The main area is titled "AssistantZeeves" and features a blue owl icon. A message from the assistant says, "Hi! I'm Zeeves. How can I help you today?". At the bottom, a search bar contains the question "How do you retrieve the information needed to IPL a z/OS LPAR?" followed by a green "▶" button.

3. Review the response.

By using the conversational search capability of Watsonx Assistant for Z, grounded on Z-domain knowledge in the Z RAG, the user is able to quickly find an answer to their question. The assistant returns a response that shows the exact operator command they might use, and the types of details it provides which is relevant for preparing for an upcoming IPL. For example, the system's release level, the LOAD LIB information used for the IPL, the IODF device, the IPL device, and other system information.

You are also able to improve their productivity by infusing automations into the natural conversation that will provide them exactly the information they need to accomplish their task.

How do you retrieve the information needed to IPL a z/OS LPAR?

To retrieve the necessary information for IPLing a z/OS LPAR, you would typically refer to the system's documentation or consult with the system administrators. However, generally, you'd need the following:

1. LPAR Name: The unique identifier for the Logical Partition.
2. IPL Parameters: These include the system configuration parameters, such as the load module library, parmlib, and the address space layout.
3. System Symbols: These are used to customize the IPL process according to specific requirements.
4. IPL Source: This could be a specific member in a PDS (Partitioned Data Set), or a dataset specified in the IPL JCL (Job Control Language).

The exact process might vary depending on the specific mainframe environment and its configuration. Always ensure to follow the established procedures and guidelines provided by your organization's IT department.

Note: The document provided does not contain specific details about retrieving information for IPLing a z/OS LPAR. The provided information is based on general mainframe practices.

Would you like to display your LPARs IPL information?

4. Click Yes.

5. Using the defaults in the form, click Apply.

The screenshot shows the IBM Watsonx Orchestrate interface with the AI assistant builder tab selected. The main area displays a card titled "AssistantZeeves" with the sub-section "Specified in the IPL JCL (Job Control Language)". It contains a note about the process varying by environment and configuration, and a note about accuracy of generated answers. A question asks if the user wants to display LPARs IPL information, with "Yes" and "No" buttons. Below this, a message from "You" at 10:37 AM says "Retrieving your system's IPL information...". A modal window titled "z/OS IPL Information" is open, showing fields for "consoleName" (set to "iservS01"), "cmd" (set to "d iplinfo"), and "sol-key" (set to "JES"). The "Apply" button is highlighted with a green border. The sidebar on the left includes Home, Generative AI, Actions, Evaluate, Preview (selected), Deploy, Publish, Environments, Improve, Analyze, Integrations, and Activity log.

6. Review the response to the custom-built action.

The output provides relevant pieces of information the early-tenure SysProg needs to prepare for an IPL on their z/OS LPAR. For example, when the system was last IPLed, the z/OS release they have running (2.5), the IPL volume (D25VS1), the IPL LOAD PARM (LOADK2) used during the last IPL, and other relevant details.

The screenshot shows the IBM Watsonx Assistant interface. At the top, there are tabs for "IBM Watsonx Orchestrate", "AI assistant builder", and "Zeeves". On the right, there are buttons for "Copy link to share", "Change layout", "Change background", and "Customize web chat". The main area is titled "Preview assistant" and contains a sub-section titled "AssistantZeeves". A green dashed box highlights a "cmd-response" block. Inside this box, the following text is displayed:

```

z/OS IPL Information
sol-key-timeout
sol-key-detected
cmd-response
IEE254I 12.40.03 IPLINFO DISPLAY 770
SYSTEM IPLED AT 06.48.48 ON 01/17/2025
RELEASE z/OS 02.05.00 LICENSE = z/OS
USED LOADK2 IN SYS0.IPLPARM ON ODE28
ARCHLVL = 2 MTLSHARE = N
VALIDATED BOOT: NO
IEASYM LIST = (00,K2)
IEASYS LIST = (00) (OP)
IODF DEVICE: ORIGINAL(ODE28) CURRENT(ODE28)
IPL DEVICE: ORIGINAL(ODE27) CURRENT(ODE27) VOLUME(D25VS1)
VM CPID = zHYPaaS
VM UUID = 3C9BD7F3-8A47-4A47-B62C-298DA45F40EB
VM NAME = k8s_75d16281c12c4681b91417749e322845_0727_3c9bd
8a47

cmd-response-key
C4443879

```

At the bottom of the main area, there is a timestamp "10:39 AM" and a text input field with placeholder text "Type something...".

The ability to infuse skills and automations into the conversation allows the user to issue the operator command on their system directly within the assistant itself. The assistant provides a single interface for retrieving details that are required for the IPL process to go smoothly and increases the user's efficiency.

Use case: SSL Certificate renewal on z/OS

Now, shift roles to that of a mainframe Security Administrator. Your client would like to understand how Watsonx Assistant for Z can help them to ensure their critical security certificates are up-to-date and reduce the risk of expired certificates disrupting their organization's services.

Secure Sockets Layer (SSL) certificates, often referred to as digital certificates, are used to establish an encrypted connection between communicating parties over a network. Certificate management is crucial for maintaining the security of a company's z/OS environment. It has been a while since the Security Administrator performed the tasks to manage and renew a certificate, but recalls there being many steps required on z/OS and various RACF commands that need run to renew a certificate. Rather than going to their senior Security Administrator for assistance, you can demonstrate how leveraging Watsonx Assistant for Z can help them automate the certificate renewal process by infusing Ansible automation into natural conversation, as well as providing step-by-step guidance on the processes to determine certificate expiration and renewing certificates.

In this scenario, you will leverage the Ansible automation templates provided with your AAP and WAZI z/OS environment to create assistant actions to guide the client through the process of identifying their SSL certificate's expiration dates, and automating the certificate renewal process for them. This will save them time and improve their productivity.

Create an initial Certificate Authority (CA) certificate to sign future SITE certificates

For this use case, a Certificate Authority (CA) certificate is needed to sign new SITE certificates.

1. Open and log into the Ansible Automation Platform (AAP) web console.

Don't remember how?

Refer to the first 5 steps in [Explore Ansible Automation Platform](#).

2. Click **Templates** under the **Resources** section.

Name	Status	Type	Start Time	Finish Time	Actions
15 - Cleanup Job Details	Successful	Management Job	1/19/2025, 5:02:46 AM	1/19/2025, 5:02:48 AM	
14 - z/OS Certs - Add CA Cert	Successful	Playbook Run	1/17/2025, 10:08:07 AM	1/17/2025, 10:09:29 AM	
13 - z/OS TSO Command(s)	Successful	Playbook Run	1/17/2025, 7:41:26 AM	1/17/2025, 7:41:35 AM	

3. Click the **launch** icon () for the **z/OS Certs - Create Cert** template.

Name	Type	Organization	Last Ran	Actions
z/OS Certs - Add CA Cert	Job Template	Default	1/17/2025, 10:09:29 AM	
z/OS Certs - Create Cert	Job Template	Default		
z/OS Certs - Create Keyring	Job Template	Default		

4. On the **Survey** screen, modify the **Certificate Label** and **Type** fields with the values that follow and then click **Next**.

a: Certificate Label

TESTCA

b: Type

CERTAUTH

Leave the default values for all other fields.

The screenshot shows the Red Hat Ansible Automation Platform interface. A modal window titled "Launch | z/OS Certs - Create Cert" is open. The window states: "This playbook creates a SITE, USER or CERTAUTH certificate. Signed by local CA or self-signed." The "Survey" tab is selected. The form fields are as follows:

- Owner ID**: IBMUSER
- Certificate Label**: TESTCA
- Type**: CERTAUTH
- Sign With**: Self
- Sign Label**: (empty)
- Organizational Unit**: ANSIBLE CORE

At the bottom of the modal are three buttons: "Next" (highlighted in green), "Back", and "Cancel".

5. Click **Launch**.

Launch | z/OS Certs - Create Cert

This playbook creates a SITE, USER or CERTAUTH certificate. Signed by local CA or self-signed.

	Name	Description	Type	Job Template
1 Survey	z/OS Certs - Create Cert	This playbook creates a SITE, USER or CERTAUTH certificate. Signed by local CA or self-signed.		
2 Preview				
	Timeout	0 min 0 sec	Job Type	Run

8. Click JSON.

The screenshot shows the Red Hat Ansible Automation Platform web interface. The left sidebar has sections for Views (Dashboard, Jobs, Schedules, Activity Stream, Workflow Approvals), Resources (Templates, Credentials, Projects, Inventories, Hosts), and Access (Organizations, Users, Teams). The main area shows a job titled "16 - z/OS Certs - Create Cert" with a status of "Successful". A modal window titled "Host Details" is open for host "zos_host". The "JSON" tab is selected. A tooltip provides instructions for creating SITE cert and keyring. The host details table shows the host name and task information.

Host	zos_host	Status	Module
Task	Generate new certificate.	Changed	ibm.ibm_zos_core.zos_tso_comm and

Check if SITE cert and keyring already exist. If not, create them and then run health check via TSO and operator commands.

9. Review the RACDCERT command that was run to generate the certificate and then click x to close the window.

The screenshot shows the Red Hat Ansible Automation Platform interface. The left sidebar has sections like Views, Dashboard, Jobs, Schedules, Activity Stream, Workflow Approvals, Host Metrics, Subscription Usage, Resources, Templates, Credentials, Projects, Inventories, Hosts, Access, Organizations, Users, and Teams. The 'Jobs' section is currently selected. In the main area, under 'Jobs', it says 'Output' and shows a 'Host Details' panel. The 'Details' tab is selected, showing a JSON log of a task. The log includes a command: 'RACDCERT GENCERT CERTAUTH KEYUSAGE(CERTSIGN) SUBJECTSDN(CN('itzvsi-zos-pwg'))'. The output shows the command was successful ('changed': true, 'rc': 0). The timestamp for this output is 12:58:32. Below the log, it says '42 TASK [Stop TN3270 server.1] ****' and the timestamp is 12:58:41.

Create an expiring certificate

Now create an expiring certificate using the CA certificate you just created.

1. Return to the **Templates** tab and click the **launch** icon (🔗) for the **z/OS Certs - Create Cert** template.

The screenshot shows the Red Hat Ansible Automation Platform interface. The left sidebar has sections like Views, Dashboard, Jobs, Schedules, Activity Stream, Workflow Approvals, Host Metrics, Subscription Usage, Resources, **Templates** (which is selected and highlighted with a green box), Credentials, Projects, and Teams. The 'Templates' tab is selected in the main area. It lists templates: 'z/OS Certs - Add CA Cert' and 'z/OS Certs - Create Cert'. The 'z/OS Certs - Create Cert' template is highlighted with a green border. The 'Actions' column for this template shows a launch icon (highlighted with a green box), a pencil icon, and a clipboard icon. The table columns are Name, Type, Organization, Last Ran, and Actions.

2. On the **Survey** screen, modify the fields that follow with the values specified and then click **Next**.

a: Type

SITE

b: Sign with

CERTAUTH

c: Sign Label

TESTCA

d: Common Name

company . com

e: Expiration Date

Enter a date that occurs within the next 30 days. The date must be in the format YYYY-MM-DD.

Leave the default values for all other fields.

Unlike the first certificate you created which was *self-signed*, this certificate will be signed by the local certificate authority using the CA you created.

The image below does not highlight all the fields that need to be modified!

4. Verify the job was successful and inspect the output of the job.

The screenshot shows the Red Hat Ansible Automation Platform web interface. The left sidebar has sections for Views (Dashboard, Jobs, Schedules, Activity Stream, Workflow Approvals, Host Metrics, Subscription Usage), Resources (Templates, Credentials, Projects, Inventories, Hosts), Access (Organizations, Users, Teams), and Administration (Credential Types, Notifications). The main area shows a job titled "z/OS Certs - Create Cert". The "Output" tab is selected. The top bar shows "Jobs > 17 - z/OS Certs - Create Cert" and "Output". Below the tabs are metrics: Plays 1, Tasks 15, Hosts 1, Elapsed 00:00:21. The output pane shows "Events processing complete. Reload output". The log entries are:

```

15: SKIPPING: [zos_host]
16:

34: changed: [zos_host]
35:

```

Renew the expiring certificate

Now that you have a certificate and it is expiring within 30 days, it is time to renew the certificate.

1. Return to the **Templates** tab and click the **launch** icon (💡) for the **z/OS Certs - Search and Renew** template.

The screenshot shows the Red Hat Ansible Automation Platform web interface. The left sidebar has sections for Views (Dashboard, Jobs, Schedules, Activity Stream, Workflow Approvals, Host Metrics, Subscription Usage), Resources (Templates, Credentials, Projects, Inventories, Hosts), Access (Organizations, Users, Teams), and Administration (Credential Types, Notifications). The 'Templates' section is highlighted with a green box. In the main content area, a list of job templates is shown, with the 'z/OS Certs - Search and Renew' template highlighted by a green box. The table columns include Name, Type, Status, Last Run, and Actions (represented by icons).

Name	Type	Status	Last Run	Actions
z/OS Certs - Add CA Cert	Job Template	Default	1/17/2025, 10:09:29 AM	
z/OS Certs - Create Cert	Job Template	Default	1/19/2025, 1:16:45 PM	
z/OS Certs - Create Keyring	Job Template	Default		
z/OS Certs - Delete Cert	Job Template	Default		
z/OS Certs - Delete Keyring	Job Template	Default		
z/OS Certs - Health Checker Security	Job Template	Default	1/17/2025, 5:17:58 AM	
z/OS Certs - List Cert	Job Template	Default		
z/OS Certs - Search and Renew	Job Template	Default

3. Click **Launch**.

Launch | z/OS Certs - Search and Renew

This playbook searches for certificates with the details specified in the AAP survey and renews them.

Setting	Value
Name	z/OS Certs - Search and Renew
Description	This playbook searches for certificates with the details specified in the AAP survey and renews them.
Timeout	0 min 0 sec
Job Type	Run
Organization	Default
Inventory	AAP z/OS
Project	aap4zos
Execution Environment	aap4zos EE
Playbook	zos_concepts/certificate_management/search_and_renew.yml
Forks	0
Verbosity	0 (Normal)
Show Changes	Off
Job Slicing	1
Credential	SSH: z/OS Host SSH ...

Buttons: Launch (highlighted), Back, Cancel

4. Verify the job was **Successful** and review the output.

Note: you may need to click the **Reload Output** button after the job completes to view the full output.

Review the tasks that were run within the automation to renew the certificate. Some of the steps completed include:

- Run the RACF_CERTIFICATE_EXPIRATION z/OS Health Check
- Submit JCL to pull a report on the z/OS Health Check
- Search the output of the report for the given certificate label
- Print out the expiring certificate, if it is found. You should see: 'TESTSITE expiring – True'
- If the certificate is expiring, kick off a series of RACDCERT commands to do the following:
 - Backup the expiring certificate
 - Rekey the certificate and give it a new temporary label
 - Generate a CSR for the new certificate
 - Sign the new certificate with the local CA
 - Delete the old certificate
 - Relabel the new certificate to use the same label as before
 - Refresh the digital certificate list

The screenshot shows the Red Hat Ansible Automation Platform interface. On the left, there's a sidebar with sections like Views (Dashboard, Jobs, Schedules, Activity Stream, Workflow Approvals, Host Metrics, Subscription Usage), Resources (Templates, Credentials, Projects, Inventories, Hosts), Access (Organizations, Users, Teams), and Administration (Credential Types). The 'Jobs' section is currently selected.

The main area is titled 'Output' for a job named 'z/OS Certs - Search and Renew'. It shows a summary: Plays 1, Tasks 18, Hosts 1, Elapsed 00:00:32. A green box highlights the 'Successful' status. Below this, there's a 'Stdout' tab with a search bar and a message: 'Events processing complete' with a 'Reload output' button. The terminal output shows several lines of log data, starting with line 16 and ending with line 17, detailing RACF CERT EXPIRATION CHECK and various system logs.

Create another expiring certificate

Create one more expiring certificate to use with the your assistant and new skills you will create.

1. Return to the **Templates** tab and click the **launch** icon (💡) for the **z/OS Certs - Create Cert** template.

The screenshot shows the 'Templates' page in the Red Hat Ansible Automation Platform. The left sidebar has the 'Templates' tab selected, indicated by a green box. The main area displays a list of templates with columns for Name, Type, Organization, Last Ran, and Actions. Two templates are listed: 'z/OS Certs - Add CA Cert' (Job Template, Default, 1/17/2025, 10:09:29 AM) and 'z/OS Certs - Create Cert' (Job Template, Default, 1/19/2025, 1:16:45 PM). The 'z/OS Certs - Create Cert' template is highlighted with a green box, and its launch icon (💡) is also highlighted with a green box.

2. On the **Survey** screen, modify the fields that follow with the values specified and then click **Next**.

a: Certificate Label

DEMOCERT

b: Type

SITE

c: Sign with

CERTAUTH

d: Sign Label

TESTCA

e: Common Name

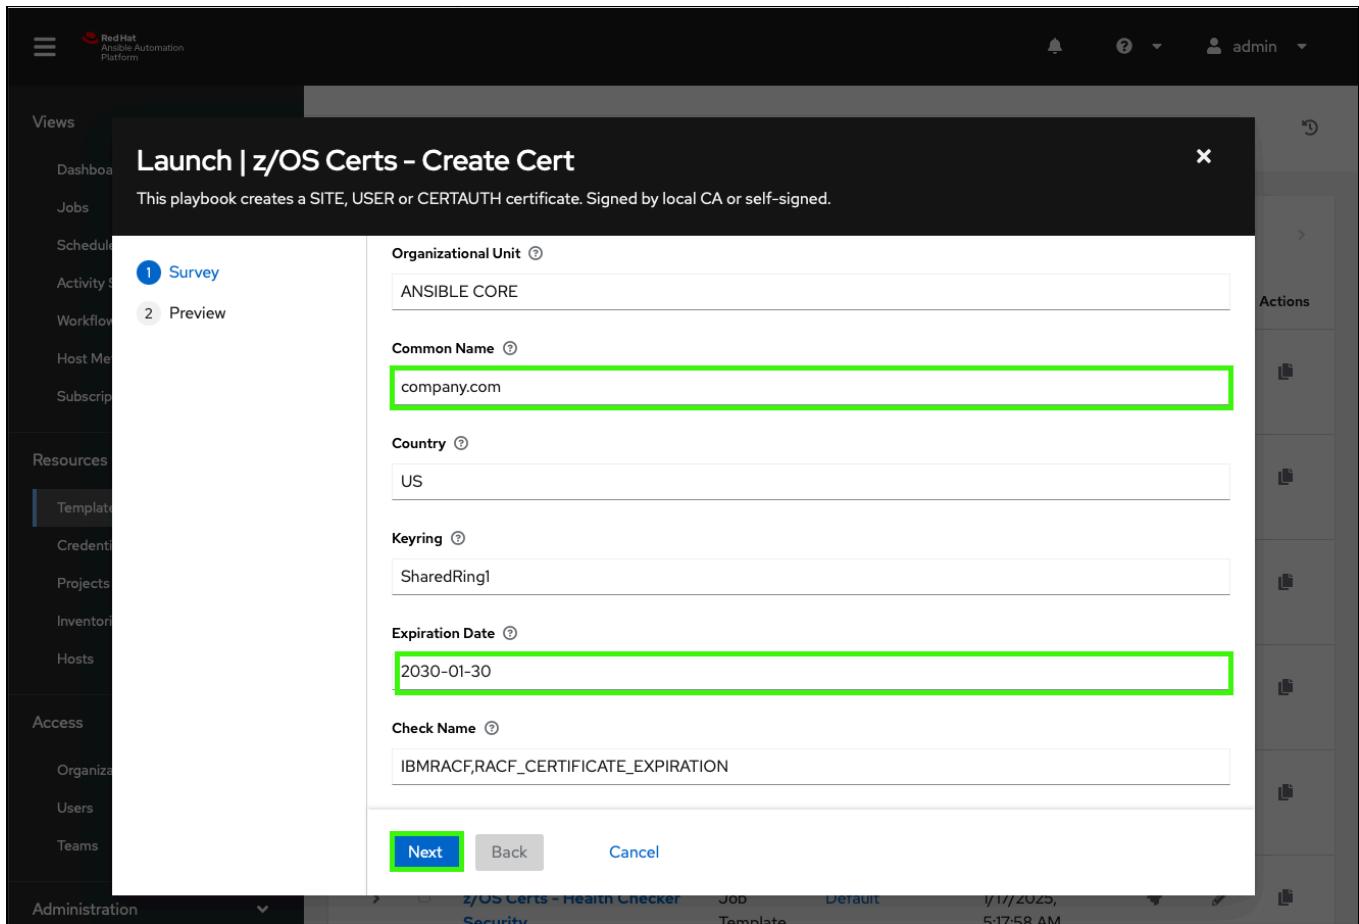

company.com

f: Expiration Date

Enter a date that falls within the next 30 days in the format YYYY-MM-DD.

The image below does not highlight all the fields that need to be modified!

3. Click **Launch**.

The screenshot shows the Red Hat Ansible Automation Platform interface. A modal dialog titled "Launch | z/OS Certs - Create Cert" is open. The dialog content includes:

- Execution Environment:** aap4zos EE
- Playbook:** zos_concepts/certificate_management/create_cert.yml
- Forks:** 0
- Verbosity:** 0 (Normal)
- Show Changes:** Off
- Job Slicing:** 1
- Credential:** SSH:z/OS Host SSH ...
- Created:** 1/17/2025, 5:17:37 AM by admin
- Last Modified:** 1/17/2025, 5:17:37 AM by admin

Below this, a section titled "Prompted Values" shows variables:

```
Variables YAML JSON  
1 owner_id_survey: IBMUSER  
2 cert_label_survey: DEMOCERT  
3 cert_type_survey: SITE  
4 sign_with_survey: CERTAUTH
```

At the bottom of the dialog are three buttons: "Launch" (highlighted with a green box), "Back", and "Cancel".

4. Verify the **DEMOCERT** was successfully created.

The screenshot shows the Red Hat Ansible Automation Platform interface. The left sidebar has sections for Views (Dashboard, Jobs, Schedules, Activity Stream, Workflow Approvals, Host Metrics, Subscription Usage), Resources (Templates, Credentials, Projects, Inventories, Hosts), Access (Organizations, Users, Teams), and Administration (Credential Types). The main area shows a job named "19 - z/OS Certs - Create Cert". The "Output" tab is selected, showing the job status as "Successful". Below the status, it says "Events processing complete" and "Reload output". The main content area displays the Ansible command logs:

```

15: Skipping: [zos_host]
16:
17: TASK [Check if certificate to be created already exists.] *****
18: ok: [zos_host]
19:
20: TASK [Debug command output.] *****
21: ok: [zos_host] => {
22:   "msg": "4"
23: }
24:
25: TASK [Debug.] *****
26: ok: [zos_host] => {
27:   "cert_not_found": true
28: }
29:
30: TASK [Generate new certificate.] *****
31: changed: [zos_host]
32:
33: TASK [List chain for new certificate.] *****
34: changed: [zos_host]
35:

```

Import the Ansible automations into watsonx Orchestrate

For this use case, configure the assistant to guide the user through the process of identifying their SSL certificate's expiration date and automate the certificate renewal process. To do so, import the needed AAP templates into watsonx Orchestrate as skills.

For this use case, the ansible templates you will import are:

- z/OS Certs – List Cert
- z/OS Certs – Search and Renew
- Retrieve job output (utility skill)

1. Open **Skill studio** in watsonx Orchestrate.

The screenshot shows the IBM Watsonx Orchestrate web interface. On the left, there's a sidebar with sections for Chat, Skill sets, Skill catalog, BUILD (with AI assistant builder and Skill studio), and ADMINISTER (Access management). The main area is titled "AssistantZeeves". At the top right, there are buttons for "Copy link to share", "Change layout", "Change background", and "Customize web chat".

2. Click **Create** and then click **Import API**.

The screenshot shows the "Skill studio" interface within Watsonx. The top navigation bar includes "Skill studio" and language settings. A "Create" dropdown menu is open, with "Import API" highlighted by a green box. Below the menu, there are tabs for Skills and Apps, a search bar, and a table listing skills.

Name	Step in the process	Status	Skill type	Author	Last edited
z/OS IPL Information	Ready to use	Published	Imported	andrew@jones-tx.com	January 17 2025
Zeeves-gather-facts-flow	Ready to use	Published	Skill flow	andrew@jones-tx.com	January 17 2025

3. Click the **z/OS Skills accelerator (Trial)** tile.

The screenshot shows the "Add skills" interface. It has tabs for "Choose the source" and "Select the skills". Under "Choose the source", there are options like "From an app", "From a file", and "OpenAPI builder (experimental)". A list of tiles includes "IBM Cloud Pak for Business Automation - On premises", "IBM Cloud Pak for Business Automation as a service", "z/OS Skills accelerator (Trial)" (which is highlighted with a green box), "UiPath", "IBM Robotic Process Automation (RPA)", "IBM Business Automation Workflow as a service", and "IBM Operational Decision Manager as a service".

4. Enter the following values in the **z/OS Skills accelerator** form and then click **Connect**.

Use the **URL**, **User Name**, and **Password** values recorded in the [Explore Ansible Automation Platform](#) section earlier.

a: Connection Type:

ansible

b: Application Name:

certs

c: Connection URL:

<Enter the URL for your AAP UI>

d: User Name:

<Enter the AAP User Name (for UI access)>

e: Password:

<Enter the AAP User Password>

f: Search Pattern:

*

The screenshot shows the 'Add skills' dialog in the Skill studio. On the left, there are two tabs: 'Choose the source' (selected) and 'Select the skills'. Below these are three buttons: 'From an app', 'From a file', and 'OpenAPI builder (experimental...)'. To the right, a list of skill sources is shown:

- IBM Cloud Pak for Business Automation - On premises**: which includes Automation Decision Services, Business Automation Workflow, and Operational Decision Manager on premises.
- IBM Cloud Pak for Business Automation as a service**: which includes Business Automation Workflow as a service and includes Operational Decision Manager as a service.
- z/OS Skills accelerator (Trial)**: Import your Ansible, JCL/REXX automation to watsonx Orchestrate (selected).
- IBM Robotic Process Automation (RPA)**
- IBM Business Automation Workflow as a service**
- IBM Operational Decision Manager as a service**

The 'z/OS Skills accelerator (Trial)' section is highlighted with a blue border. A green callout 'a' points to the 'Connection Type' field containing 'ansible'. A green callout 'b' points to the 'Application Name' field containing 'certs'. A green callout 'c' points to the 'Connection URL' field containing 'https://itzvsi-aap-pwgabob.techzone.ibm.com'. A green callout 'd' points to the 'User name' field containing 'admin'. A green callout 'e' points to the 'Password' field containing '*****'. A green callout 'f' points to the 'Search Pattern' field containing '*'. A green callout 'g' points to the 'Connect' button at the bottom right.

5. Expand the **Ansible Job Template Proj...** folder and then click **aap4zos**.

The screenshot shows the 'Select the skills' dialog. It displays a tree view of skill sets:

- Ansible Job Template Proj...** (selected)
 - Demo Project**
 - z_ansible_collections_sa...**
 - ansible_zos**
 - aap4zos** (selected)
- Ansible Utility Skills**

6. Select **Z/os certs** - list cert and **Z/os certs** - search and renew and then click **Save as draft**.

Scroll through the table of skills to find the required skills.

Add skills

Choose how you want to add skills and then select the skills you want to refer to from that source.

Select the skills

Select the skills you want to add to the skill set. Currently, 2 of 20 skills are selected.

Skill	Description	Status
Z/os certs - delete cert	Certs - this playbook deletes ...	Ready to add
<input checked="" type="checkbox"/> Z/os certs - list cert	Certs - this playbook displays...	Ready to add

9. Repeat steps 7 and 8 for the **z/OS Certs - Search and Renew** skill.

10. **Challenge:** You also need to add the **Retrieve job output** utility to your **certs** app just like you did when creating the **Gather Facts** skill flow. Repeat steps 2 - 8 to add the **Retrieve job output** utility skill to your **certs** app.

Verify all the skills are successfully imported and create the app connection.

1. Open **Skill catalog** in watsonx Orchestrate.

The screenshot shows the IBM Watsonx Orchestrate interface with the 'Skill studio' tab selected. On the left, a sidebar lists 'Chat', 'Skill sets', and 'Skill catalog' under 'Skill studio'. Below this are sections for 'BUILD' (AI assistant builder) and 'ADMINISTER' (Access management). The main area is titled 'Skill catalog' and contains a table of skills. The columns are 'Step in the process', 'Status', 'Skill type', 'Author', and 'Last edited'. There are three rows of skills, all marked as 'Published' and 'Imported' by 'andrew@jones-tx.com' on January 19, 2025.

Step in the process	Status	Skill type	Author	Last edited
	Ready to use	Published	Imported	andrew@jones-tx.com January 19 2025
	Ready to use	Published	Imported	andrew@jones-tx.com January 19 2025
	Ready to use	Published	Imported	andrew@jones-tx.com January 19 2025

2. Enter certs in the search bar.

The screenshot shows the 'Skill catalog' page. A search bar at the top contains the text 'certs'. Below the search bar, there's a heading 'Most popular skills' followed by three tiles: 'Send an email from Gmail', 'Create a lead in Salesforce', and 'Send an email using Outlook'. Underneath these is a section for 'All Apps' with several app icons visible.

3. Click the certs tile.

The screenshot shows the 'Skill catalog' page again. The search bar now contains 'certs'. In the 'Most popular skills' section, the third tile, 'Send an email using Outlook', is highlighted with a green box. Below this, under 'Apps', there is a tile for 'Ansible Controller Skills - certs' which is also highlighted with a green box.

4. Click Add skill + for each of the 3 skills in the certs app.

Skills Connections

These are the applications that are used by the skills in team skill set. Application connections are required to execute skills. Set preference at an application level to enable skills to either use personal or team credentials.

Application	Number of skills	Credential type	Connected by	Action
Ansible Controller Skills - certs	3	Not specified	-	

Items per page: 5 1-1 of 1 items 1 of 1 page

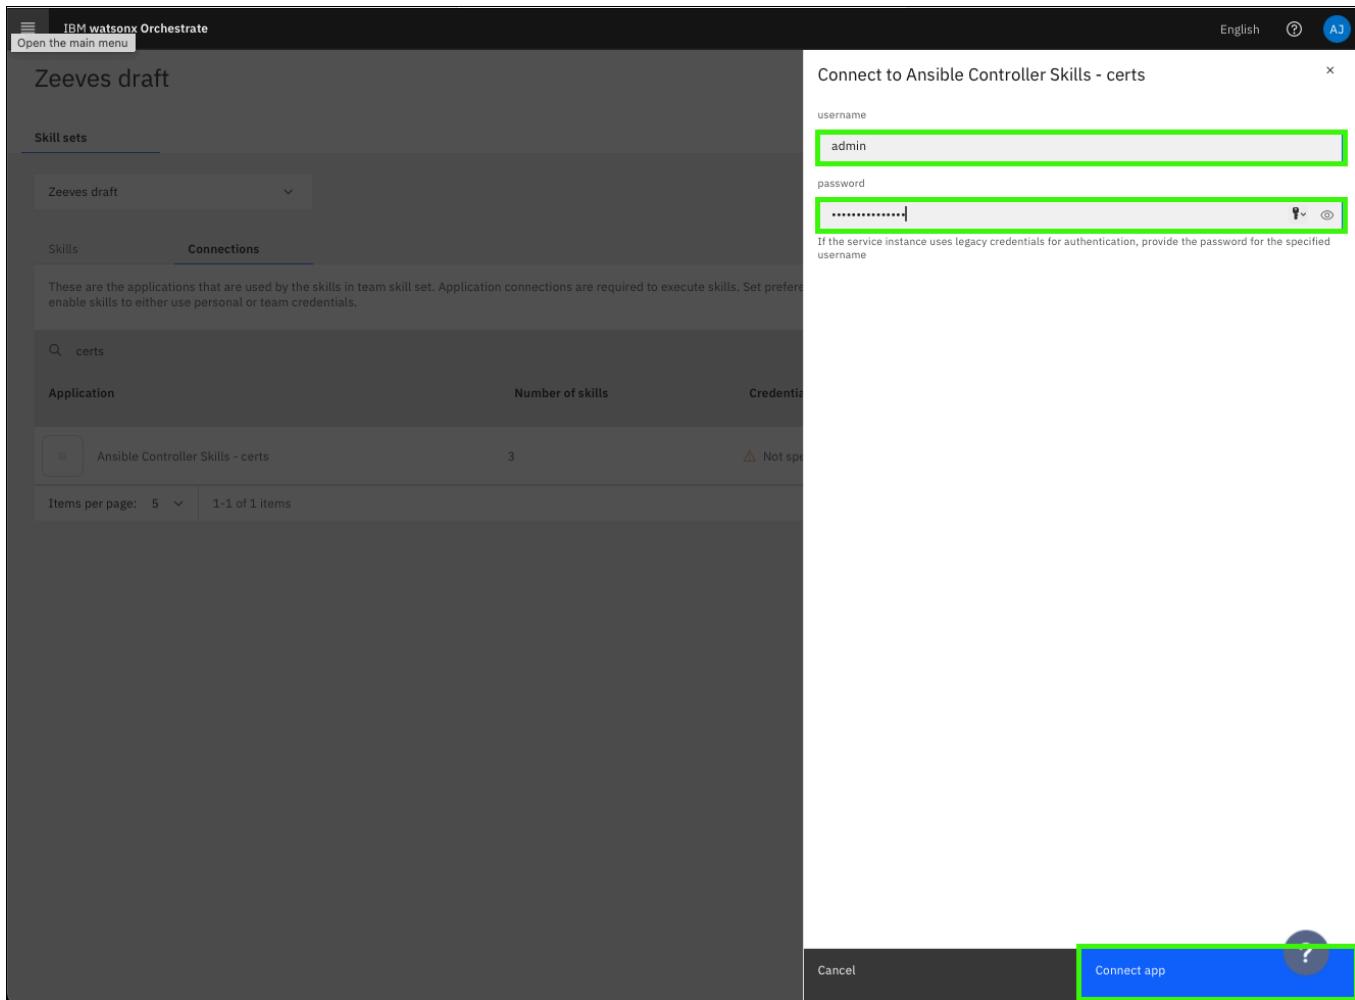

4. Click the ellipses (⋮) for the certs app and select Connect app*.

The screenshot shows the 'Skill sets' section for 'Zeeves draft'. Under the 'Connections' tab, there is a table listing applications used by skills. One row for 'Ansible Controller Skills - certs' is selected, indicated by a green dotted border around its entire row. To the right of this row is a column labeled 'Action' containing a green box around the 'Connect app' button. Other columns in the table include 'Application', 'Number of skills', 'Credential type', and 'Connected by'.

5. Click Connect app.

This screenshot shows a modal dialog titled 'Connect to Ansible Controller Skills - certs'. It contains two radio button options: 'Member credentials' and 'Team credentials'. The 'Team credentials' option is selected and highlighted with a green box. Below the radio buttons, there is descriptive text about team credentials. At the bottom of the dialog is a green box around the 'Connect app' button.

6. Enter your AAP Username and AAP Password and then click Connect app.

Create a skill flow to retrieve certificate expiration dates.

The goal of this scenario is to configure the assistant to automate the certificate renewal process for the client. The first step in that process is to help the security administrator identify the expiration date of their z/OS certificate. You have now imported the **z/OS Certs – List Cert** skill from Ansible Automation Platform. Next, create a skill flow using that skill which can later be leveraged in a natural conversation through assistant actions.

First, create a skill flow to retrieve and display the expiration date of a z/OS certificate based on the certificate label the user provides.

1. Open **Skill studio** in watsonx Orchestrate.

The screenshot shows the IBM Watsonx Orchestrate dashboard. On the left, there's a sidebar with several sections: Chat, Skill sets (which is currently selected and highlighted with a green border), Skill catalog, BUILD (with AI assistant builder and Skill studio options), and ADMINISTER (with Access management). The main content area has a heading 'Skill sets' and a table with columns: Number of skills, Credential type, Connected by ⓘ, and Action. A tooltip for Skill sets says: 'Skills are used by the skills in team skill set. Application connections are required to execute skills. Set preference at an application level to use skills in your skill set or team credentials.'

2. Click **Create** and then click **Skill flow**.

This screenshot shows the 'Skill studio' interface. At the top, there's a 'Welcome to Skill studio' message and a sub-header 'Optimize productivity by using projects to build and manage skill flows and connectors.' Below this, there are tabs for 'Skills and apps' (which is active and highlighted) and 'Projects'. Under 'Skills and apps', there are 'Skills' and 'Apps' buttons, and a search bar with 'Find a skill'. On the right, there's a 'Create' dropdown menu with four options: 'Skill Flow' (which is highlighted with a green border), 'Import API', and 'Configure prebuilt skills'. The bottom of the screen shows a 'Skills' section.

3. Click the **+** icon.

This screenshot shows the 'Create a Flow' interface. The top navigation bar includes 'Skills and apps / Create a Flow', 'Close', and 'Actions'. The main workspace shows a flowchart with three nodes: a green circle labeled 'Start', a red circle labeled 'End', and a central square node with a plus sign inside. Arrows connect the 'Start' node to the plus node and the plus node to the 'End' node. There are also small icons for opening and saving files in the top right corner of the workspace.

4. Click the **certs** app.

Search on certs if you do not see the tile for your app.

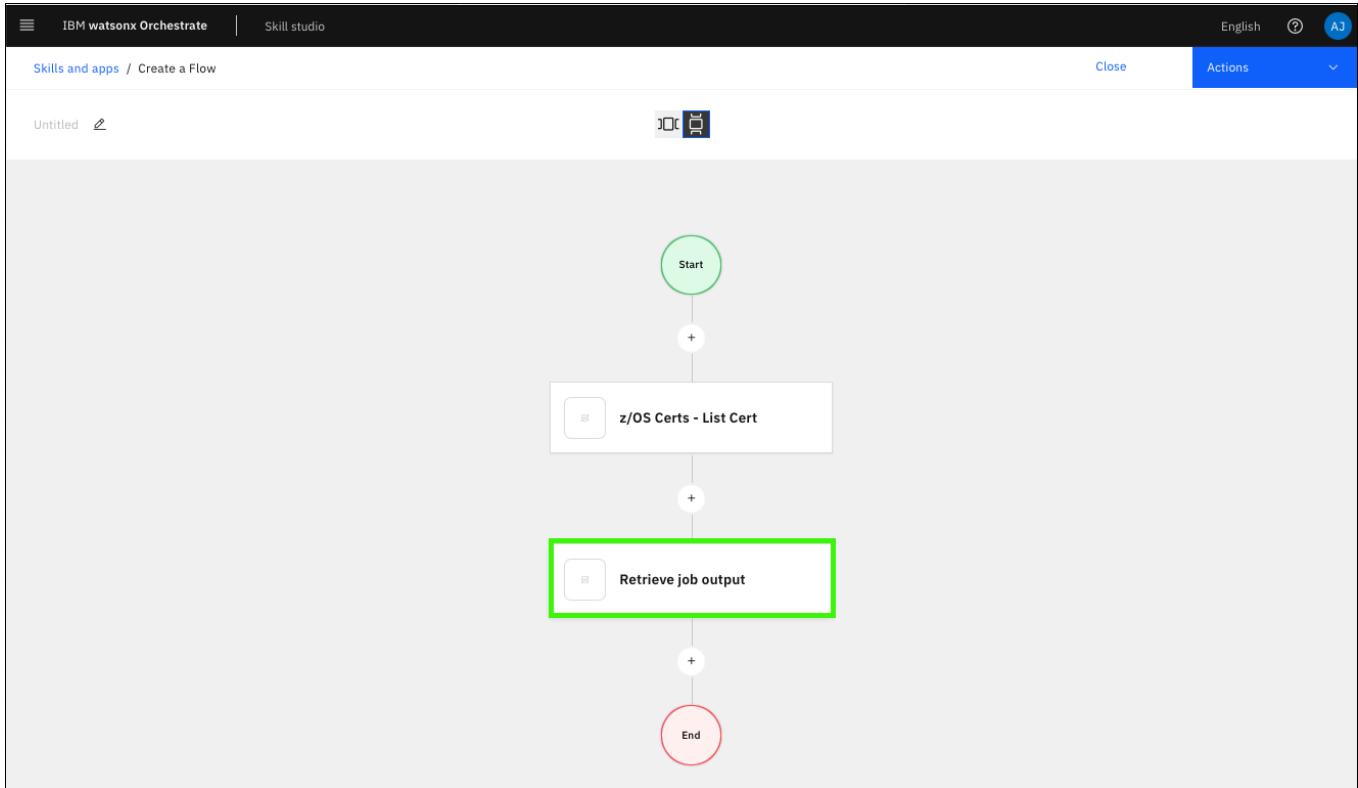

The screenshot shows the 'Skill studio' interface in IBM Watsonx Orchestrator. On the left, there's a flowchart with a green 'Start' node and a red 'End' node. A modal window titled 'Add Skills' is open on the right, displaying a grid of skill categories. One category, 'Ansible Controller Skills - certs', is highlighted with a green border. Below the grid, a message says 'Total apps: 84. Viewing section 1 of 2'.

5. Click Add Skill + in the z/OS Certs - List Cert tile.

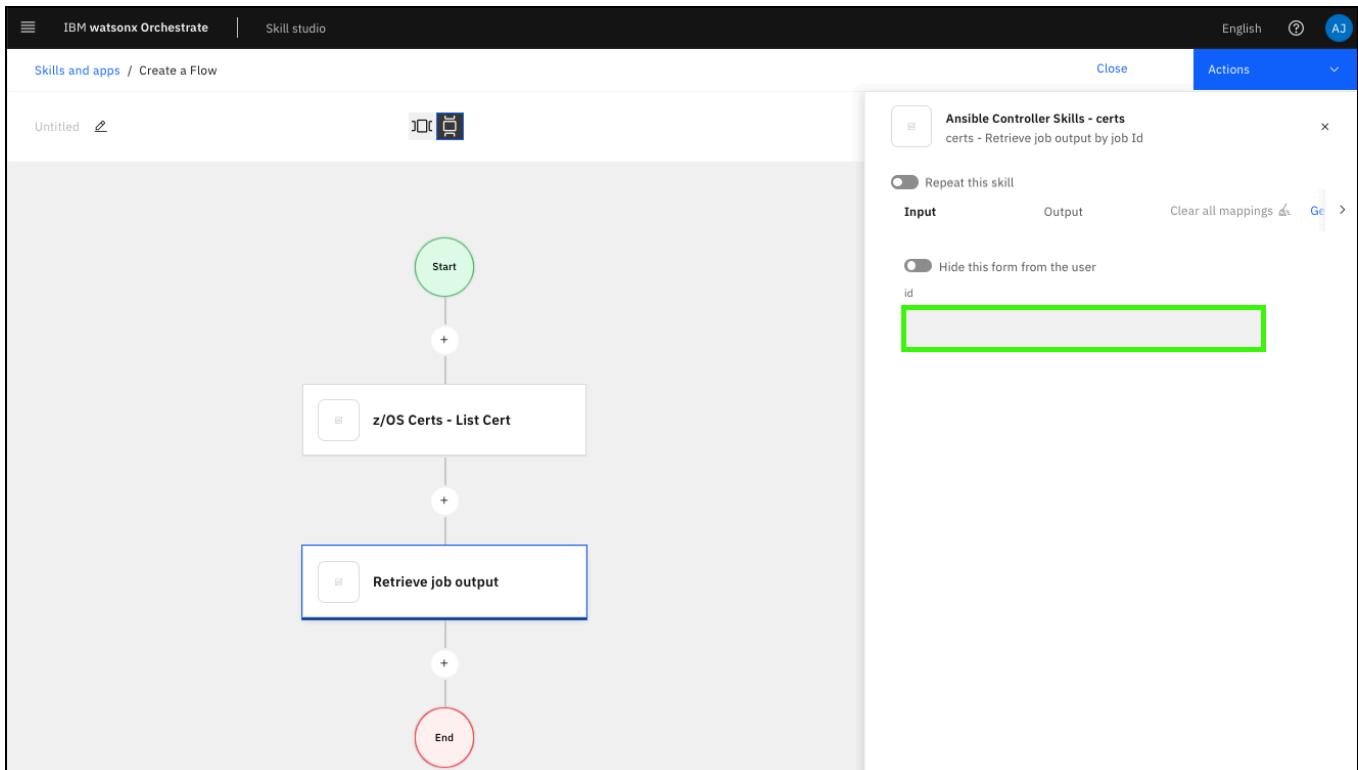

The screenshot shows the 'Ansible Controller Skills - certs' tile from the previous step. It lists two skills: 'Retrieve job output' and 'z/OS Certs - List Cert'. Each skill has an 'Add Skill +' button below it, which is highlighted with a green border.

6. Click the + icon **below** the z/OS Certs - List Cert skill and repeat steps 4 and 5 to add the **Retrieve job output** skill.

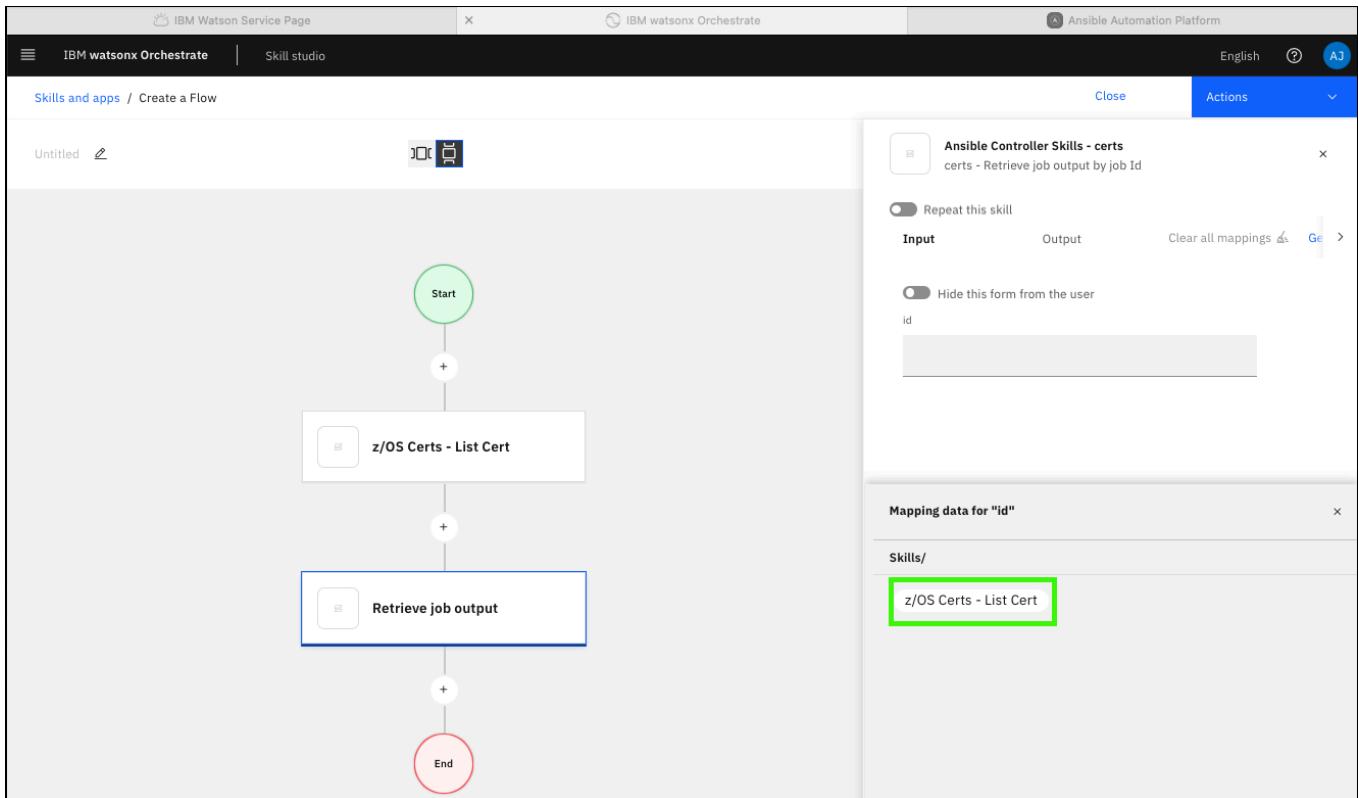

7. Click the **Retrieve job output** skill.

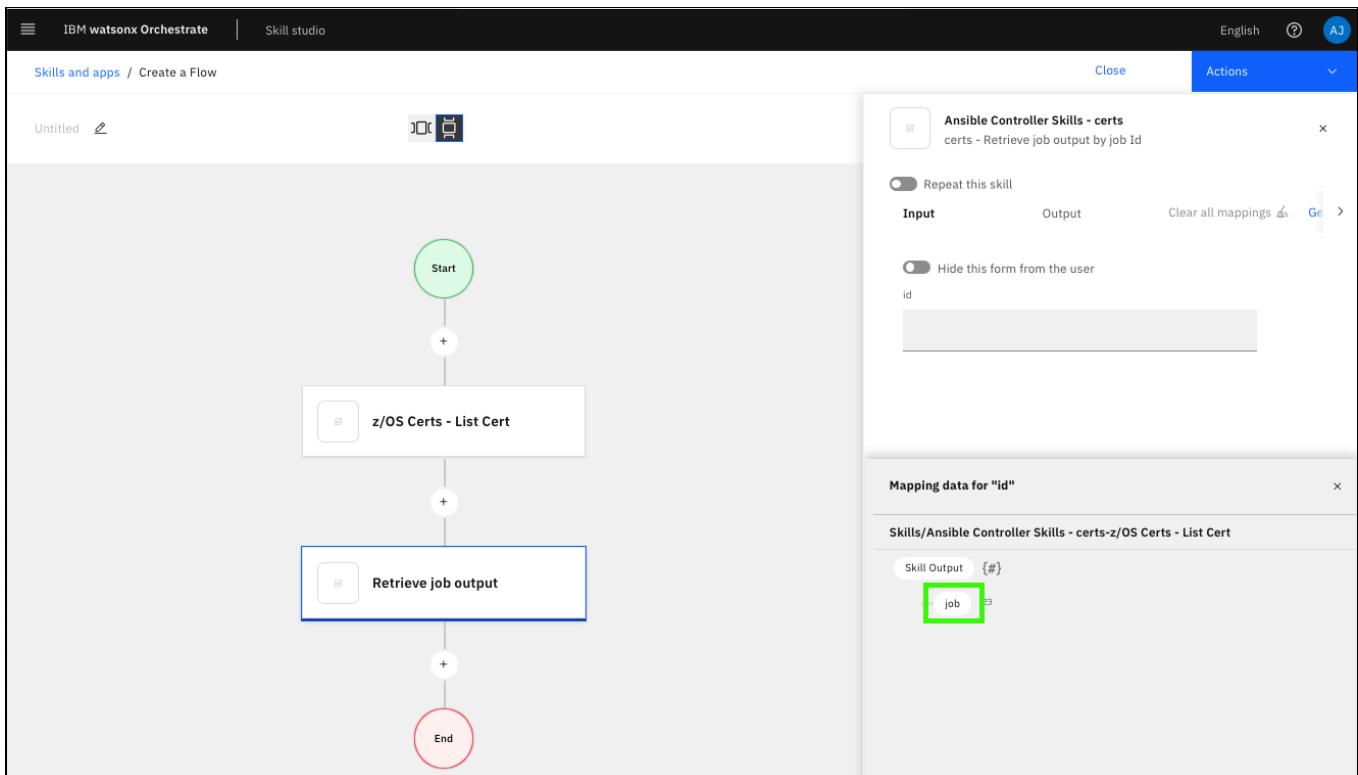

8. Click the **id** field.

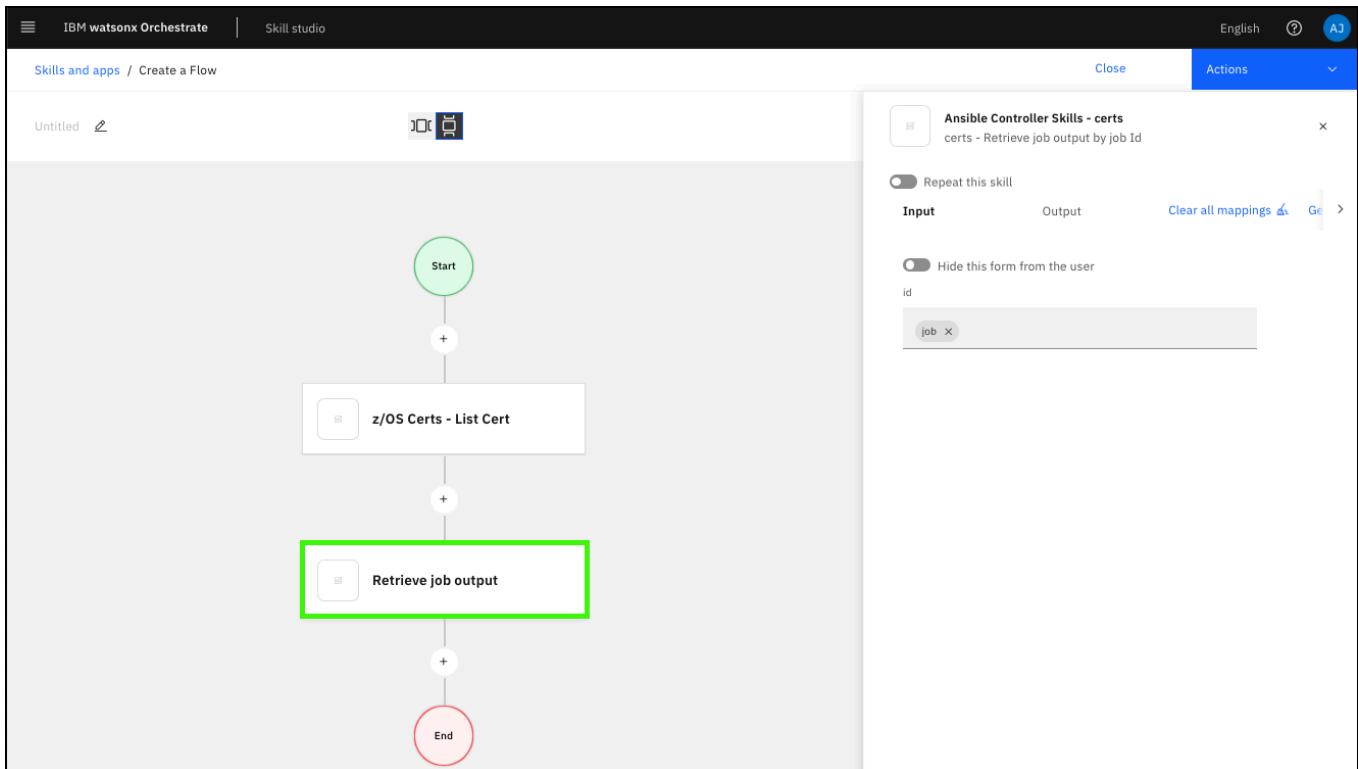

9. Click **z/OS certs - List Cert**.

10. Click job.

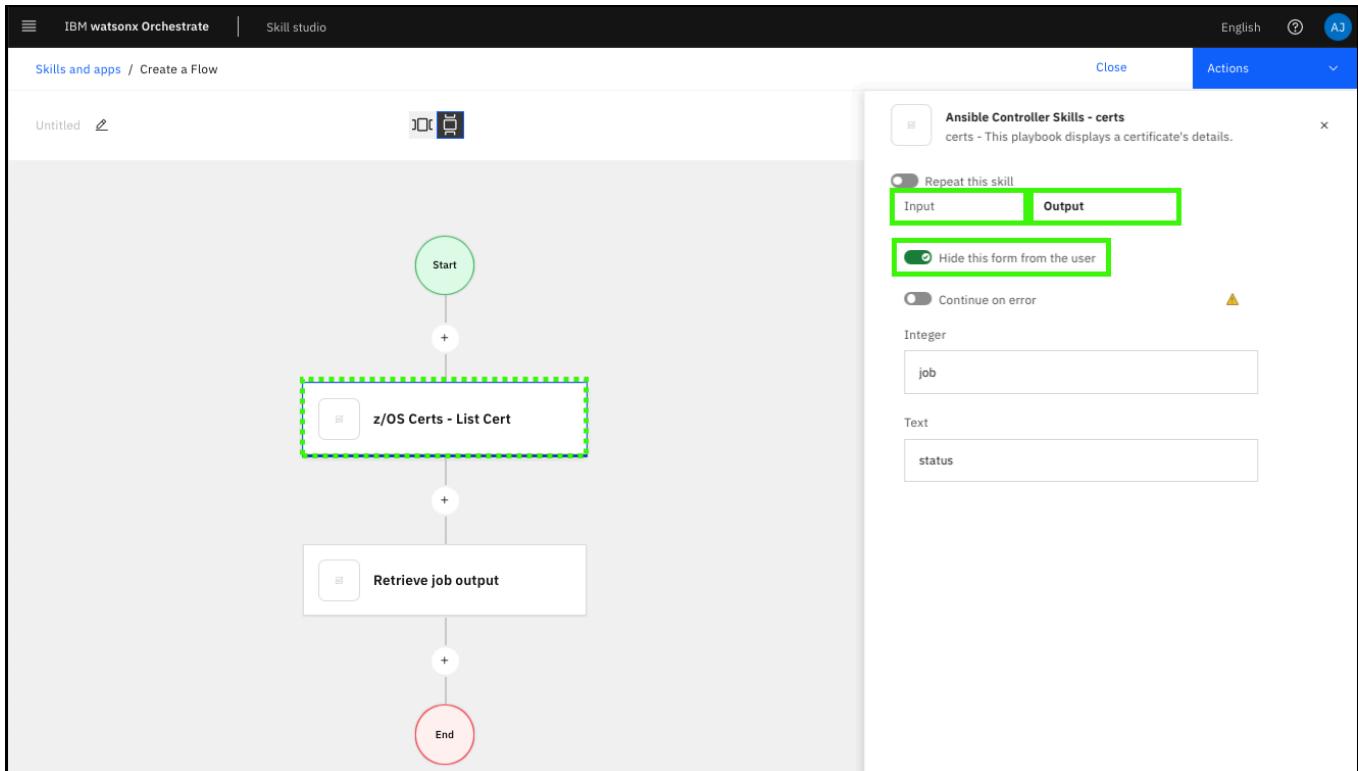

11. Click the z/OS Certs - List Cert tile.

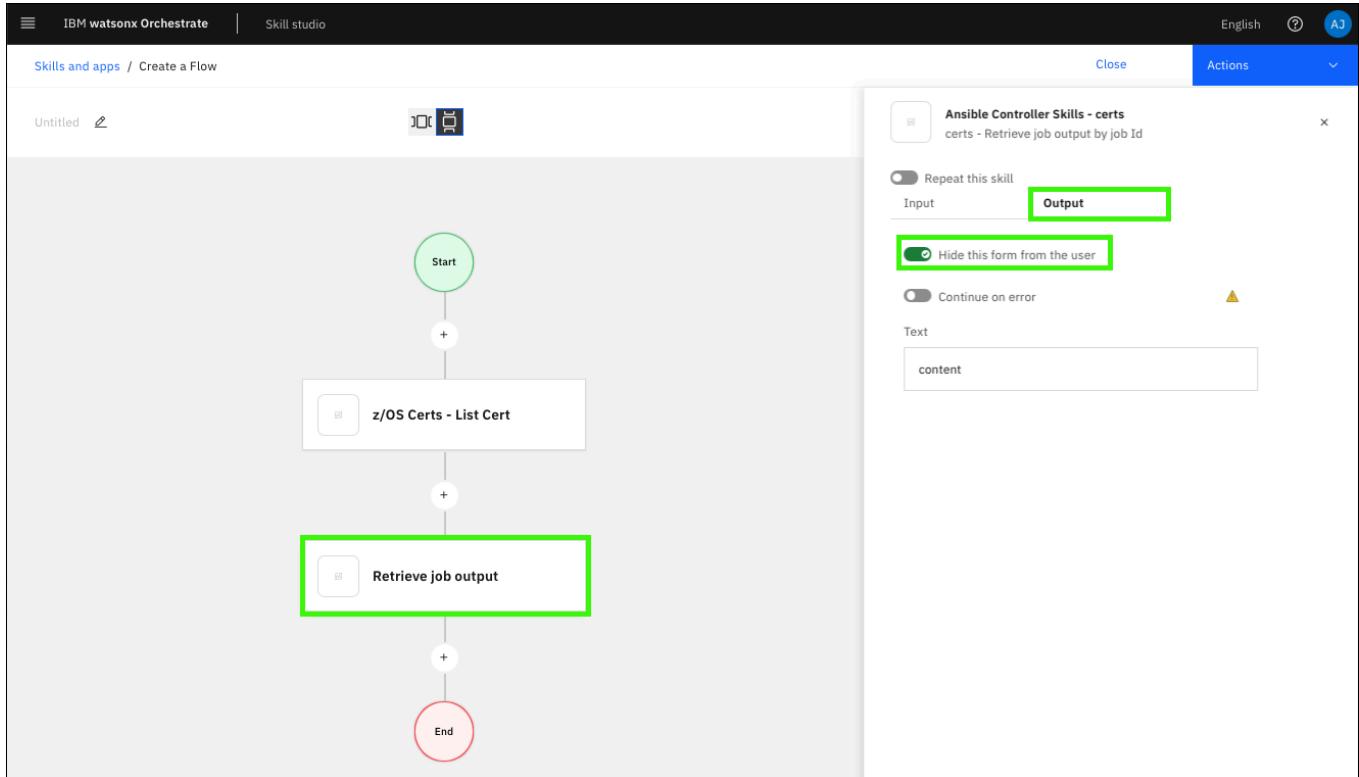

12. On both the **Input** and **Output** tabs for the **z/OS Certs - List Cert** skill, enable the **Hide this form from the user** options.

To enhance the user experience, hide the input and output forms from the user. This will disable the List Cert skill form from being displayed. Rather than the user entering in their certificate details as input to the skill form, those details can be gathered into the skill through user prompts when creating an assistant action. This enables a more natural conversation flow when interacting with the assistant.

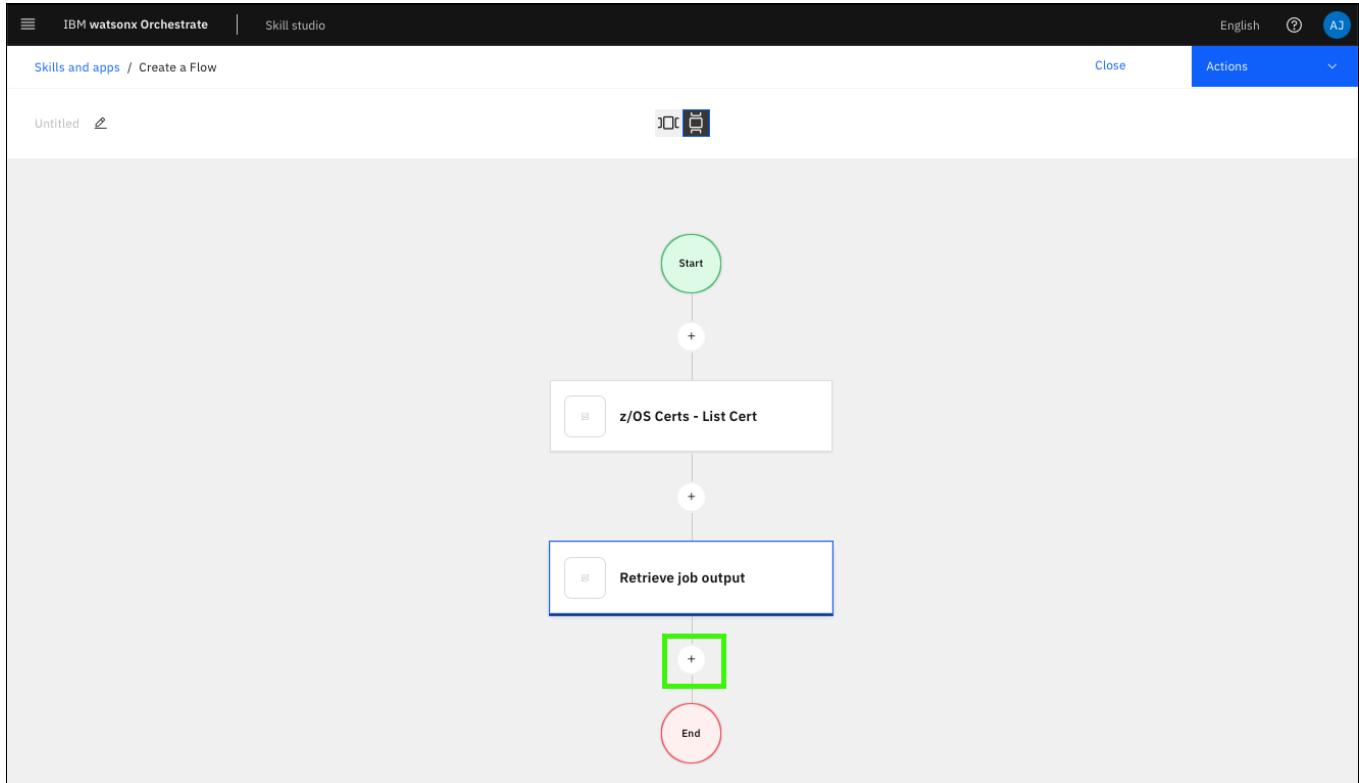

13. Repeat step 12 for the **Output** of the **Retrieve job output** skill.

The output of the **List Cert** skill includes a large amount of data. In the assistant, only the **certificate expiration date** is needed. In the next steps, transform the output to only return the **certificate expiration date**.

14. Click the **+** icon **below** the **Retrieve job output** skill.

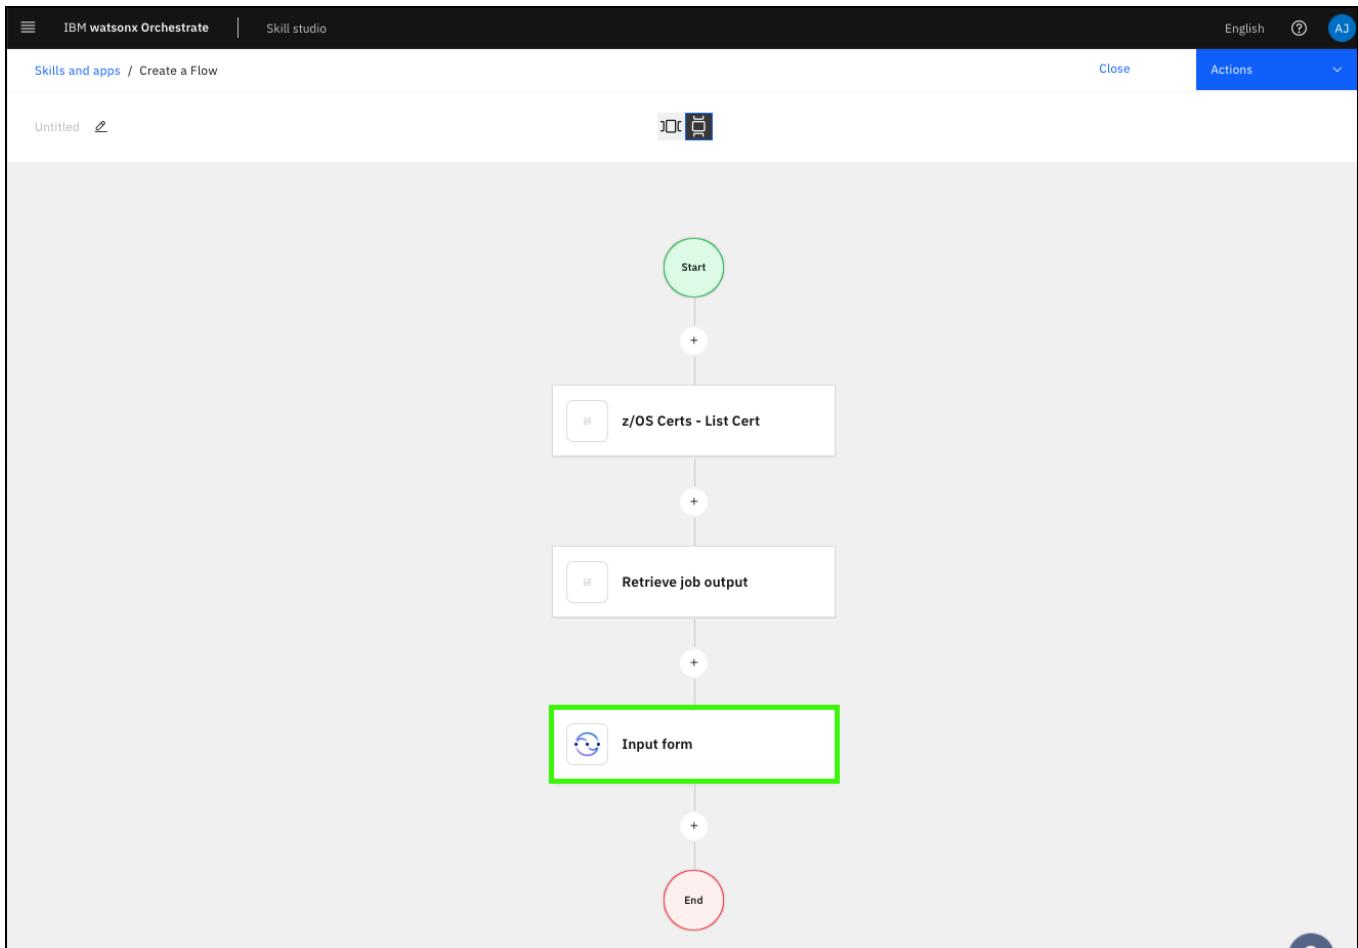

15. Click the **Custom forms**.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, a flow diagram titled 'Untitled' is displayed. It starts with a 'Start' node, followed by a 'z/OS Certs - List Cert' action, then a 'Retrieve job output' step (which is currently selected and highlighted with a blue border), and finally an 'End' node. On the right, a modal window titled 'Add Skills' is open, showing a grid of various skills. The 'Custom forms' skill, which has 2 skills, is highlighted with a green border.

16. Click Add skill + in the Input form.

The screenshot shows the same flow diagram as before. The 'Add Skills' modal is still open, but now the 'Input form' skill, which displays a form to input data, is highlighted with a green dashed border. The 'Add Skill +' button next to it is also highlighted with a green border.

17. Click the **Input form** skill.

18. Click Add input field +.

Custom forms

Display a form to input data

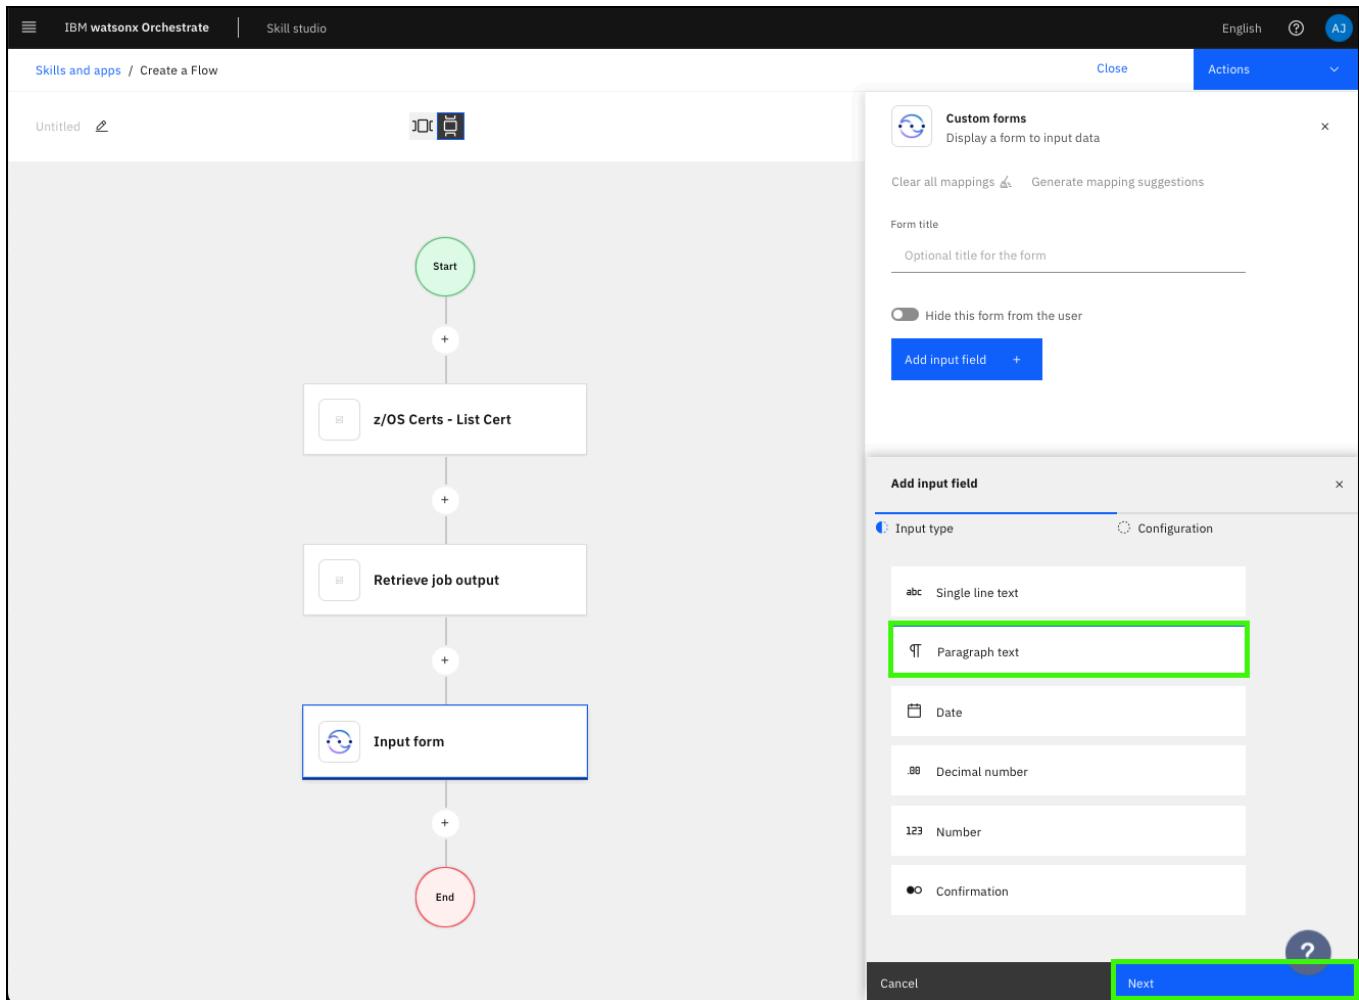

[Clear all mappings](#) [Generate mapping suggestions](#)

Form title

Hide this form from the user

Add input field +

19. Click Paragraph text and then click Next.

20. Enter certificate expiration date in the **Display label** field and click **Apply**.

Display label:

certificate expiration date

The screenshot shows the IBM Watsonx Orchestrate Skill studio interface. On the left, a flow diagram is displayed with the following steps:

- Start
- + z/OS Certs - List Cert
- + Retrieve job output
- + Input form
- End

The "Input form" step is currently selected. To the right of the flow diagram, a "Custom forms" dialog is open. It contains the following fields:

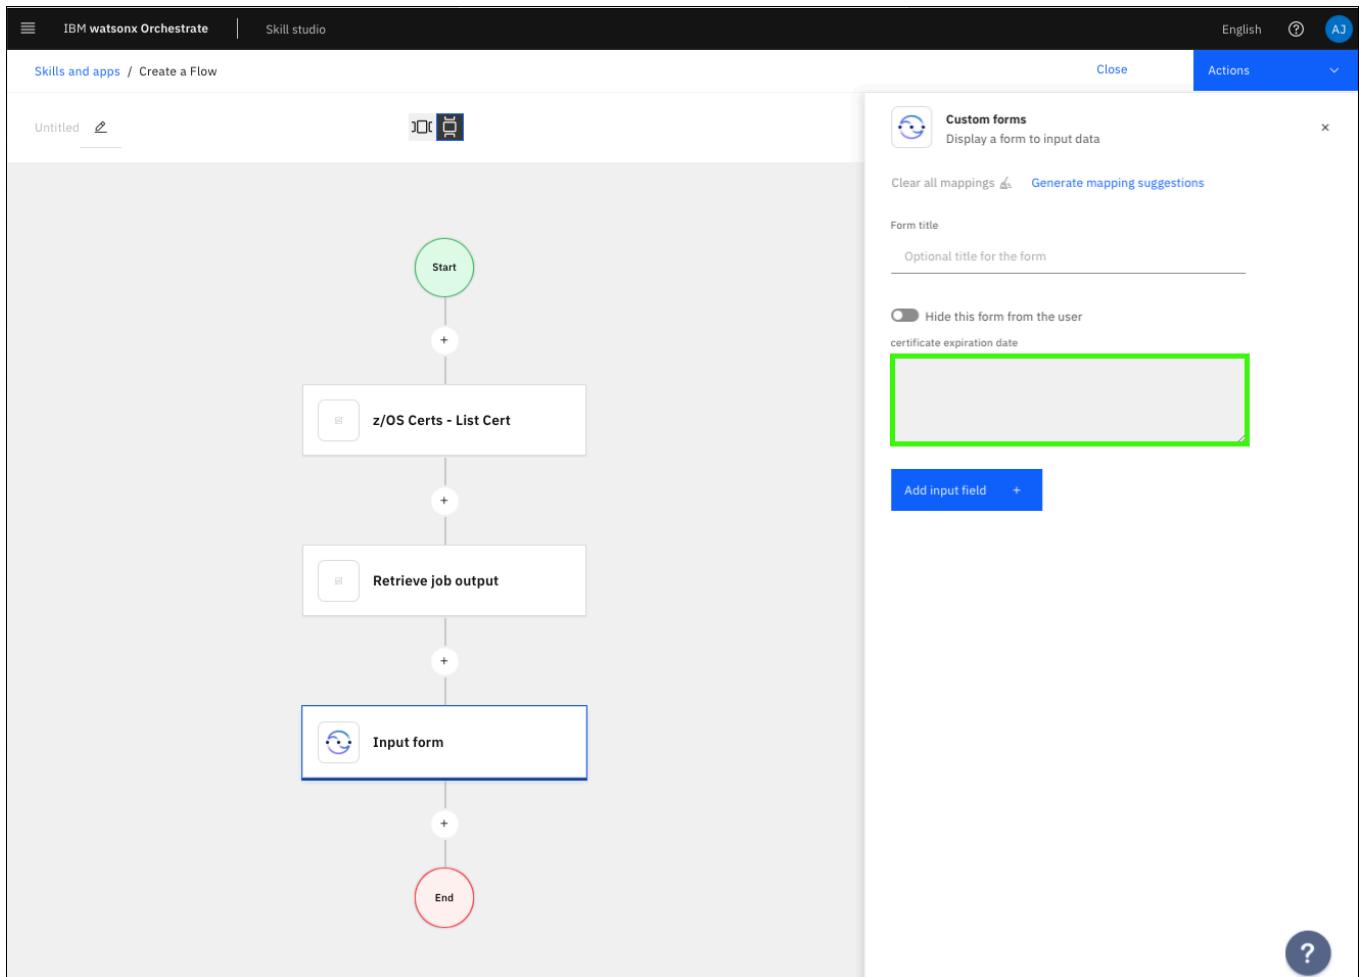

- Form title: (empty)
- Optional title for the user: (empty)
- Hide this form from the user: (checkbox)
- Add input field: +

A sub-dialog titled "Add input field" is also open, showing the configuration for the input field:

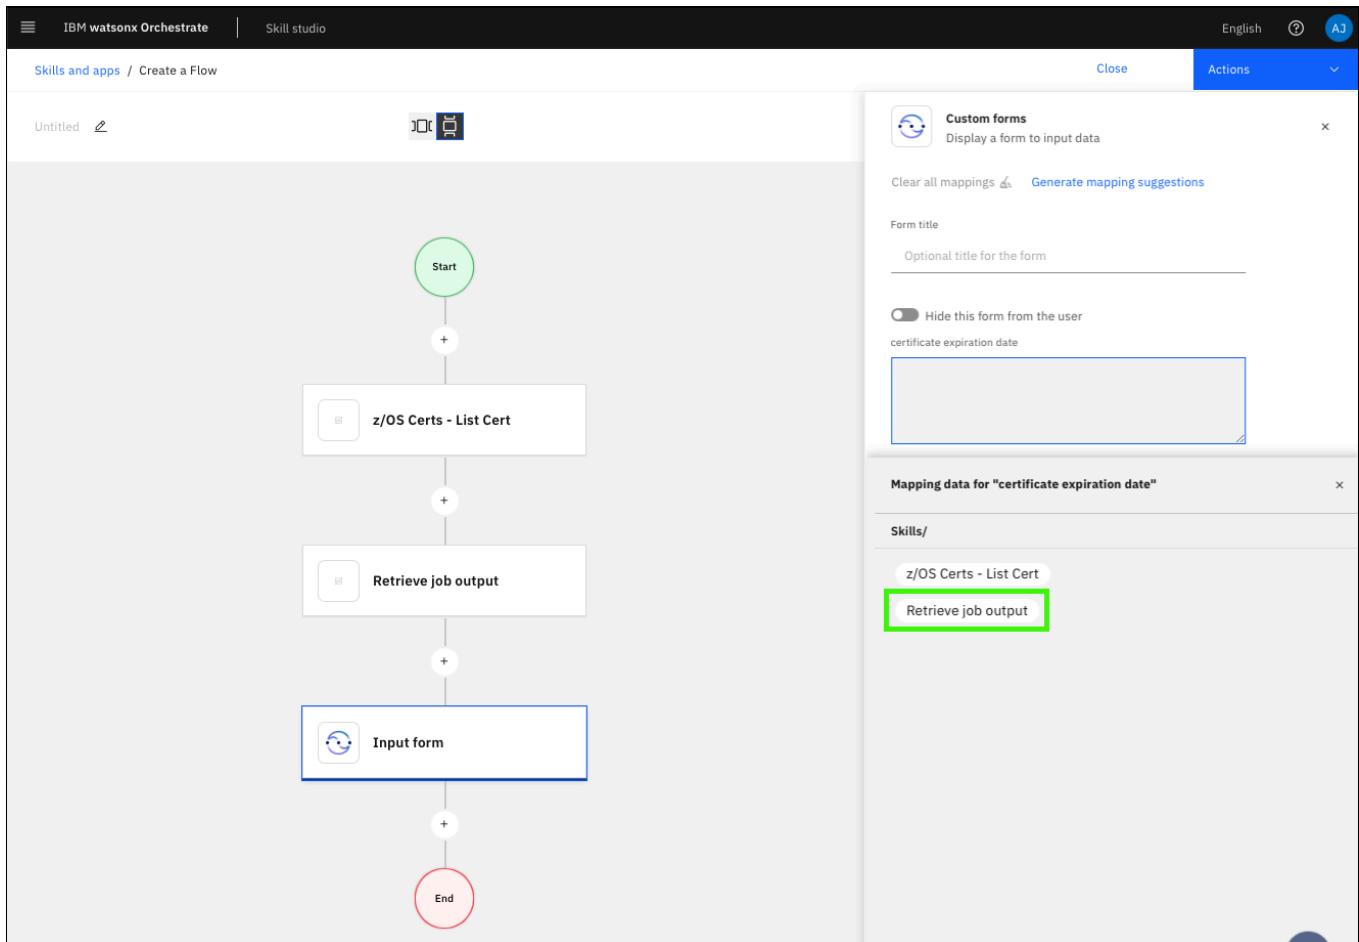

- Input type: (radio button selected)
- Display label: certificate expiration date

At the bottom of the dialog, there are "Cancel" and "Apply" buttons, with "Apply" being highlighted.

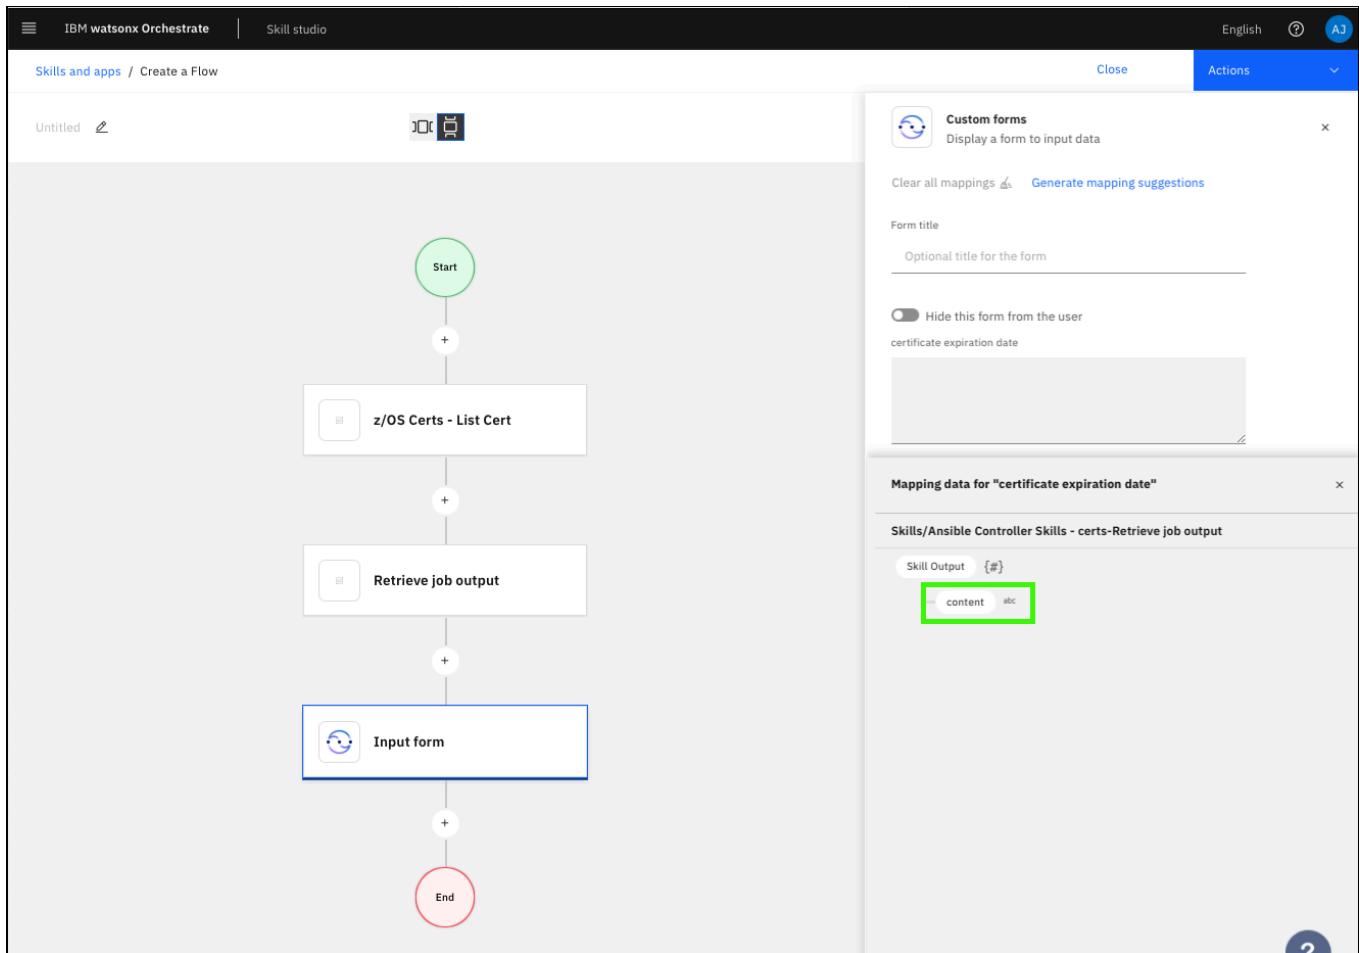

21. Click the **certificate expiration date** entry field.

22. In the **Mapping data for "certificate expiration data"** section, click **Retrieve job output**.

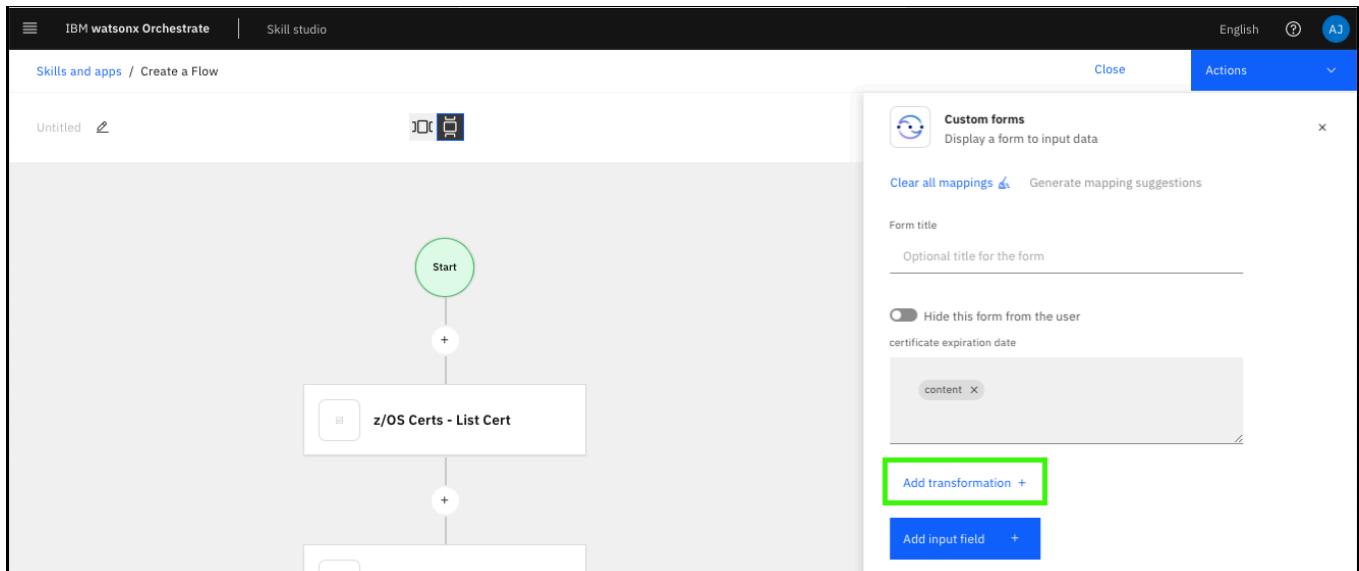

23. Click **content**.

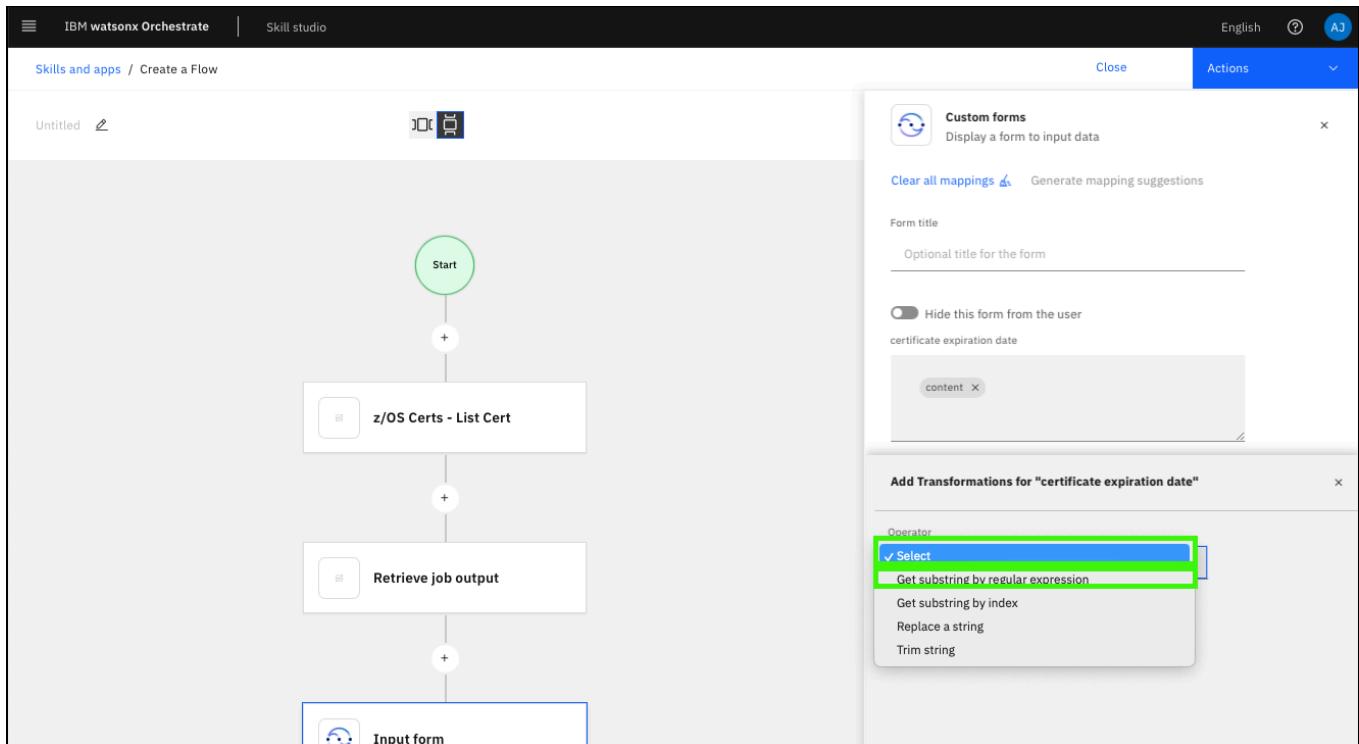

24. Click Add transformation +.

A transformation is used to extract the **certificate expiration date** from all the job output data.

25. Click the Select drop-down and select Get substring by regular expression.

26. Cut and paste the *regular express* that follows to extract the certificate end date and then click **Add**.

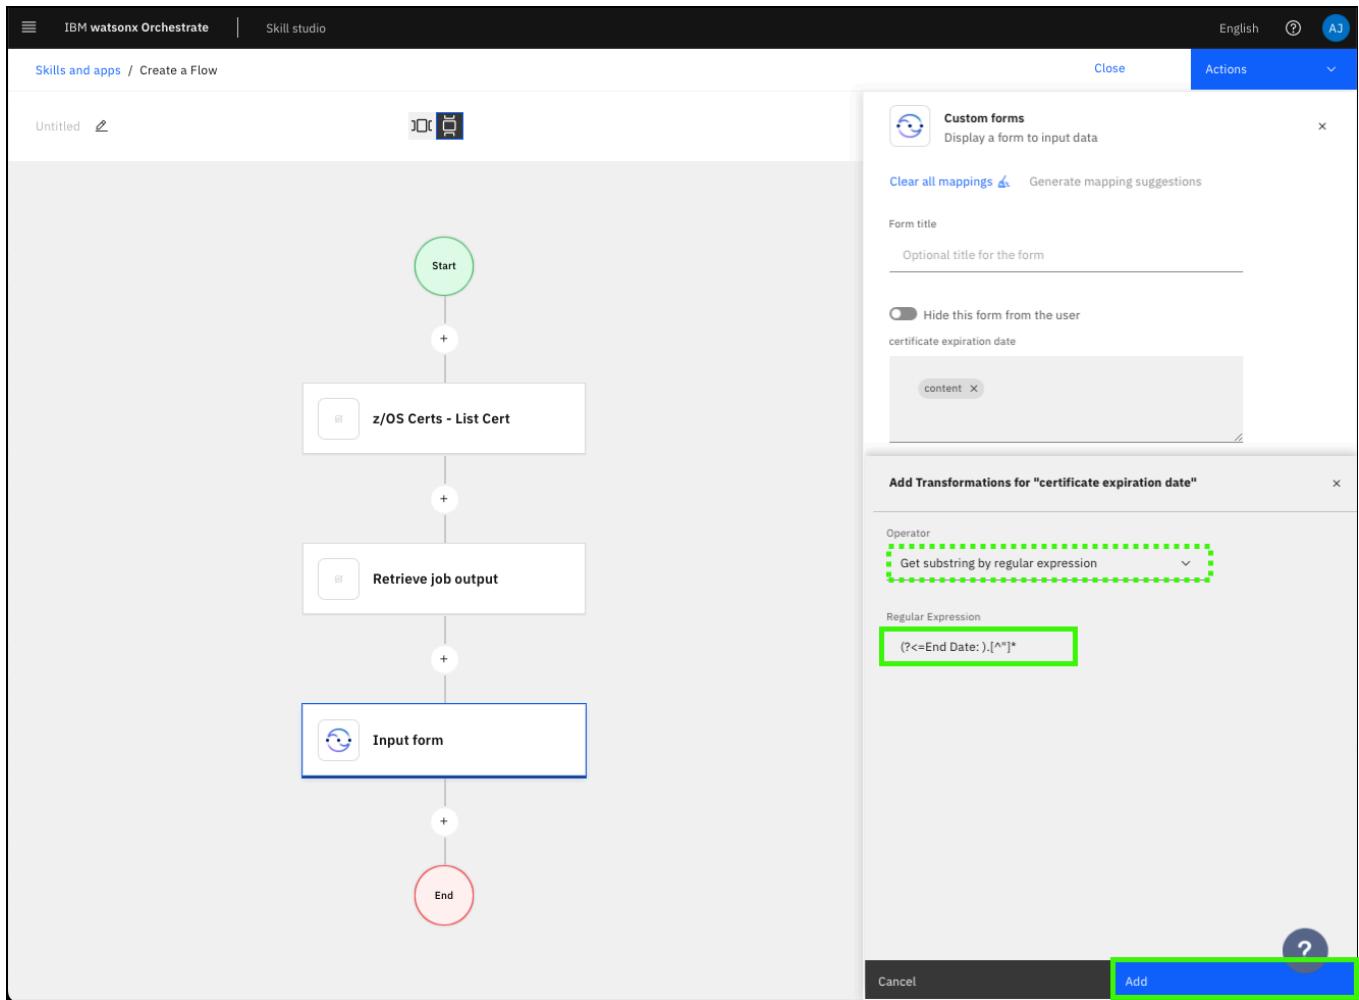

Regular Expression:

```
(?=<End Date: ).[^"]*
```

Note

There are several ways to transform data to match the type of output you need. In the above example, regular expression is used to get the needed output (the certificate expiration date). This regular expression was tested against the output of the z/OS Certs – List Cert Ansible job to extract the value assigned to the 'End Date' field in the job's output. After completing this use case, you can experiment with other regular expressions to extract additional information from the job's output.

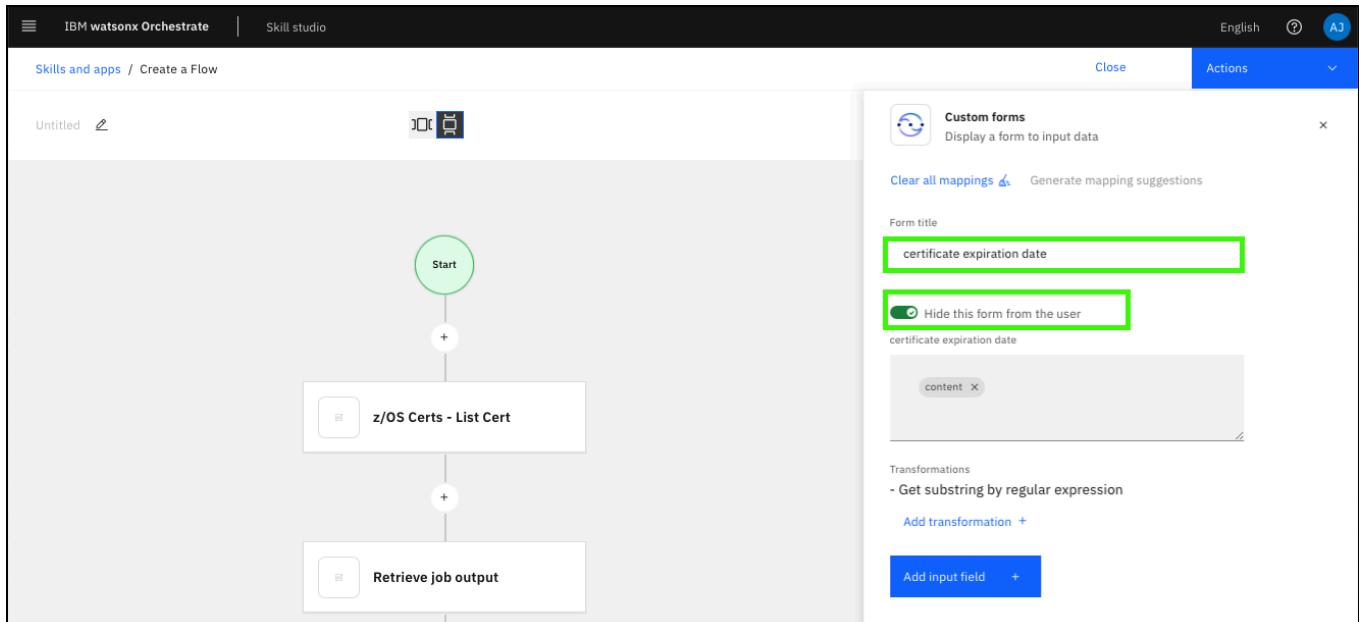

For more information on transforming data within Watsonx Orchestrate, review the documentation found [here](#).

27. Enter `certificate expiration date` in the form title and toggle on the **Hide this form from the user** option.

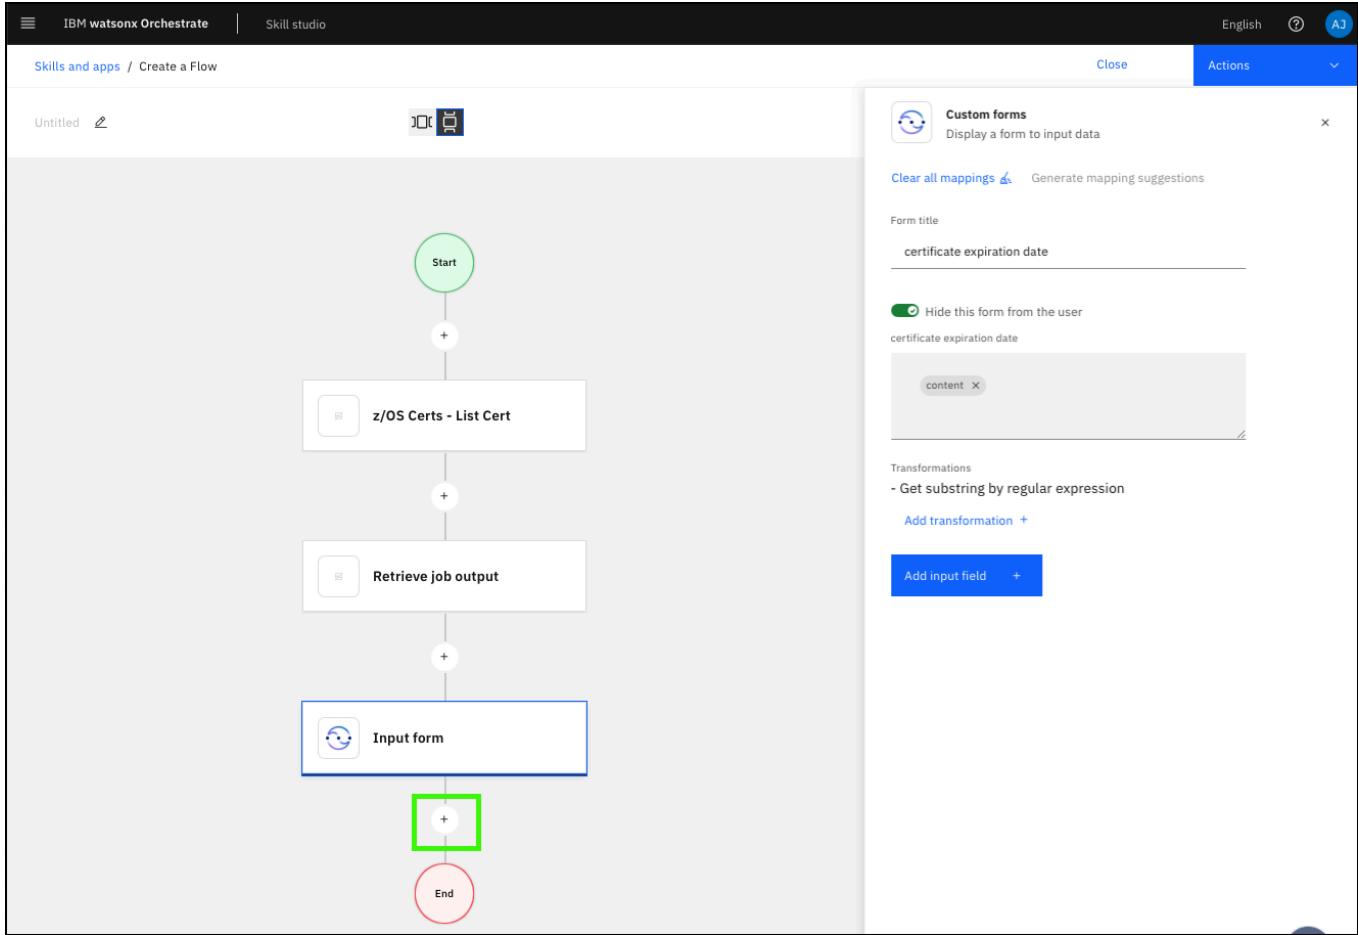

Form title:

certificate expiration date

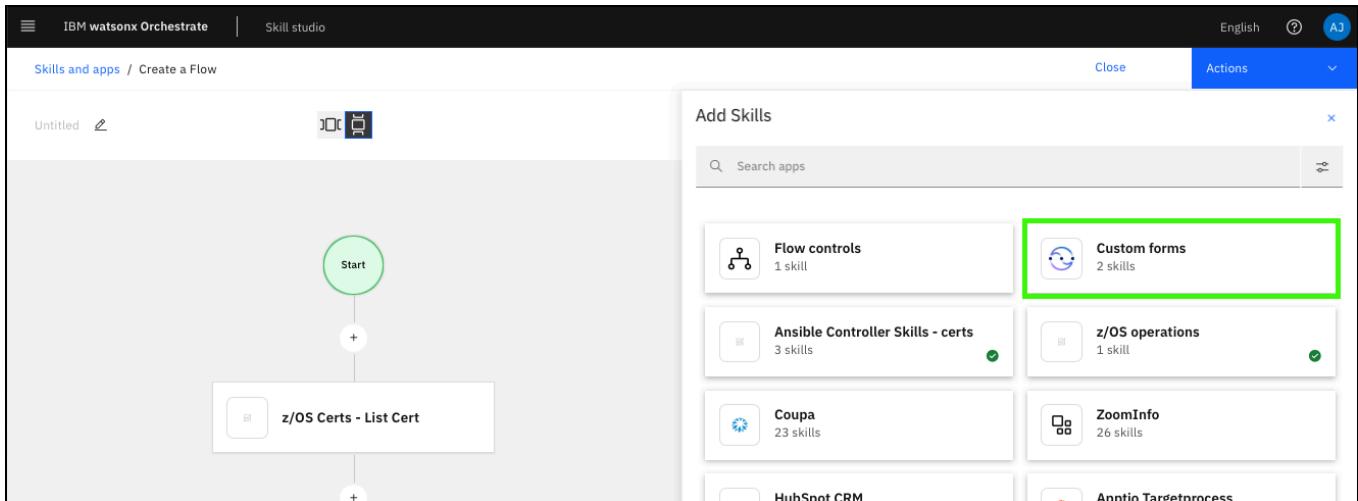

Next, create an output for to return the the transformed data from the input skill.

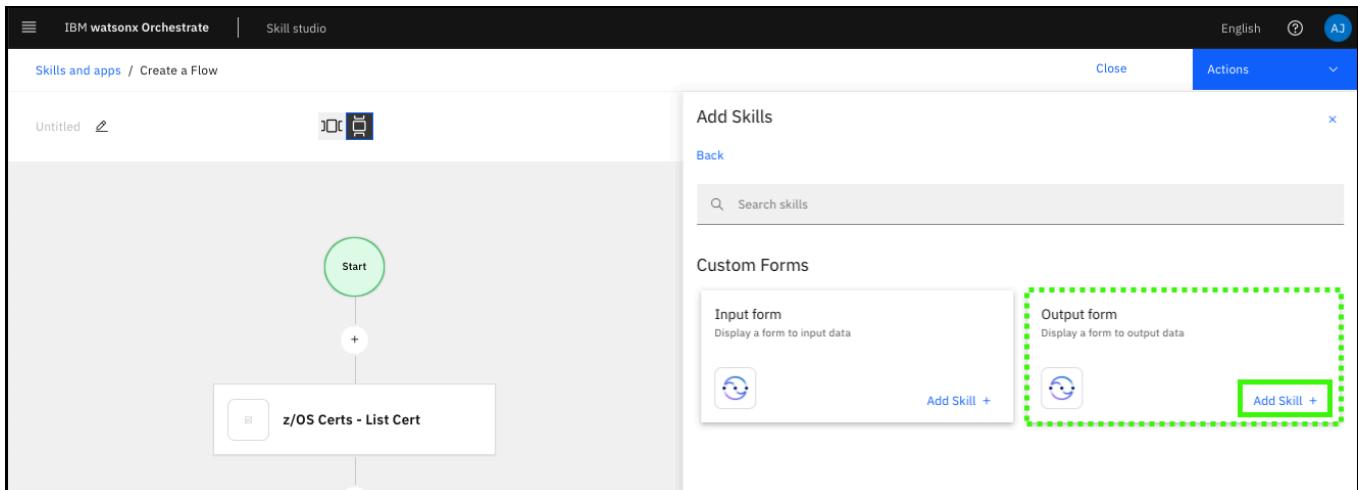

28. Click the **+** icon below the Input form.

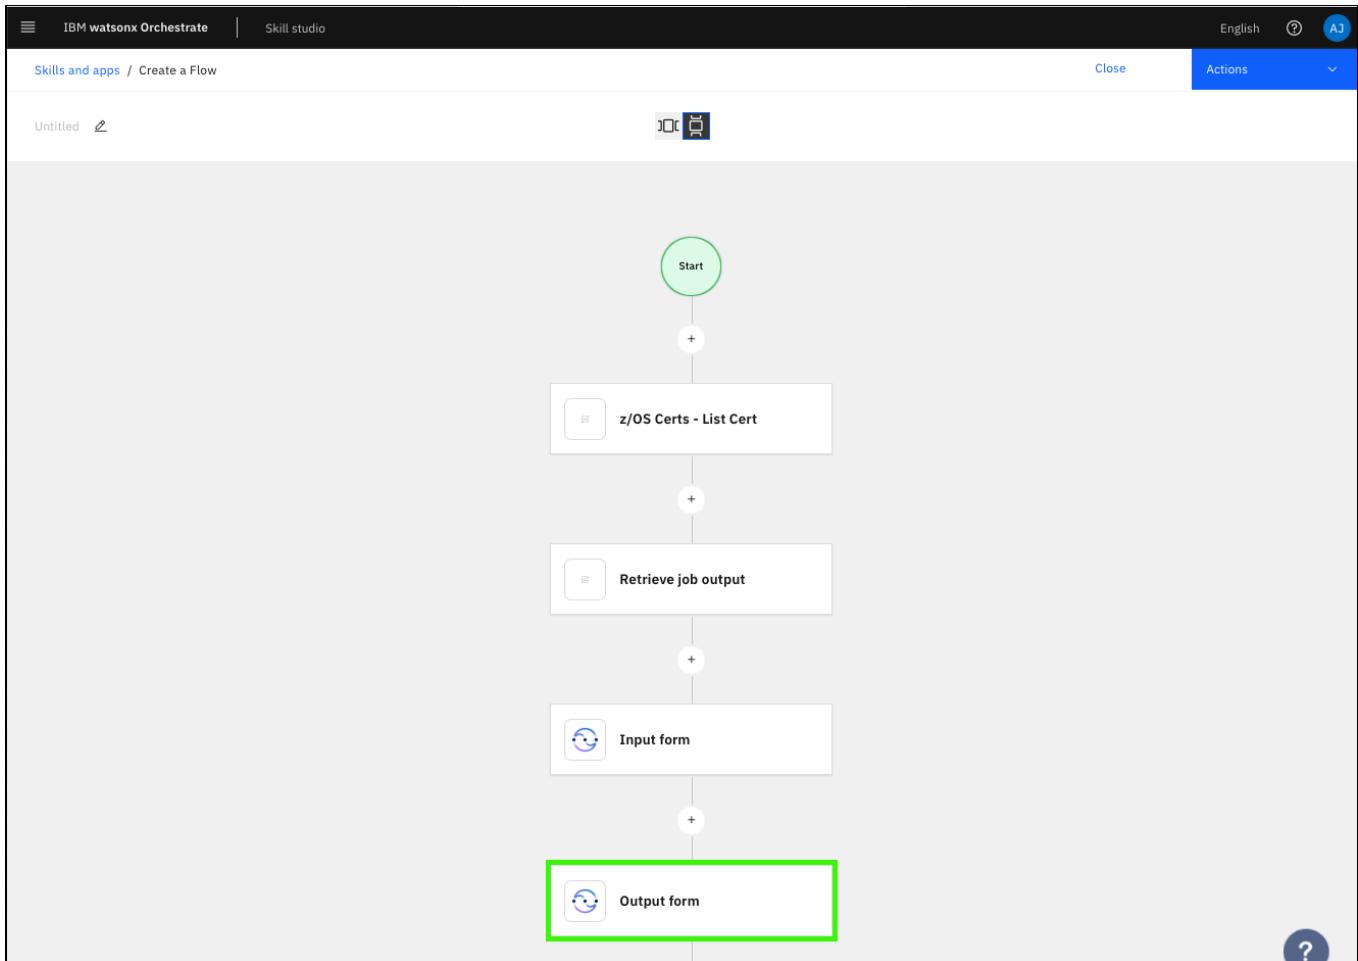

29. Click **Custom forms**.

30. Click **Add Skill +** in the **Output form** tile.

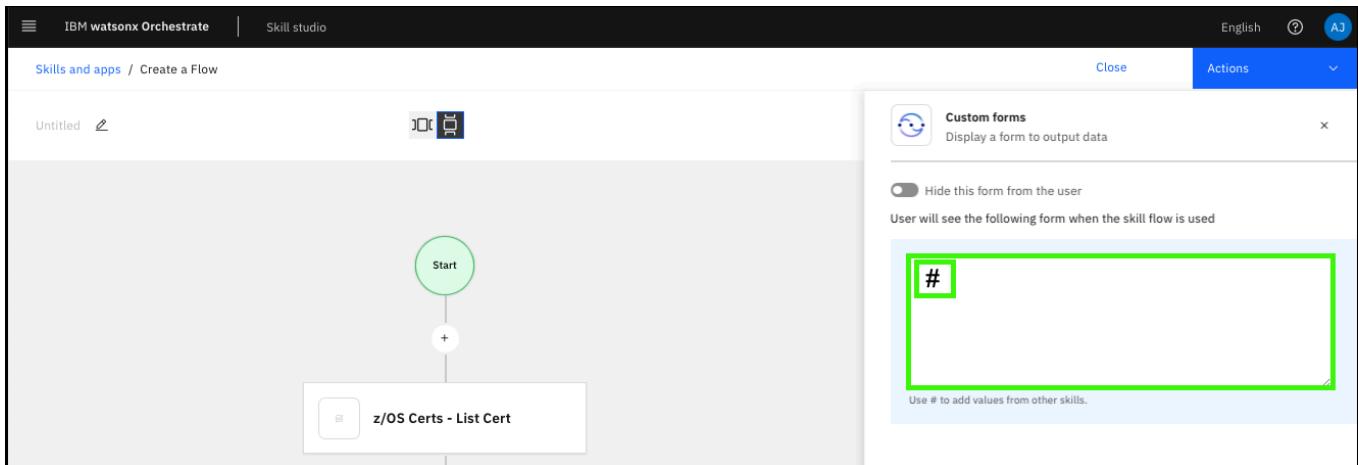

31. Click the **Output form** skill.

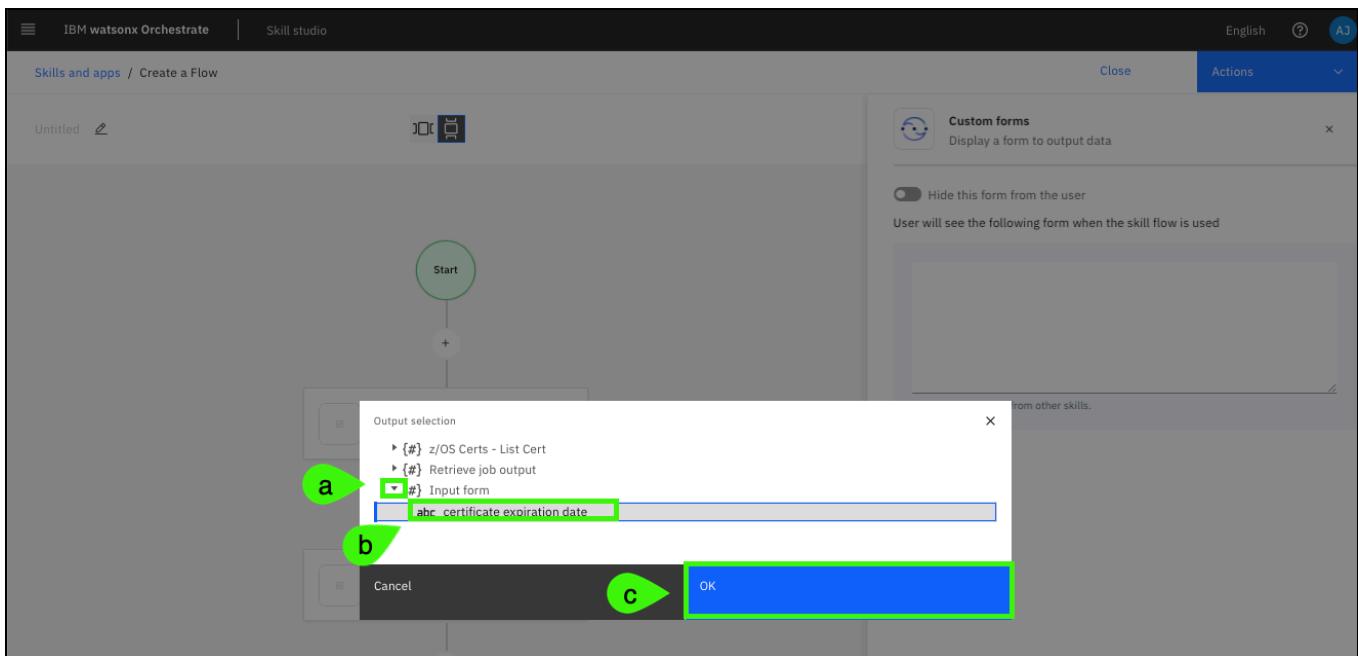

32. Click in the **Custom forms** text entry field and enter `#` (the pound key, also known as the number sign or hash key).

Typing the `#` will open a new dialog window.

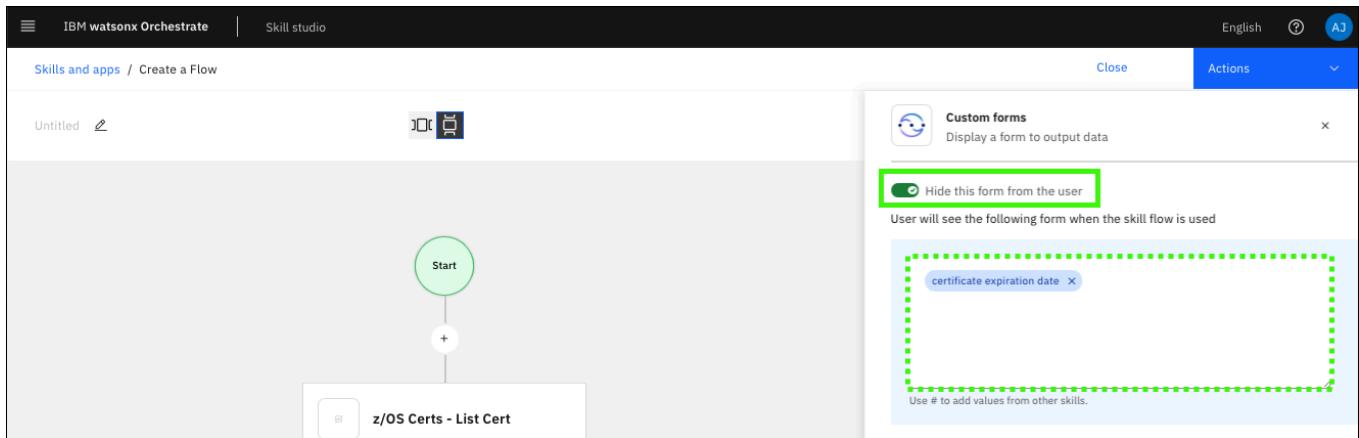

33. Expand (a) **Input form**, select (b) **certificate expiration date**, and then click (c) **OK**.

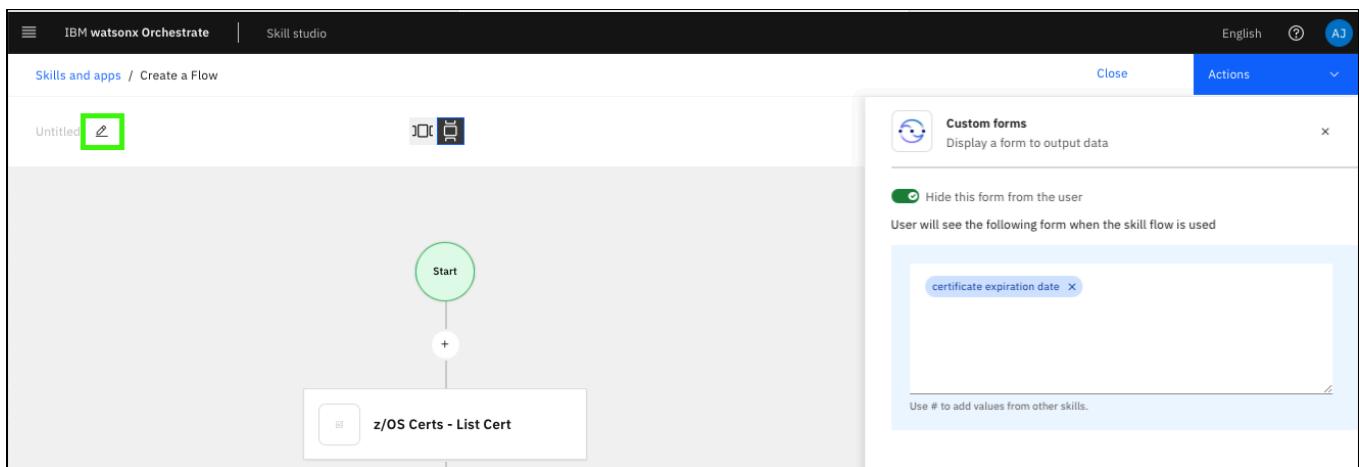

34. Enable the **Hide this form from the user** option.

Why hide some of the forms?

You may be wondering why hide the input and output forms for the skills in the skill flow. This is done to execute the automation based on user prompts for the inputs of the skills. This is done through natural conversation with the assistant when the skill flow is configured as an assistant ‘action’ (you will do this soon). Although the final output is hidden, it is accessible as a variable in a custom-built action. The value can be displayed exactly at the point it is expected in the conversation.

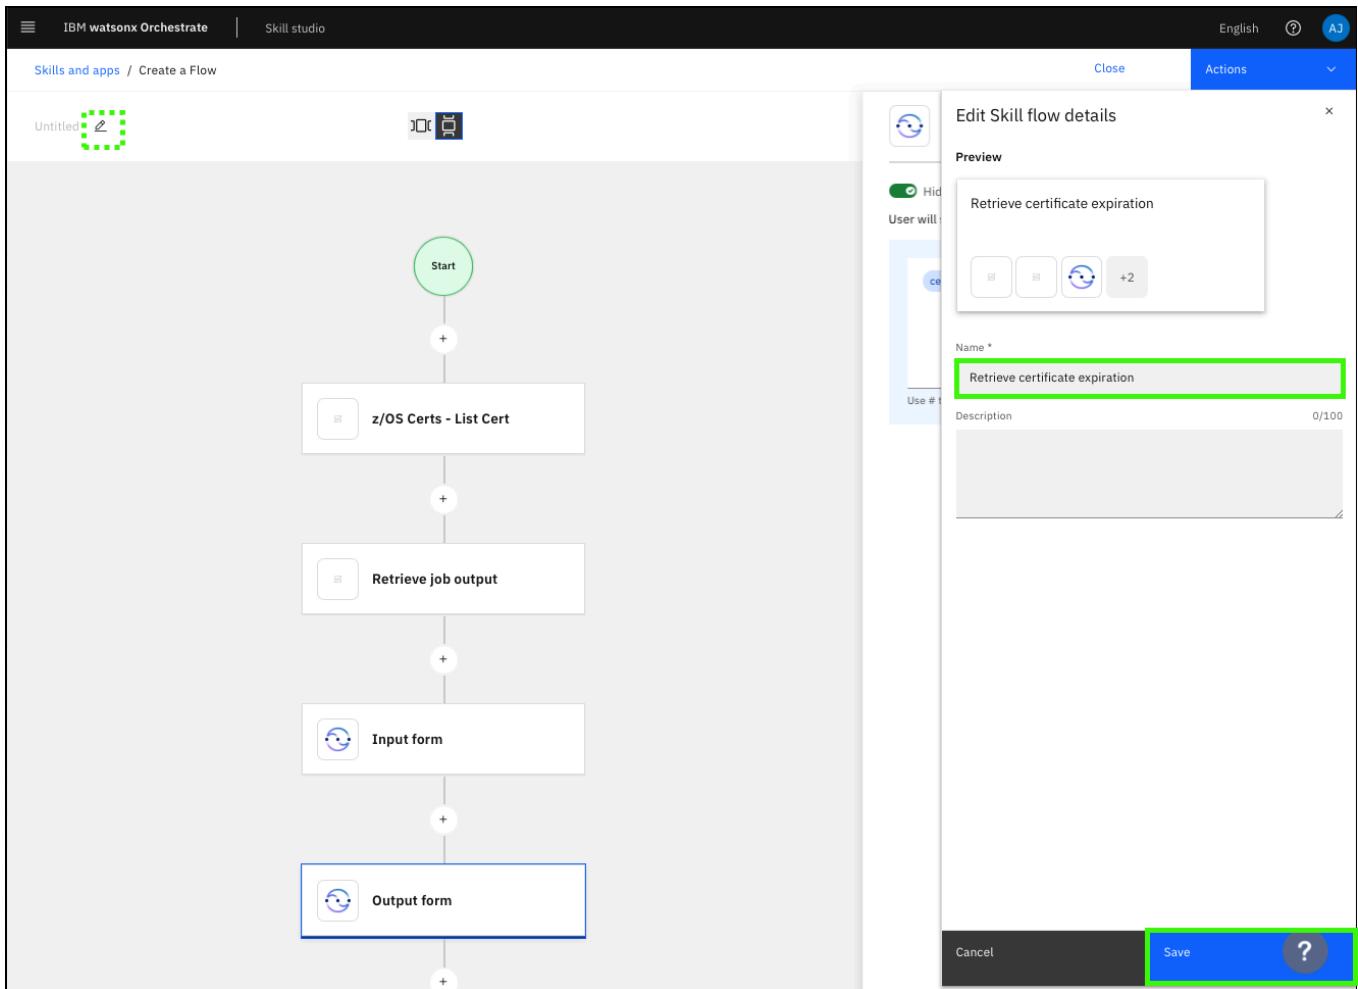

35. Click the **pencil** icon (✍).

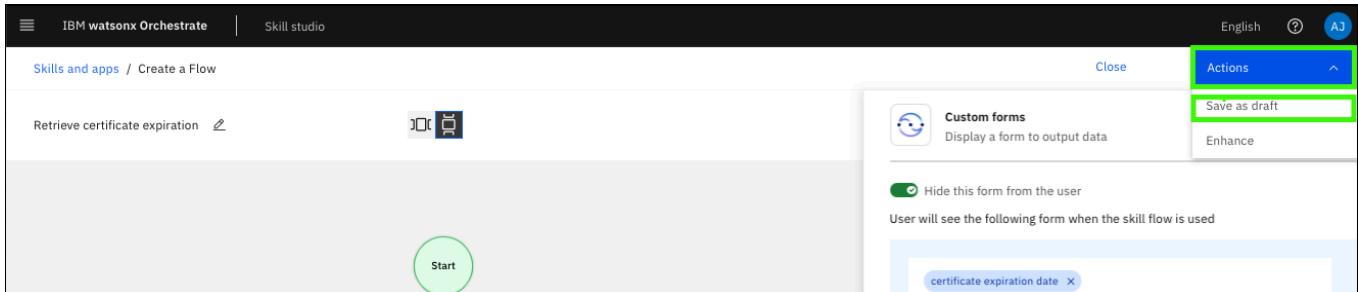

36. Enter **Retrieve certificate expiration** in the **Name** field and click **Save**.

Name:

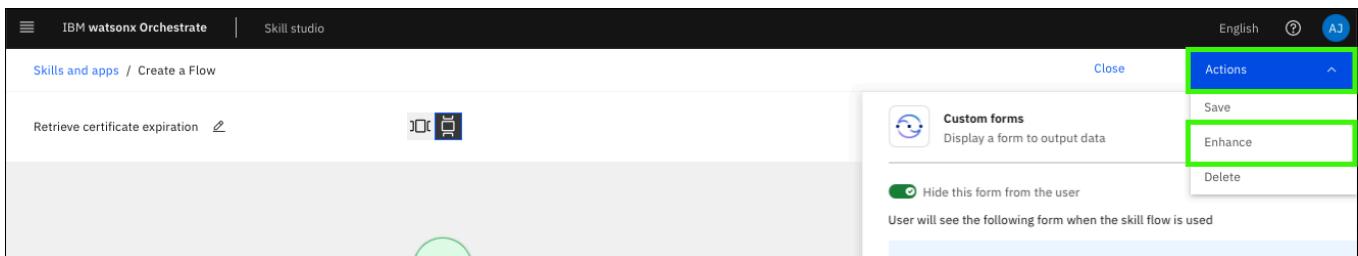

Retrieve certificate expiration

37. Click **Actions** and then click **Save as draft**.

38. Click **Actions** and then click **Enhance**.

39. Review the skill flow settings and click **Publish**.

The screenshot shows the 'Skill studio' interface for enhancing a skill. The top navigation bar includes 'IBM Watsonx Orchestrate', 'Skill studio', 'English', and a help icon. The main title is 'Enhance the “Retrieve certificate expiration” skill'. Below the title, a sub-header says 'Add details that will make people want to use this skill.' There are tabs for 'Name', 'Phrases', and 'Next best skills', with 'Name' being the active tab.

Name: Retrieve certificate expiration

App: Skill flows

Preview: Shows how the skill will look like in the catalog and skill set. Both preview boxes show the same content: 'Retrieve certificate expiration' with a small circular icon containing a smiley face.

Buttons at the bottom: Cancel, Publish (highlighted with a green border), Save as draft, and a question mark icon.

Congratulations! You've just created a new skill flow that accomplishes part of the use case – retrieving and displaying the expiration date of a z/OS certificate based on the certificate label the end-user provides. You will see this in action in the following sections.

In the next section, you will create one more simpler skill flow for the z/OS Certs – Search and Renew skill you previously imported. Once this additional skill flow is created, you will add both skill flows as skill-based actions which can be called in a custom-built action to map inputs to the skill flows through natural conversation.

Create a skill flow for certificate renewal

The final step before configuring the assistant with actions is to create a skill flow for renewing certificates. Recall the z/OS Certs – Search and Renew automation imported from Ansible Automation Platform earlier. The skill flow you create next will comprise of that single skill. There is no need to return the output. After the automation is triggered, the user can verify the new expiration date by running the retrieve certificate expiration date flow.

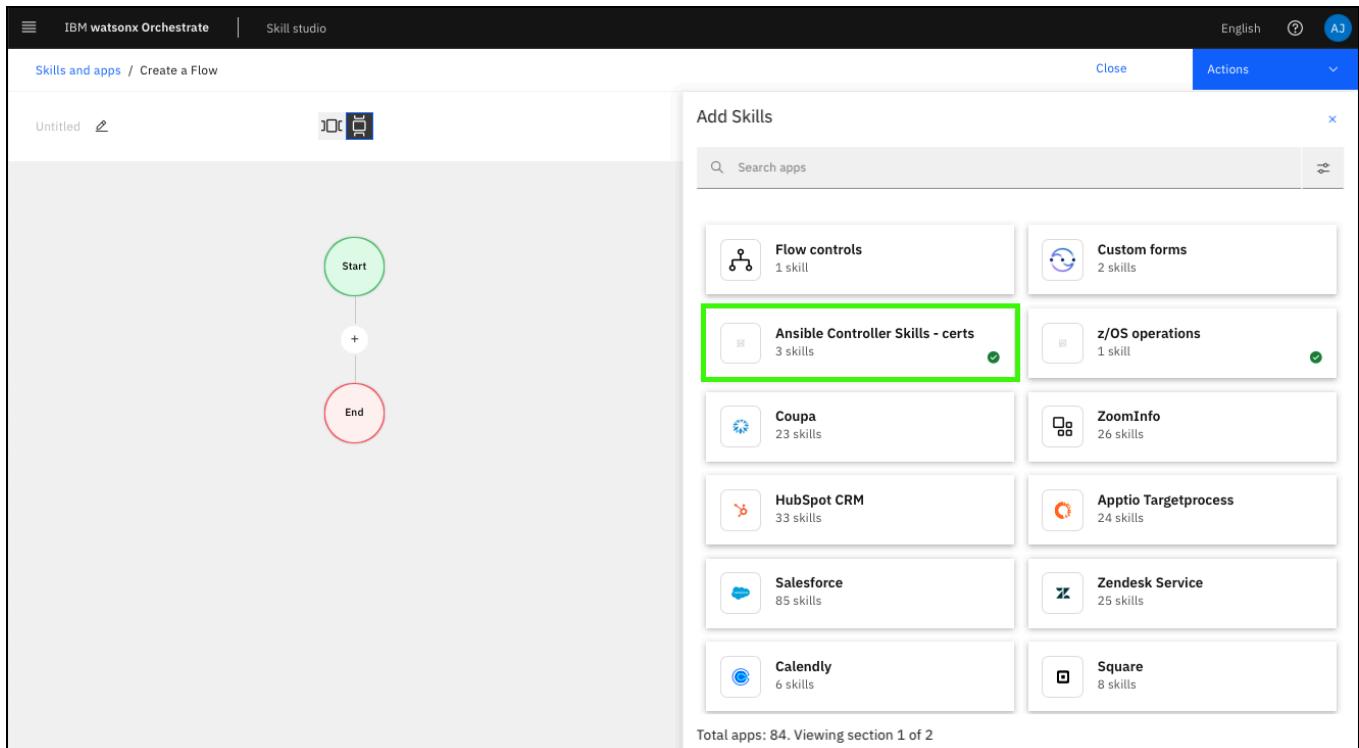

1. In **Skill studio**, click **Create** and then click **Skill flow**.

2. Click the + icon.

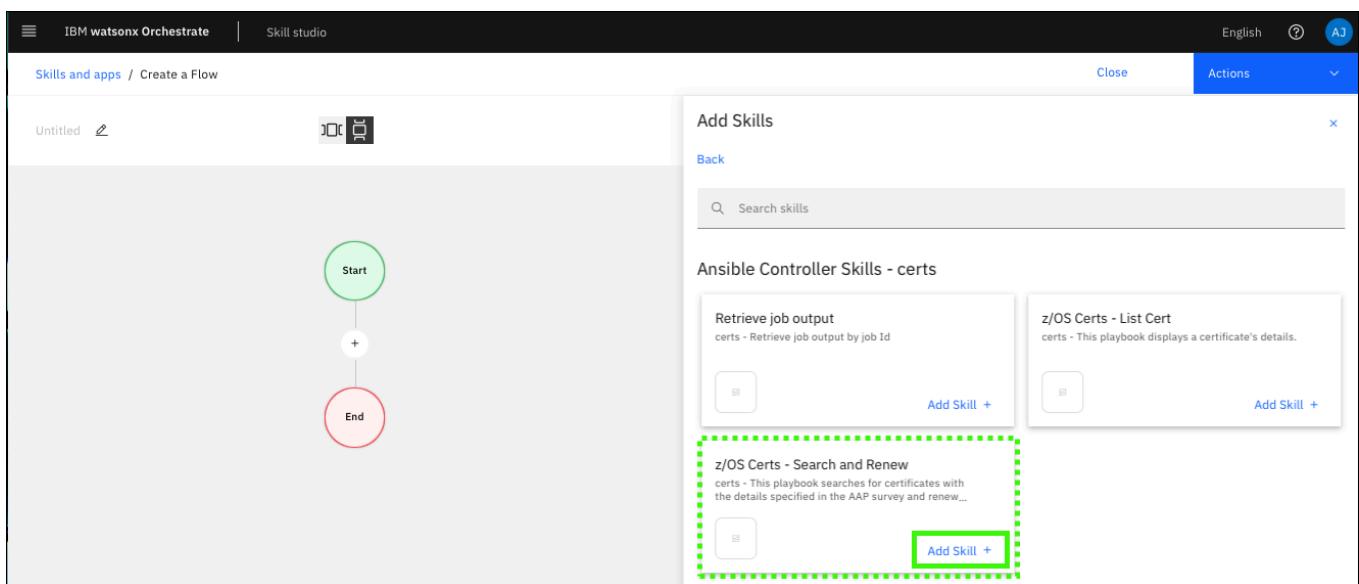

3. Click the certs app.

Search on certs if you do not see the tile for your app.

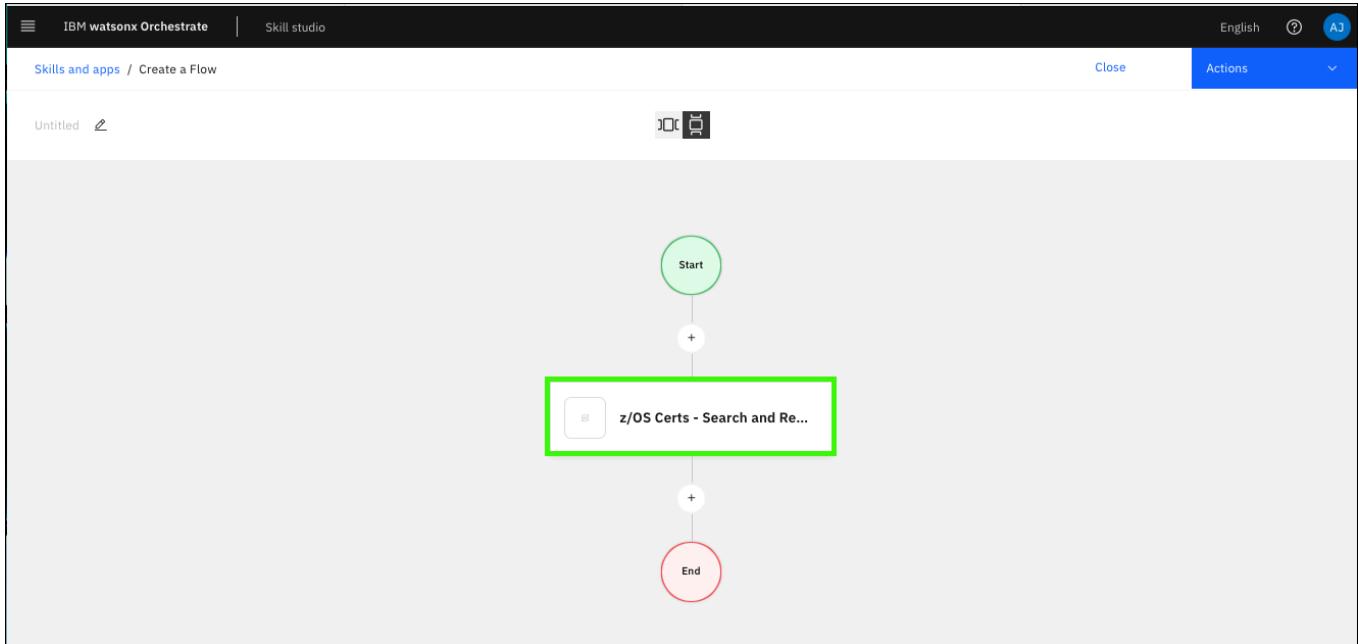

4. Click Add Skill + in the z/OS Certs - Search and Renew tile.

As mentioned, there is no need to return the ansible job output of this skill when it's executed. The **z/OS Certs - Search and Renew** is used to set default values for some of the inputs. For the purpose of this use case, we can assume that the Security Administrator will be renewing their SITE certificates which are signed with a previously generated Certificate Authority.

5. Click the z/OS Certs - Search and Renew skill.

6. Click Input.

Ansible Controller Skills - certs

certs - This playbook searches for certificates with the details specified in the AAP survey and renews them.

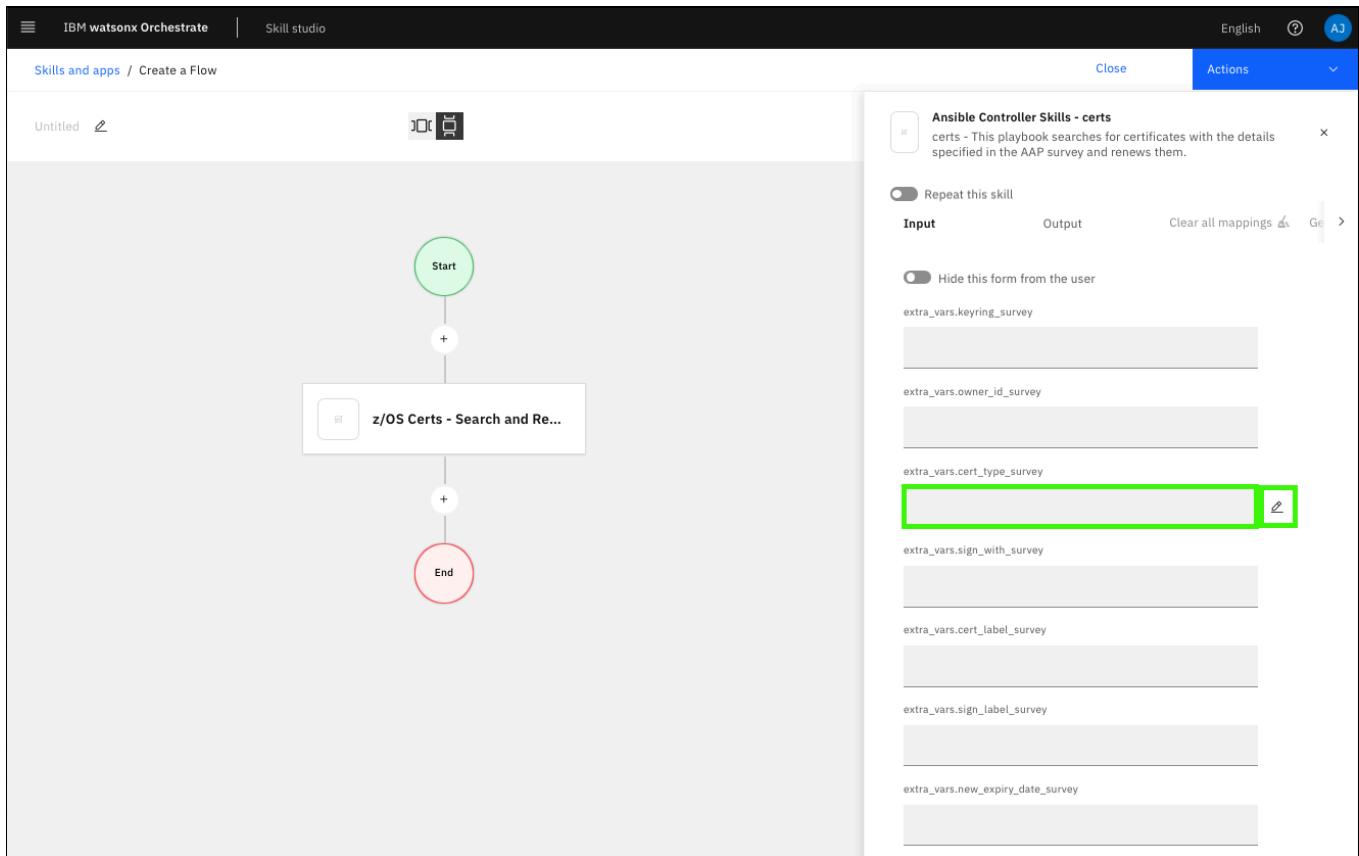

Repeat this skill

Add the skill flows to the assistant

Next, create 2 skill-based actions using the skill flows. This enables the ability to call the skill flow as a sub-action within a new custom-built action. For this use case, you will create 2 skill-based actions using your previously created skill flows:

- Retrieve certificate expiration – maps the user prompted certificate label as input and extracts the certificate expiration date from the Ansible job's output.
- Cert Renewal skill flow – maps the user prompted certificate label and new expiration date as input and executes the Search and Renew Ansible job to extend the expiration date of the certificate.

Once the 2 skill flows are added as skill-based actions, integrate the actions into a custom-built action that defines the entire conversation flow. The flow assists the Security Administrator with the certificate renewal process.

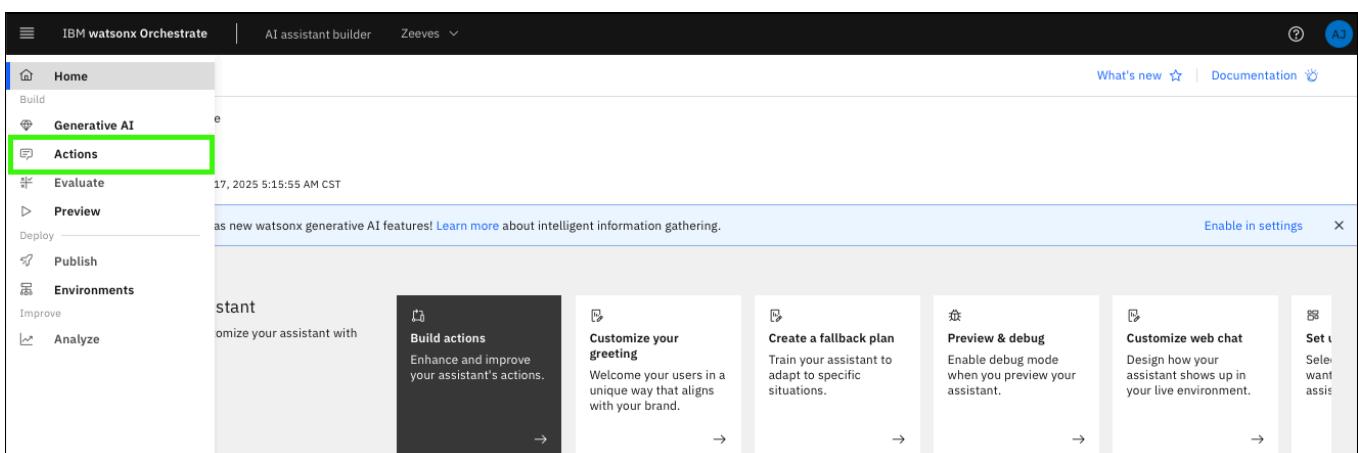

1. Open AI assistant builder in watsonx Orchestrate.

The screenshot shows the IBM Watsonx Orchestrate interface. The left sidebar has sections for Chat, Skill sets, Skill catalog, BUILD (with AI assistant builder selected and highlighted with a green box), and ADMINISTER (Access management). The main area is titled "Skill studio" and contains a sub-header "Selects to build and manage skill". A "Create" button is at the top right. Below it is a "Configure prebuilt skills" button. A table lists three skill flows:

Step in the process	Status	Skill type	Author	Last edited
Ready to use	✓ Published	Skill flow	andrew@jones-tx.com	January 20 2025
Ready to use	✓ Published	Skill flow	andrew@jones-tx.com	January 19 2025
Ready to use	✓ Published	Imported	andrew@jones-tx.com	January 19 2025

2. Click Actions.

The screenshot shows the AI assistant builder interface. The left sidebar has sections for Home, Build (with Generative AI selected and highlighted with a green box), Actions (selected and highlighted with a green box), Evaluate, Preview, Publish, Environments, Improve, and Analyze. The main area has a message about new generative AI features. Below it are several cards:

- Build actions**: Enhance and improve your assistant's actions.
- Customize your greeting**: Welcome your users in a unique way that aligns with your brand.
- Create a fallback plan**: Train your assistant to adapt to specific situations.
- Preview & debug**: Enable debug mode when you preview your assistant.
- Customize web chat**: Design how your assistant shows up in your live environment.
- Set up**: Select what assistant you want to use.

3. Click New action+.

Actions

Created by you /

Name	Last edited	Examples count	Steps count	Status

certs - This playbook displays a certificate's details	z/OS IPL Information	Run z/OS gather facts and retrieve the output.	

6. Click Cancel on the New action dialog.

For this use case, the action is triggered from a custom-built action. To prevent the skill flow from being executed as the skill-based action, do not enter any example phrases.

Add example phrases:

Enter phrases that a customer types or says to start the conversation about a specific topic. These phrases determine the task, problem, or question your customer has.

The more phrases you enter, the better your assistant can recognize what the customer wants.

Enter phrases your customer might use to start this action Total: 0

Example: I want to pay my credit card bill.

New action

What does your customer say to start this interaction?

Example: I want to pay my credit card bill.

Cancel Save

7. Click **x** to close the **Retrieve certificate expiration** skill.

Add example phrases:

Enter phrases that a customer types or says to start the conversation about a specific topic. These phrases determine the task, problem, or question your customer has.

The more phrases you enter, the better your assistant can recognize what the customer wants.

Enter phrases your customer might use to start this action Total: 0

Example: I want to pay my credit card bill.

8. Repeat steps 3 - 7 to create a skill-based action for the **Cert Renewal skill flow**.

This action is also triggered from a custom-built action. Do not enter any example phrases.

9. Verify both skill-based actions are available.

Name	Last edited	Examples count	Steps count	Status
z/OS IPL Information	a day ago	0	3	✓
Zeeves-gather-facts-flow	3 days ago	1	0	✓
Retrieve IPL information	a day ago	1	3	✓
Retrieve certificate expiration	13 minutes ago	0	3	✓
Cert Renewal skill flow	a few seconds ago	0	7	✓

Create a custom-built action for SSL Certificate Renewal

Next, create a custom-built action that executes the new skill-based actions as sub-actions. Configure the custom-built action to enable a natural conversation with the assistant, gather relevant details from the end-user, and map those details to the action inputs.

Recall the use case in scope for this section – demonstrate how an assistant can automate the SSL Certificate Renewal process and guide users through the process in a natural conversation.

1. Click New action +.

Name	Last edited	Examples count	Steps count	Status
<input type="checkbox"/> z/OS IPL Information	a day ago	0	3	Green
<input type="checkbox"/> Zeeves-gather-facts-flow	3 days ago	1	0	Green
<input type="checkbox"/> Retrieve IPL Information	a day ago	1	3	Green
<input type="checkbox"/> Retrieve certificate expiration	13 minutes ago	0	3	Green
<input type="checkbox"/> Cert Renewal skill flow	a few seconds ago	0	7	Green

2. Click Custom-built-action.

AI-guided action
Configure AI to generate responses based on specific use cases.
Beta

Skill-based action
Build an action that helps perform a task.

Custom-built action
Design your own action step-by-step.
Not sure how to start? Try adding pre-built action templates.

3. Enter `z/OS certificate expires soon` and then click Save.

What does your customer say to start this interaction:

```
z/OS certificate expires soon
```

The screenshot shows the AI assistant builder interface. On the left, there's a sidebar with 'Customer starts with:' containing the example phrase 'I want to pay my credit card bill.' Below it is a 'Conversation steps' section with one step labeled '1 Continue to next step'. On the right, there's a 'Add example phrases:' section with a text input field containing 'Example: I want to pay my credit card bill.' A 'Total: 0' label is next to it. A modal window titled 'New action' is open, showing the input field with 'z/OS certificate expires soon' and a 'Save' button at the bottom.

The conversational search capability provided by watsonx Assistant for Z can provide step-by-step guidance for determining certificate expiration and renewing certificates, and is grounded on Z domain-specific knowledge. In the first step to be taken when the end-user prompts the assistant with `z/OS certificate expires soon`, configure the assistant to use conversational search to provide a response on the process and the ability to automate the process.

4. Click the **And then** drop down and select **Search for the answer**.

The screenshot shows the AI assistant builder interface with a conversation step highlighted by a green dashed box. The 'Step 1' section shows 'Is taken without conditions'. The 'Assistant says' section has a text input field with 'For example: What size do you want to order?'. Below it is a 'Define customer response' section. The 'And then' dropdown menu is open, showing options: 'Continue to next step' (highlighted with a green box), 'Re-ask previous step(s)', 'Go to a subaction', 'Use an extension', 'Search for the answer' (highlighted with a green box), 'Connect to agent', and 'End the action'.

The result is that any time the user's input matches the example phrase `z/OS certificate expires soon`, the first step taken is for the assistant to use conversational search and provide a response to their original question.

Like in the IPL Information scenario, add a custom search query so when conversational search is executed in the first conversation step, the query being used is hard-coded and is not necessarily what the end-user inputted.

5. Click **Edit settings**.

6. Enter the following prompt to be used in the **Custom search query** field and then click **Apply**.

Custom search query:

```
My z/OS certificate is going to expire soon. How do I retrieve the expiration date for my certificate?
```

The screenshot shows the IBM Watsonx Orchestrate interface. A modal window titled "Search for the answer" is open over the main editor area. The modal has tabs for "Search configuration" (which is selected) and "After generation". Under "Search configuration", there is a section for "Custom search query (Optional)" containing the text "My z/OS certificate is going to expire soon. How do I retrieve the expiration date for my certificate?". Below this is a "Custom results filter" section with two options: "Use default" (selected) and "Set new filter". The "Use default" option has a note: "The default filter is set in the search integration settings page." The "Apply" button at the bottom of the modal is highlighted with a green border.

7. Click Next step+.

The screenshot shows the IBM Watsonx Orchestrate interface with the configuration for Step 1. The "Assistant says" section contains the text "For example: What size do you want to order?". Below it, the "Define customer response" dropdown is set to "Search for the answer". The "And then" section shows a "Search for the answer" configuration with a custom query: "My z/OS certificate is going to expire soon. How do I retrieve the expiration date for my certificate?". The "Edit settings" button is visible. At the bottom left, there is a "New step +" button, and at the bottom right, a "Preview" button.

8. Enter the following response in the **Assistant says** field.

Assistant says:

Would you like to run the skill to retrieve your certificate's expiration date?

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. In the top navigation bar, 'IBM Watsonx Orchestrate' and 'AI assistant builder' are visible, along with a dropdown for 'Zeeves'. The main area is titled 'z/OS certificate expires soon'. On the left, under 'Conversation steps', there are two steps: Step 1 (empty) and Step 2, which contains the text 'Would you like to run the skill to retrieve your certificate's expiration date?'. Below this, there are buttons for 'Continue to next step', 'Edit', and 'Delete'. In the center, 'Step 2' is selected, and the 'Is taken' dropdown is set to 'without conditions'. To the right, the 'Assistant says' field contains the same question, with a green box highlighting it. Below this, the 'Define customer response' dropdown is open, showing options like 'System', 'Confirmation', 'Free text', etc. The 'Confirmation' option is highlighted with a green box. At the bottom, the 'And then' section has a 'Continue to next step' button.

9. Click the **Define customer response** option list and select **Confirmation**.

The **Confirmation** option prompts the user to select **Yes** or **No**.

This screenshot continues from the previous one, focusing on the 'Define customer response' dropdown in the 'Assistant says' section. The 'Confirmation' option is now selected and highlighted with a green box. The 'Confirmation' panel is expanded, showing the sub-options 'As buttons' and 'Yes' and 'No' buttons. The other options in the list ('System', 'Free text', 'Regex', 'Number', 'Date', 'Time', 'Saved') are also visible but not selected.

10. Click **Next step +**.

The screenshot shows the IBM Watsonx Orchestrate interface. In the top navigation bar, 'IBM watsonx Orchestrate' and 'AI assistant builder' are visible, along with a dropdown for 'Zeeves'. On the right, there are icons for help, settings, and a search bar. The main area is titled 'z/OS certificate expires soon'. It shows a conversation flow with two steps:

- Step 1:** 'Customer starts with: z/OS certificate expires soon'. Below it, 'Conversation steps' show step 1 with 'This step has no content' and step 2 with 'Would you like to run the skill to retrieve your certificate's expiration date?'. A 'Confirmation' button is present.
- Step 2:** 'Is taken' dropdown set to 'without conditions'. An 'Assistant says' field contains the message 'Would you like to run the skill to retrieve your certificate's expiration date?'. Below it, a green dashed box highlights the 'Yes' and 'No' buttons and the 'View response' and 'Edit validation' buttons. The 'And then' section shows a green dashed box around the 'Continue to next step' button.

At the bottom left is a 'New step +' button, and at the bottom right are 'Preview' and 'Next' buttons.

11. Click the **Is taken** option list and select **with conditions**.

This step handles the flow when the user selects **Yes** in the previous step, indicating that want to run the skill to retrieve the certificate's expiration date. To run the **Retrieve certificate expiration action** created earlier, the assistant needs the certificate label. This label is mapped as input to the skill.

The screenshot shows the continuation of the AI assistant builder. In the 'Step 3' section, the 'Is taken' dropdown is open, showing three options: 'without conditions' (highlighted in green), 'without conditions' (disabled), and 'with conditions' (highlighted in green). The 'Assistant says' field contains the message 'For example: Please select from the following options:' followed by a dropdown menu labeled 'Define customer response'. The 'And then' section shows a green dashed box around the 'Continue to next step' button.

12. Enter the following text in the **Assistant says** field.

Assistant says:

What is your certificate label?

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, a sidebar displays 'Conversation steps' with three steps: 1. 'This step has no content' (with a search bar), 2. 'Would you like to run the skill to retrieve your certificate's expiration date?' (with a 'Confirmation' button), and 3. 'What is your certificate label?' (with a 'Continue to next step' button). Step 3 is highlighted with a green dashed box. On the right, the 'Step 3' configuration panel is open. It shows 'Is taken' with 'with conditions' selected. A condition is defined: 'If All of this is true:' followed by '2. Would you like to r... is Yes'. Below this, there is a 'New condition group +' button. Under 'Assistant says', the text 'What is your certificate label?' is displayed in a text editor with various rich text options. Below this, a dropdown menu shows 'Define customer response' selected. At the bottom, there is an 'And then' section with a 'Continue to next step' button.

13. Click the **Define customer response** drop-down list and select **Free text**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. On the left, a sidebar displays 'z/OS certificate expires soon' and 'Conversation steps'. Step 1 is a search step with 'Search for the answer'. Step 2 is a confirmation step with 'Would you like to run the skill to retrieve your certificate's expiration date?' and a 'Confirmation' button. Step 3 is a free-text input step with the question 'What is your certificate label?'. A green dashed box highlights this step. Below the steps, the 'Step 3' configuration panel is visible, showing 'Is taken with conditions' and a condition '2. Would you like to r... is Yes'. The 'Assistant says' section contains the question 'What is your certificate label?'. A modal window titled 'Define customer response' is open, showing options for 'Free text' (selected), 'Confirmation', 'Regex', 'Number', 'Date', 'Time', and 'Saved'. The 'Free text' section includes an 'As text' input field containing 'My street is Main Street'. A 'Preview' button is at the bottom right of the modal.

14. Click **Next step+**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. On the left, there's a sidebar titled "z/OS certificate expires soon" under "Customer starts with: z/OS certificate expires soon". Below it, "Conversation steps" are listed:

- Step 1: "This step has no content".
- Step 2: "Would you like to run the skill to retrieve your certificate's expiration date?". It includes a "Confirmation" button and a link to "Continue to next step".
- Step 3: "What is your certificate label?". It includes a "Try Free text" button and a link to "Continue to next step".

Step 3 Details:

- Is taken:** with conditions
- Conditions:** If All of this is true:
 - 2. Would you like to r... is Yes
- Assistant says:**
 - What is your certificate label?
 - User enters free text
- And then:**
 - ↓ Continue to next step

15. Click the **Is taken** option list and select **with conditions**.

After the user enters the certificate label as free text, the next step is to run the **Retrieve certificate expiration** skill-based action created earlier. To do so, map the user input to the skill flow and retrieve the expiration date for that certificate.

z/OS certificate expires soon

Customer starts with:
z/OS certificate expires soon

Conversation steps

- This step has no content
- Would you like to run the skill to retrieve your certificate's expiration date?
Confirmation
↓ Continue to next step
- 2 is Yes
What is your certificate label?
Free text
↓ Continue to next step
- This step has no content
↓ Continue to next step

Step 4

Is taken: without conditions

Set variable values *fx*

Assistant says:

For example: What type of transfer would you like to make?

Define customer response

And then:

↓ Continue to next step

16. Click the **And then** option list and click **Go to a subaction**.

Notice the default condition validates the free text is defined from the previous step.

z/OS certificate expires soon

Customer starts with:
z/OS certificate expires soon

Conversation steps

- This step has no content
- Would you like to run the skill to retrieve your certificate's expiration date?
Confirmation
↓ Continue to next step
- 2 is Yes
What is your certificate label?
Free text
↓ Continue to next step
- 3 is Defined
This step has no content
↓ Continue to next step

Step 4

Is taken: with conditions

Set variable values *fx*

Conditions

If All of this is true:

- 3. What is your certifi... is defined

and Add condition +

New condition group +

Assistant says

For example: What type of transfer would you like to make?

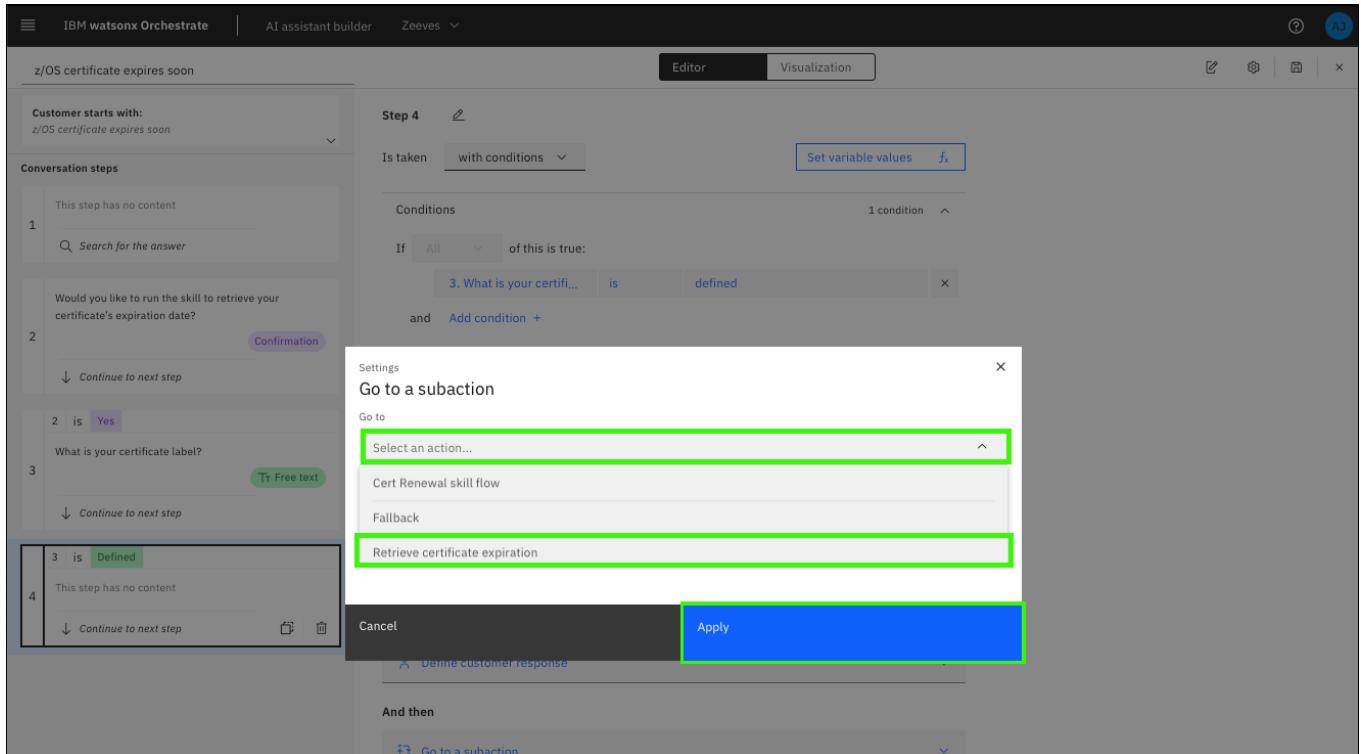

Define customer response

And then

↓ Continue to next step

Continue to next step
Re-ask previous step(s)
Go to a subaction
Switch conversation flow to another action to perform a certain task
Use an extension
Search for the answer
Connect to agent
End the action

17. Click the (a) Go to option list, select the (b) Retrieve certificate expiration skill-based action, and then click (c) Apply.

18. Click Edit passed values.

To execute the **Retrieve certificate expiration** subaction using the users certificate label, the passed value needs to be modified.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The main area displays a conversation flow with four steps:

- Customer starts with: z/OS certificate expires soon
- Conversation steps: This step has no content.
- Would you like to run the skill to retrieve your certificate's expiration date? (Confirmation)
- What is your certificate label? (Free text)

Step 4 configuration:

- Is taken:** with conditions
- Conditions:**
 - If All of this is true:
 - 3. What is your certifi... is defined
 - and Add condition +
 - New condition group +
- Assistant says:** (Text input field with placeholder: For example: What type of transfer would you like to make?)
- And then:**
 - Go to a subaction: Go to a subaction
 - Goes to action: Retrieve certificate expiration
 - Pass values
 - Upon return: Continue

Buttons at the bottom: New step +, Preview, and a blue button.

19. Click Set new value + and then select extra_vars.cert_label_survey.

The screenshot shows the 'Edit passed values' dialog box from the AI assistant builder. It contains the following information:

- Passed values:** Edit passed values
- Configure how your skill-based action leverages and stores information in assistant variables.**
- Variables are not private if they are shared with Skill Studio.**
- Edit variable values:** Response behavior
- Set new value +** (highlighted with a green box)
- All variables:**
 - 1. extra_vars.cert_label_survey (highlighted with a green box)
 - 2. extra_vars.cert_type_survey
 - 3. extra_vars.owner_id_survey

Buttons at the bottom: Cancel, Apply, and a blue button.

20. In the To field, select **Action step variables**, and then select **What is your certificate label?**.

The screenshot shows the IBM Watsonx Assistant Editor interface. A modal window is open for 'Step 4'. In the 'To' field dropdown, the option 'Action step variables' is highlighted with a yellow circle. Below it, the variable '3. What is your certificate label?' is selected. The 'Edit variable values' tab is active.

21. Click **Apply**.

The screenshot shows the IBM Watsonx Assistant Editor interface. A modal window is open for 'Step 4'. In the 'To' field dropdown, the option 'Action step variables' is highlighted with a yellow circle. Below it, the variable '3. What is your certificate label?' is selected. The 'Edit variable values' tab is active. The 'Apply' button at the bottom right of the modal is highlighted with a green rectangle.

22. Click **Next step +**.

The screenshot shows the IBM Watsonx Orchestrate interface. At the top, it says "z/OS certificate expires soon". Below this, there's a "Conversation steps" section with four steps numbered 1 to 4. Step 1: "Customer starts with: z/OS certificate expires soon". Step 2: "Would you like to run the skill to retrieve your certificate's expiration date?". Step 3: "What is your certificate label?". Step 4: "This step has no content". A "New step +" button is at the bottom left.

Step 4 Configuration:

- Is taken:** "with conditions" (highlighted)
- Conditions:**
 - If All of this is true:
 - 3. What is your certifi... is defined
 - and Add condition +
- Assistant says:** "For example: What type of transfer would you like to make?"
- And then:**
 - Go to a subaction: "Retrieve certificate expiration"
 - Goes to action: "Retrieve certificate expiration"
 - Pass values: "1. extra_vars.cert_label_survey"
 - Upon return: "Continue"

23. Click the **Is taken** option list and select **with conditions**.

In the previous step, you configured the assistant to run the Retrieve certificate expiration subaction you created, passing the certificate label the user inputted to the skills inputs. Recall when the **Retrieve certificate expiration** skill flow was created, the output form at the end of the skill flow was hidden. That form contained the expiration date. As a result, nothing is returned when executing the subaction in the previous step. Now, configure the custom-action to provide that output as a response.

The screenshot shows the IBM Watsonx Orchestrator AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrator', 'AI assistant builder', 'Zeeves', and tabs for 'Editor' and 'Visualization'. The main area displays a conversation flow with five steps:

- Step 1:** Customer starts with: z/OS certificate expires soon.
- Step 2:** Conversation steps: Would you like to run the skill to retrieve your certificate's expiration date? (Confirmation)
- Step 3:** Conversation steps: What is your certificate label? (Free text)
- Step 4:** Conversation steps: This step has no content. Go to subsection: Retrieve certificate.
- Step 5:** Conversation steps: This step has no content. Continue to next step.

Step 5 Configuration:

- Is taken:** A dropdown menu is open, showing options: 'without conditions' (selected), 'with conditions', and 'with conditions' again.
- Assistant says:** A rich text editor with placeholder text: 'For example: What size do you want to order?' Below it is a 'Define customer response' section.
- And then:** A dropdown menu is open, showing 'Continue to next step'.

24. Enter the following text in the **Assistant says** field.

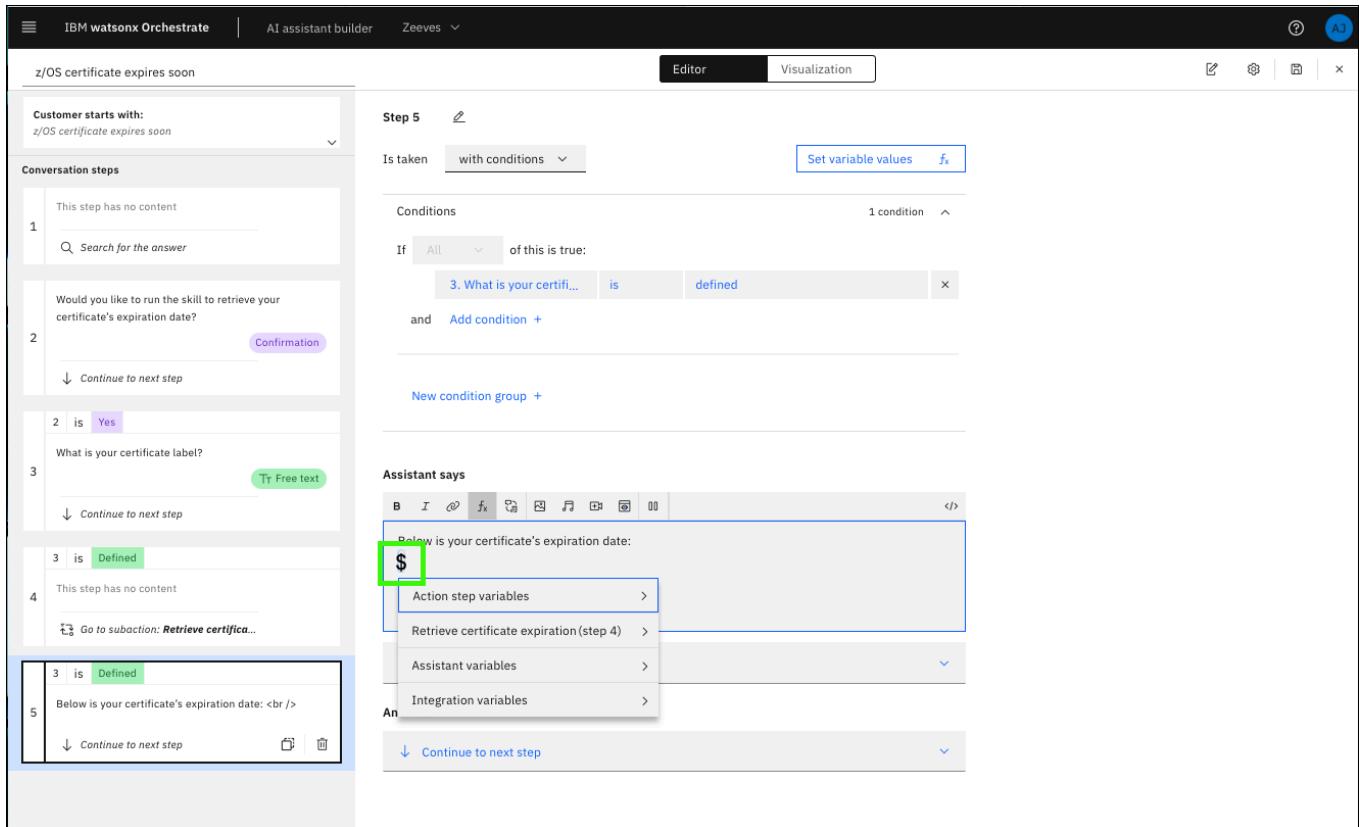

Assistant says:

Below is your certificate's expiration date:

The screenshot shows the same interface as above, but with the configuration for Step 5 highlighted by a green dashed box. The 'Is taken' dropdown now shows 'with conditions' selected. The 'Conditions' section shows a single condition: 'If All of this is true: 3. What is your certifi... is defined'. The 'Assistant says' field contains the text: 'Below is your certificate's expiration date:'.

25. While still in the **Assistant says** field, press **return** and then type **\$**.

 The **\$** is a special key that lists available functions. The image below is edited to show you must type the **\$**, but it will not be displayed on your screen.

The screenshot shows the IBM Watsonx Orchestrator interface. On the left, there's a sidebar titled "z/OS certificate expires soon" with "Conversation steps" numbered 1 through 5. Step 1: "Customer starts with: z/OS certificate expires soon". Step 2: "Would you like to run the skill to retrieve your certificate's expiration date?". Step 3: "What is your certificate label?". Step 4: "This step has no content" with a link "Go to subaction: Retrieve certificate...". Step 5: "Below is your certificate's expiration date:
". The main panel shows "Step 5" configuration under "Is taken with conditions". A condition is defined: "If All of this is true: 3. What is your certifi... is defined" and "and Add condition +". Below this, the "Assistant says" field contains the text "Below is your certificate's expiration date:" followed by the special character "\$". This "\$" character is highlighted with a green rectangular box. To the right of the "\$" are dropdown menus for "Action step variables", "Retrieve certificate expiration (step 4)", "Assistant variables", and "Integration variables". At the bottom of the "Assistant says" field, there is a "Continue to next step" button.

26. Click **Retrieve certificate expiration (step 4)** and then click **Retrieve certificate expiration result variable**.

The screenshot shows the AI assistant builder interface with the following details:

- Customer starts with:** z/OS certificate expires soon
- Conversation steps:**
 - This step has no content
 - Q Search for the answer
 - Would you like to run the skill to retrieve your certificate's expiration date?
↓ Continue to next step
 - 2 is Yes
 - What is your certificate label?
↓ Continue to next step
 - 3 is Defined
 - This step has no content
Go to subaction: Retrieve certificate expiration (step 4)
 - 5 Below is your certificate's expiration date:

↓ Continue to next step
- Step 5:**
 - Is taken with conditions
 - Conditions: If All of this is true:
 - 3. What is your certifi... is defined
 - and Add condition +
 - New condition group +
- Assistant says:**
 - Action step variables > (highlighted with a yellow circle)
 - Retrieve certificate expiration (step 4) (highlighted with a yellow circle)
 - Assistant variables >
 - Integration variables >
- And then:**
 - ↓ Continue to next step

27. Review the **Assistant says** field and then click **Save** (💾).

The screenshot shows the AI assistant builder interface after saving the configuration. The changes are reflected in the 'Assistant says' field:

- Customer starts with:** z/OS certificate expires soon
- Conversation steps:**
 - This step has no content
 - Q Search for the answer
 - Would you like to run the skill to retrieve your certificate's expiration date?
↓ Continue to next step
 - 2 is Yes
 - What is your certificate label?
↓ Continue to next step
 - 3 is Defined
 - This step has no content
Go to subaction: Retrieve certificate expiration (step 4)
 - 5 Below is your certificate's expiration date:
1 2 3 4. Retrieve certificate expiration re...
↓ Continue to next step
- Step 5:**
 - Is taken with conditions
 - Conditions: If All of this is true:
 - 3. What is your certifi... is defined
 - and Add condition +
 - New condition group +
- Assistant says:**
 - 1 2 3 4. Retrieve certificate expiration re... (highlighted with a green dashed box)
 - Define customer response
- And then:**
 - ↓ Continue to next step

Test the **z/OS certificate expires soon** custom-built skill

Before completing the use case, test the **z/OS certificate expires soon** custom-built skill using the **DEMOCERT** certificate created earlier.

1. Click **Preview**.

The screenshot shows the IBM Watsonx Orchestrate interface with the 'z/OS certificate expires soon' skill selected. The 'Editor' tab is active. On the left, the conversation steps are listed:

- Customer starts with: z/OS certificate expires soon
- This step has no content
- Would you like to run the skill to retrieve your certificate's expiration date?
- What is your certificate label?
- Below is your certificate's expiration date: **1 2 3 Step 4**

Step 5 is currently being configured with the condition "Is taken with conditions". A condition is defined: "If All of this is true: 3. What is your certifi... is defined". The 'Assistant says' section contains the response: "Below is your certificate's expiration date: 1 2 3 Step 4. Retrieve certificate expiration re...". Below it, "Define customer response" and "And then" sections are present. At the bottom right, the 'Preview' button is highlighted with a green box.

2. Enter the following prompt in the preview.

Prompt:

My z/OS certificate is going to expire soon. How do I retrieve the expiration date for my certificate?

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main workspace is divided into several sections:

- Left Panel (Conversation steps):** A vertical list of steps numbered 1 to 5.
 - Step 1:** 'Customer starts with: z/OS certificate expires soon'.
 - Step 2:** 'Would you like to run the skill to retrieve your certificate's expiration date?' with a 'Confirmation' button.
 - Step 3:** 'What is your certificate label?' with a 'Free text' input field.
 - Step 4:** 'This step has no content'.
 - Step 5:** '3 is Defined' (highlighted with a green box). Below it, the text 'Below is your certificate's expiration date:' and a link '1 2 3 Step 4'.
- Top Bar:** Includes tabs for 'Editor' (selected) and 'Visualization', along with icons for edit, settings, and export.
- Step 5 Editor:** Shows the configuration for Step 5:
 - 'Is taken' dropdown set to 'with conditions'.
 - 'Set variable values' button.
 - Conditions:** 'If All of this is true:'
 - Condition: '3. What is your certifi... is defined'
 - 'and' button to add more conditions.
 - 'New condition group' button.
- Assistant says:** Text area with rich text editor tools:
 - Text: 'Below is your certificate's expiration date:'.
 - Link: '1 2 3 Step 4'.
 - Section: 'Define customer response'.
 - Text: 'And then' followed by a 'Continue to next step' button.
- Preview:** A window showing a simulated customer interaction:
 - Profile picture and time: '7:55 AM'.
 - Text: 'Greet customer [default] _____'.
 - Text: 'Welcome, how can I assist you?'
 - Text area at the bottom: 'My z/OS certificate is going to expire soon. How do I retrieve the expiration date for my certificate?' (highlighted with a green box).
- Bottom Left:** 'New step' button.

3. Review the response and click **Yes**.

The assistant responds by calling Conversational search and returns a response using the Z RAG, displaying the RACDCERT command that can be used. The assistant then prompts Would you like to run the skill to retrieve?.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. On the left, a sidebar titled "z/OS certificate expires soon" lists "Conversation steps". Step 1: "Customer starts with: z/OS certificate expires soon". Step 2: "Would you like to run the skill to retrieve your certificate's expiration date?". Step 3: "What is your certificate label?". Step 4: "This step has no content". Step 5: "Below is your certificate's expiration date: 1 2 3 4. Retrieve certificate expiration re...". A "New step +" button is at the bottom. On the right, the "Editor" tab is active, showing "Step 5" with a condition "Is taken with conditions". The condition "3. What is your certifi... is defined" is selected. Below it, "Assistant says" contains the retrieved certificate expiration date. The "Preview" pane on the right shows a simulated conversation at 10:06 AM where the AI asks if the user wants to run a skill to retrieve the certificate's expiration date, with "Yes" and "No" buttons.

4. Review the response and enter DEMOCRT .

Prompt:

DEMOCRT

z/OS certificate expires soon

Step 5

Is taken **with conditions**

Conditions **1 condition**

If **All** of this is true:

3. What is your certifi... is defined

and **Add condition +**

New condition group **+**

Assistant says

Below is your certificate's expiration date:
1 [4. Retrieve certificate expiration date](#)

Define customer response

Would you like to run the skill to retrieve your certificate's expiration date?
 Yes No

You 10:07 AM
Yes

10:07 AM
z/OS certificate expires soon recognized
What is your certificate label?
DEMOCERT

The screenshot shows the IBM Watson Assistant Orchestrate interface. At the top, it displays 'z/OS certificate expires soon'. Below this, the 'Editor' tab is selected. The main area shows a conversation flow with five steps:

- Customer starts with: z/OS certificate expires soon
- Conversation steps: This step has no content.
- Would you like to run the skill to retrieve your certificate's expiration date? (Confirmation)
- What is your certificate label? (Free text)
- Below is your certificate's expiration date: (Step 4)

Step 5 is currently being configured with a condition: '3. What is your certifi... is defined'. The 'Assistant says' section contains a link to '4. Retrieve certificate expiration date'. A 'Define customer response' section is open, asking if the user wants to run the skill, with 'Yes' checked. A preview window on the right shows the conversation history up to step 5, with the 'DEMOCERT' response highlighted in green.

5. Click **Apply**.

The screenshot shows the IBM Watsonx Orchestrate interface. At the top, it says "z/OS certificate expires soon". Below this, there's a "Conversation steps" section with five numbered steps:

- This step has no content.
- Would you like to run the skill to retrieve your certificate's expiration date? (with a "Confirmation" button).
- What is your certificate label? (with a "Try Free text" button).
- This step has no content.
- Below is your certificate's expiration date: [redacted] Step 4. (with a "Continue to next step" button).

On the right, under "Step 5", it says "Is taken with conditions". A condition is defined: "If All of this is true: 3. What is your certifi... is defined". There are buttons for "Set variable values" and "Add condition".

Below this, there's an "Assistant says" section with a rich text editor and a "Define customer response" dropdown. The "And then" section has a "Continue to next step" button.

A "Preview" window on the right shows a simulated conversation between a user ("You 10:17 AM") and an AI assistant ("DEMOCERT"). The user asks "What is your certificate label?", and the AI responds with "DEMOCERT". The AI then says "Below is your certificate's expiration date: 1 2 3 4. Retrieve certificate expiration res".

At the bottom right of the preview, there's a configuration window for a skill named "Retrieve certificate expiration" with an "id" field set to "20". Buttons for "Cancel" and "Apply" are visible.

6. Review the response.

If you see the following response (the date may differ), the custom-built skill ran successfully. The output of the skill flow was not the entire output of the z/OS Certs – List Cert Ansible job, but rather the certificate expiration date which was extracted from the full job output using the Regular Expression transformation.

Complete the custom-built skill to renew the certificate

Now that the custom-built action is working, add steps to include the certificate renewal process. After retrieving and displaying the user's certificate expiration date, ask the user if they want to renew the certificate, and if so, prompt for the new date and renew the certificate.

1. Click **Next step +**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main area is titled 'z/OS certificate expires soon'. On the left, a 'Conversation steps' panel lists five steps:

- Customer starts with: z/OS certificate expires soon
- This step has no content
- Would you like to run the skill to retrieve your certificate's expiration date? (Confirmation)
- What is your certificate label? (Free text)
- Below is your certificate's expiration date: Step 4 (id: 28)

Step 5 is currently being edited. The 'Is taken' dropdown is set to 'with conditions'. A condition is defined: 'If All of this is true: 3. What is your certifi... is defined'. The 'Assistant says' section contains the response: 'Below is your certificate's expiration date: 1 2 3 4. Retrieve certificate expiration res'. Below this, there are sections for 'Define customer response' and 'And then'.

The right side features a 'Preview' panel showing a conversational skill named 'Retrieve certificate expiration' with an ID of 28. The preview shows the bot saying 'Retrieve certificate expiration' at 10:18 AM. It also displays a note about returning to the 'z/OS certificate expires soon' action and a message indicating no additional steps are needed.

2. Click the **Is taken** option list and select **with conditions**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and various icons for help and settings. The main area displays a conversation flow titled 'z/OS certificate expires soon'. The flow consists of six steps:

- Customer starts with:** z/OS certificate expires soon
- Conversation steps:**
 - Step 1: This step has no content. It includes a 'Continue to next step' button.
 - Step 2: Would you like to run the skill to retrieve your certificate's expiration date? (Confirmation) - Includes a 'Continue to next step' button.
 - Step 3: 2 is Yes. What is your certificate label? (Free text) - Includes a 'Continue to next step' button.
 - Step 4: This step has no content. It includes a link to 'Go to subsection: Retrieve certificate' and a 'Continue to next step' button.
 - Step 5: 3 is Defined. Below is your certificate's expiration date: Step 4. It includes a 'Continue to next step' button.
 - Step 6: This step has no content. It includes a 'Continue to next step' button.

Step 1: A dropdown menu for 'Is taken' is open, showing options: 'without conditions' (selected), 'with conditions', and 'Set variable values'.

Assistant says: A rich text editor interface with a toolbar above it. The text area contains placeholder text: 'For example: Please select from the following options:'.

3. Enter the following text in teh **Assistant says** field.

Assistant says:

Would you like to renew your certificate?

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and various icons. The main area displays a conversation flow titled 'z/OS certificate expires soon'. The flow consists of six steps:

- Step 1:** 'Customer starts with: z/OS certificate expires soon'. This step is highlighted with a green dashed border.
- Step 2:** 'Would you like to renew your certificate?'. This step is also highlighted with a green dashed border.
- Step 3:** 'What is your certificate label?'. This step is highlighted with a green dashed border.
- Step 4:** 'This step has no content'.
- Step 5:** 'Below is your certificate's expiration date: Step 4'. This step is highlighted with a green dashed border.
- Step 6:** 'Would you like to renew your certificate?'. This step is highlighted with a green dashed border.

Step 1 Configuration:

- Is taken:** 'with conditions' (highlighted with a green dashed border).
- Conditions:** 'If All of this is true:'
1. Retrieve certificate is defined
and Add condition +
- Set variable values:** fx

Step 6 Configuration:

- Assistant says:** 'Would you like to renew your certificate?' (highlighted with a green box).
- Define customer response:** A dropdown menu showing 'Define customer response'.
- And then:** 'Continue to next step'

4. Click the **Define customer response** option list and select **Confirmation**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and various icons. The main area displays a conversation flow titled 'z/OS certificate expires soon'.

Conversation steps:

- Customer starts with: z/OS certificate expires soon
- Would you like to renew your certificate? (Is taken with conditions)
- Would you like to run the skill to retrieve your certificate's expiration date? (Confirmation)
- What is your certificate label? (Free text)
- This step has no content (Go to subaction: Retrieve certifica...)
- Below is your certificate's expiration date: Step 4 (Confirmation)
- Would you like to renew your certificate? (Confirmation)

Step 1: Is taken with conditions

Conditions: If All of this is true:

- 1 Retrieve certificate is defined

Assistant says:

Would you like to renew your certificate?

Define customer response:

System:

- Options
- Confirmation** (highlighted with a green box)
- Free text
- Regex
- Number
- Date
- Time

Confirmation: Enable customers to select from Yes or No response.

As buttons: Yes, No

5. Click **Next step +**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main area displays a conversation flow titled 'z/OS certificate expires soon'. The flow consists of several steps:

- Step 1:** 'Customer starts with: z/OS certificate expires soon' (highlighted in green). The 'Is taken' dropdown is set to 'with conditions'. A condition is defined: 'If All of this is true: 1 [Retrieve certificate] is defined'.
- Step 2:** 'Would you like to renew your certificate?' (Confirmation). The response 'Yes' leads to Step 3; 'No' leads to Step 4.
- Step 3:** 'What is your certificate label?' (Free text). Response 'Test' leads to Step 4.
- Step 4:** 'This step has no content' (Confirmation). It includes a link to 'Go to subaction: Retrieve certificate...'.
- Step 5:** 'Below is your certificate's expiration date: 123 Step 4' (Confirmation). Response 'Yes' leads to Step 6; 'No' leads to Step 4.
- Step 6:** 'Would you like to renew your certificate?' (Confirmation). The 'New step +' button is visible at the bottom right.

Assistant says: 'Would you like to renew your certificate?'. Below this, there is a green dashed box containing 'Yes' and 'No' buttons, and links for 'View response' and 'Edit validation'.

And then: 'Continue to next step'.

At the bottom right of the main area are 'Preview' and 'D' buttons.

6. Click the **Is taken** option list and select **with conditions**.

This step handles the flow in which the user select Yes in the previous step indicating they want to renew their expiring certificate. Before initiating the Cert Renewal skill flow action to automate this, the assistant first needs the new expiration date for the certificate.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The workflow consists of the following steps:

- Step 1:** A confirmation step asking "Would you like to renew your certificate?". It has a condition "with conditions" selected.
- Step 2:** A step with no content, labeled "This step has no content". It has a condition "without conditions" selected.
- Step 3:** A confirmation step asking "Would you like to run the skill to retrieve your certificate's expiration date?". It has a condition "with conditions" selected.
- Step 4:** A step where the user is asked "What is your certificate label?", with a "Free text" input field.
- Step 5:** A step with no content, labeled "This step has no content". It has a condition "Defined" selected.
- Step 6:** A step where the user is asked "Below is your certificate's expiration date:", with a "Step 5" input field.
- Step 7:** A confirmation step asking "Would you like to renew your certificate?", with a "Confirmation" button.

Assistant says:

Would you like to renew your certificate?

View response **Edit validation**

And then:

↓ Continue to next step

7. Enter the following text in the **Assistant says** field.

Assistant says:

What date would you like to set the renewed certificate's expiration date to? Please enter in the form of YYYY-MM-DD.

z/OS certificate expires soon

Step 7

Is taken with conditions

Conditions: All of this is true:

- 6. Would you like to r... is Yes

and Add condition +

Assistant says

What date would you like to set the renewed certificate's expiration date to? Please enter in the form of YYYY-MM-DD.

Define customer response

 - Re-ask previous step(s)
 - Go to a subaction (highlighted with a green box)
 - Use an extension
 - Search for the answer
 - Connect to agent
 - End the action

13. Click the **Go to** option list and select the **Cert Renewal skill flow**.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, a main workflow is displayed with steps 2 through 8. Step 8 is currently selected. A modal dialog titled "Go to a subaction" is open over the workflow. The dialog has a "Settings" tab where "Cert Renewal skill flow" is selected under "Go to". It also includes sections for "Fallback" and "Retrieve certificate expiration". Below the settings, there's a "And then" section with a "Go to a subaction" entry. This entry has a "Goes to action" field labeled "Missing action. Edit settings." and a "Pass values" field. At the bottom of the dialog are "Cancel" and "Apply" buttons, with "Apply" being highlighted.

14. Click Apply.

The screenshot shows the same interface after the "Apply" button was clicked. The "And then" section now shows a "Goes to action" entry with a green checkmark next to it, indicating that the action has been successfully configured. The rest of the workflow and dialog are identical to the previous screenshot.

15. Click Edit passed values.

To pass the input values to the Cert Renewal skill flow subaction using the user's provided expiration date and the certificate label specified earlier, edit the passed values to the subaction.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there is a vertical list of steps numbered 1 through 8. Steps 1, 2, 3, 5, 6, 7, and 8 are visible, while step 4 is collapsed. Step 1 is a confirmation step. Step 2 asks "What is your certificate label?", Step 3 asks "Would you like to renew your certificate?", Step 5 asks for the expiration date, Step 6 is a confirmation step, Step 7 asks for the renewal date, and Step 8 is another confirmation step. Step 8 has a condition set: "If 7. What date would y... is defined". Below the steps, the "Assistant says" section contains a message about certificate renewal. At the bottom, under "And then", there is a "Go to a subaction" step. This step is highlighted with a green dashed border. It has a dropdown menu open, showing "Goes to action Cert Renewal skill flow". The "Edit passed values" button is also highlighted with a green box.

16. Click **Set new value +** and then select **extra_vars.cert_label_survey**.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, a flowchart titled "z/OS certificate expires soon" is displayed with steps numbered 1 through 7. Step 8 is currently selected. On the right, the "Editor" tab is active, showing the configuration for Step 8. The condition "Is taken with conditions" is set to "1 condition". A modal window titled "Edit passed values" is open, displaying a list of variables that will be passed to the "Cert Renewal skill flow" skill. The variable "1. extra_vars.cert_label_survey" is highlighted with a green box.

17. In the To field, select Action step variables.

This screenshot shows the same interface as the previous one, but the "Action step variables" option in the "To" field dropdown has been selected. The dropdown menu is open, showing "Set", "Enter text", "Expression", "Action step variables", "Retrieve certificate expiration (step 4)", and "Assistant variables". The "Action step variables" option is highlighted with a green box.

18. Click What is your certificate label?

The screenshot shows the IBM Watsonx Orchestrator interface with a skill flow editor. A modal window titled "Edit variable values" is open, showing two "Set" actions being configured:

- Set 8₁. extra_vars.cert_label_survey To 3. What is your certificate label?
- Set 8₄. extra_vars.new_expiry_date_su... To 7. What date would you like to set the ...

19. Repeat steps 16 - 18 adding the **extra_vars.new_expiry-date_survey** input variable and **What date would you like to set the...** in the **To** field.

The screenshot shows the IBM Watsonx Orchestrator interface with a skill flow editor. A modal window titled "Edit variable values" is open, showing two "Set" actions being configured:

- Set 8₁. extra_vars.cert_label_survey To 3. What is your certificate label?
- Set 8₄. extra_vars.new_expiry_date_su... To 7. What date would you like to set the ...

20. Click **Set new value +** and then select **extra_vars.sign_label_survey**.

The screenshot shows the 'Edit passed values' dialog for Step 8. The dialog lists variables 1 through 7. Variable 6, 'extra_vars.sign_label_survey', is selected and highlighted with a green box. The 'To' dropdown next to it is also highlighted with a green box.

21. In the To option list, select Enter text.

The screenshot shows the 'Edit variable values' dialog for Step 8. The 'To' dropdown for variable 6 is open, showing options: Enter text, Expression, and Action step variables. The 'Enter text' option is highlighted with a green box.

22. Enter TESTCA in the Enter text field and click Apply for the To option list.

Enter text:

TESTCA

For this passed value, hard-code `TESTCA` in the skill flow's input for the `sign_label` variable. This is the CA certificate created earlier for demo purposes in the AAP web console.

The screenshot shows the IBM Watsonx Orchestrate interface with a skill flow editor. A modal window titled "Edit passed values" is open, showing the mapping of variables from survey steps to skill flow variables. The modal contains the following mappings:

- Set `extra_vars.cert_label_survey` To `3. What is your certificate label?`
- Set `extra_vars.new_expiry_date_survey` To `7. What date would you like to set the ...`
- Set `extra_vars.sign_label_survey` To `TESTCA`

The "Apply" button in the bottom right corner of the modal is highlighted with a green box.

23. Review the **Edit passed values** and then click **Apply**.

Review all 3 variables are set correctly.

z/OS certificate expires soon

New step +

25. Click the **Is taken** option list and select **with conditions**.

To complete the flow, ask the user if they want to verify the new expiration date.

The screenshot shows the IBM Watsonx Orchestrate interface with the following details:

- Workflow Overview:** A vertical list of steps on the left:
 - Step 3: "z/OS certificate expires soon" - "What is your certificate issuer?" (Free text)
 - Step 4: "3 is Defined" - "This step has no content"
 - Step 5: "1 Step 4" (button)
 - Step 6: "3 is Defined" - "Would you like to renew your certificate?" (Confirmation)
 - Step 7: "6 is Yes" - "What date would you like to set the renewed certificate's expiration date to? Please enter in the..." (Free text)
 - Step 8: "7 is Defined" - "Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an..." (button)
 - Step 9: "9" (button) - "This step has no content"
- Current Step (Step 9):**
 - Condition:** "Is taken" dropdown menu open, showing options: "without conditions" (selected), "without conditions", and "with conditions".
 - Content:** "Assistant says" field contains: "For example: Please select from the following options:" followed by a rich text editor toolbar and a "Define customer response" button.
 - Action:** "And then" dropdown menu open, showing "Continue to next step".

26. Enter the text that follows in the **Assistant says** field.

Assistant says:

Would you like to verify the new expiration date for your certificate?

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main area displays a workflow titled 'z/OS certificate expires soon'. The workflow consists of several steps:

- Step 1:** 'Continue to next step' (greyed out)
- Step 2:** '3 is Defined' (greyed out)
- Step 3:** 'This step has no content'
- Step 4:** 'Go to subaction: Retrieve certifica...' (greyed out)
- Step 5:** '3 is Defined' (greyed out)
- Step 6:** 'Below is your certificate's expiration date:
1. Step 4' (greyed out)
- Step 7:** 'Continue to next step' (greyed out)
- Step 8:** 'Would you like to renew your certificate?' (greyed out)
- Step 9:** 'Confirmation' (greyed out)
- Step 10:** 'What date would you like to set the renewed certificate's expiration date to? Please enter in the...
Tr Free text' (greyed out)
- Step 11:** 'Continue to next step' (greyed out)
- Step 12:** '7 is Defined' (greyed out)
- Step 13:** 'Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an...
Go to subaction: Cert Renewal ski...' (greyed out)
- Step 14:** '7 is Defined' (highlighted with a green dashed border)
- Step 15:** 'Would you like to verify the new expiration date for your certificate?' (highlighted with a green dashed border)
- Step 16:** 'Continue to next step' (greyed out)

Step 9 Configuration:

- Condition:** Is taken with conditions
- Set variable values:** Set variable values (button)
- Conditions:** 1 condition
 - If All of this is true:
 - 7. What date would y... is defined
 - and Add condition +
- New condition group +**

Assistant says:

Would you like to verify the new expiration date for your certificate?

Define customer response:

And then

Continue to next step

27. Click the **Define customer response** option list and select **Confirmation**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. On the left, a vertical stack of cards represents a workflow:

- z/OS certificate expires soon**: Step 1, "Continue to next step".
- 3 is Defined**: Step 2, "This step has no content".
- 4**: Step 3, "Go to subaction: Retrieve certifica...".
- 5**: Step 4, "1 Step 4", "Continue to next step".
- 6**: Step 5, "Would you like to renew your certificate?", "Confirmation", "Continue to next step".
- 7**: Step 6, "6 is Yes", "What date would you like to set the renewed certificate's expiration date to? Please enter in the...", "Tr Free text", "Continue to next step".
- 8**: Step 7, "7 is Defined", "Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an...", "Go to subaction: Cert Renewal ski...".
- 9**: Step 8, "7 is Defined", "Would you like to verify the new expiration date for your certificate?", "Continue to next step", "New step +".

On the right, the "Editor" tab is active, showing the configuration for Step 9:

- Step 9**: "Is taken with conditions". A green dashed box highlights the condition configuration.
- Conditions**: "If All of this is true:"
 - 7. What date would y... is defined
 - and Add condition +
- Set variable values**: "1 condition".
- Assistant says**: "Would you like to verify the new expiration date for your certificate?"
- Define customer response** (highlighted with a green box):
 - System**: Confirmation
 - Options**: Enable customers to select from Yes or No response.
 - Confirmation**: As buttons (Yes, No)
 - Tr Free text**
 - Regex**
 - Number**
 - Date**
 - Time**
 - Saved**
- Preview** button.

28. Click **Next step +**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. On the left, a vertical stack of cards represents a workflow:

- Step 3:** "is Defined". Subaction: "Go to subaction: Retrieve certifica..."
- Step 4:** "This step has no content". Subaction: "Go to subaction: Retrieve certifica..."
- Step 5:** "is Defined". Below: "Below is your certificate's expiration date: 14 Step 4". Subaction: "Continue to next step".
- Step 6:** "is Defined". Below: "Would you like to renew your certificate? Confirmation". Subaction: "Continue to next step".
- Step 7:** "is Yes". Below: "What date would you like to set the renewed certificate's expiration date to? Please enter in the...". Subaction: "Free text". Subaction: "Continue to next step".
- Step 8:** "is Defined". Below: "Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an...". Subaction: "Go to subaction: Cert Renewal ski...".
- Step 9:** "is Defined". Below: "Would you like to verify the new expiration date for your certificate? Confirmation". Subaction: "Continue to next step".

Editor Tab: Shows Step 9 selected. The condition "Is taken with conditions" is chosen. A condition is defined: "If All of this is true: 7. What date would y... is defined".

Visualization Tab: Preview button is visible.

29. Click the **Is taken** option list and select **with conditions**.

On the condition that the user selected **Yes** in the previous step, configure a step to run the **Retrieve certificate expiration** skill-flow again to retrieve and display the new expiration date of the renewed certificate.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main area is titled 'z/OS certificate expires soon'. The 'Editor' tab is selected. Step 10 is currently being configured.

Step 10: A dropdown menu labeled 'Is taken' is open, showing three options: 'without conditions' (selected), 'without conditions', and 'with conditions'. A green box highlights the 'without conditions' option. To the right, a 'Set variable values' button is visible.

Assistant says: A text input field with placeholder text 'For example: What type of transfer would you like to make?'. Below it is a 'Define customer response' section with a dropdown menu.

And then: A dropdown menu labeled 'Continue to next step' is shown.

Step 10 Content: A box labeled 'This step has no content' is highlighted with a green dashed border. Below it is a 'Continue to next step' button.

30. Click the **And then** option list and select **Go to a subaction**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. A conversation flow is displayed on the left, and the 'Editor' tab is active on the right.

Conversation Flow:

- z/OS certificate expires soon
- Is taken with conditions
- Below is your certificate's expiration date: Step 4
- Continue to next step
- Would you like to renew your certificate? Confirmation
- Continue to next step
- What date would you like to set the renewed certificate's expiration date to? Please enter in the... Try Free text
- Continue to next step
- Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an... Go to subaction: Cert Renewal skill
- Would you like to verify the new expiration date for your certificate? Confirmation
- Continue to next step
- This step has no content Continue to next step
- Continue to next step

Step 10 Editor:

- Condition:** Is taken with conditions
- Conditions:**
 - If All of this is true:
 - 9. Would you like to v... is Yes
 - and Add condition +
- New condition group +**
- Assistant says:** For example: What type of transfer would you like to make?
- Define customer response:** And then
 - Continue to next step
 - Go to a subaction
 - Re-ask previous step(s)
 - Use an extension
 - Search for the answer
 - Connect to agent
 - End the action

31. Click the (a) Go to option list, select (b) Retrieve certificate expiration, and then click (c) Apply.

The screenshot shows the 'Go to a subaction' dialog box open over the main editor area. The 'Retrieve certificate expiration' option is selected in the list.

Settings:

Go to a subaction:

- Go to
 - Select an action...
 - Cert Renewal skill flow
 - Fallback
 - Retrieve certificate expiration

Buttons:

- Cancel
- Apply

32. Click **Edit passed values**.

33. Click Set new value + and then select extra_vars.cert_label_survey.

34. In the To option list, click Action step variables.

The screenshot shows the IBM Watsonx Orchestrate interface with a workflow titled "z/OS certificate expires soon". Step 10 is currently selected. The "Edit variable values" dialog is open, showing the "Edit variable values" tab. The "To" dropdown menu is open, displaying several options: "Enter text", "Expression", and "Action step variables". The "Action step variables" option is highlighted with a green border. A yellow warning message at the top of the dialog states: "Variables are not private if they are shared with Skill Studio."

35. Click What is your certificate label?.

The screenshot shows the same workflow and dialog as the previous one, but the variable being set is now "3. What is your certificate label?". This variable is highlighted with a green border in the "To" dropdown menu. The rest of the dialog and interface are identical to the previous screenshot.

36. Review the Edit variable values and click Apply.

Step 10

Is taken with conditions

Conditions

Passed values

Edit passed values

Configuring how your skill-based action leverages and stores information in assistant variables. [Learn more](#)

Variables are not private if they are shared with Skill Studio.

The values you select from this action will be passed to "Retrieve certificate expiration" skill.

Set 10: 3.1.extra_vars.cert_label_survey To 3. What is your certificate label?

Set new value +

Cancel Apply

Goes to action Retrieve certificate expiration

37. Click Next step +.

Step 10

Is taken with conditions

Conditions

If All of this is true:

9. Would you like to v... is Yes

and Add condition +

New condition group +

Assistant says

For example: What type of transfer would you like to make?

Define customer response

And then

Go to a subaction

Goes to action Retrieve certificate expiration

Pass values 1. extra_vars.cert_label_survey

Upon return Continue

Edit settings Edit passed values

New step + Preview ▶

38. Click the **Is taken** option list and select **with conditions**.

The final step is to display new expiration date of the certificate. Nothing is returned in the previous step when executing the Retrieve certificate expiration skill flow - this was because output form was hidden when the skill was created. In this step, provide the output as an assistant response to the user, with only the expiration date extracted from the full job output.

The screenshot shows the IBM Watsonx Orchestrator AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main area displays a workflow titled 'z/OS certificate expires soon'. Step 11 is currently selected, indicated by a blue border. The configuration for Step 11 is as follows:

- Is taken:** A dropdown menu is open, showing three options: 'without conditions' (selected), 'without conditions', and 'with conditions'. The 'with conditions' option is highlighted with a green box.
- Assistant says:** A rich text editor field containing the placeholder text 'For example: What type of transfer would you like to make?'. Below it is a 'Define customer response' dropdown.
- And then:** A dropdown menu showing the option 'Continue to next step'.

The left sidebar lists other steps in the workflow, numbered 3 through 11. Step 11 is highlighted with a green box. Step 11's configuration panel also has a green box around its content area.

39. Enter the following text in the **Assistant says** field.

Assistant says:

Below is the new expiration date of your renewed certificate:

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. On the left, a vertical stack of cards represents a workflow:

- z/OS certificate expires soon**: Step 1, "Is taken with conditions".
- Would you like to renew your certificate?**: Step 2, "Confirmation".
- What date would you like to set the renewed certificate's expiration date to? Please enter in the...**: Step 3, "Free text".
- Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an...**: Step 4, "Free text".
- Would you like to verify the new expiration date for your certificate?**: Step 5, "Confirmation".
- This step has no content**: Step 6, "Free text".
- Below is the new expiration date of your renewed certificate:**: Step 7, "Free text".

Step 11 (highlighted with a green dashed box):

- Is taken with conditions**
- Conditions**: If All of this is true:
 - 9. Would you like to v... is Yes
- New condition group +**

Assistant says:

Below is the new expiration date of your renewed certificate:

Define customer response

And then

Continue to next step

40. While still in the **Assistant says** field, press **return** and then type **\$**.

The **\$** is a special key that lists available functions. The image below is edited to show you must type the **\$**, but it will not be displayed on your screen.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main area displays a workflow titled 'z/OS certificate expires soon'. The steps are numbered 3 through 11. Step 3: 'Would you like to renew your certificate?' (Defined). Step 6: 'What date would you like to set the renewed certificate's expiration date to? Please enter in the...' (Confirmation). Step 7: 'Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an...' (Free text). Step 8: 'Would you like to verify the new expiration date for your certificate?' (Confirmation). Step 9: 'Below is the new expiration date of your renewed certificate:' (Content box containing '\$'). Step 10: 'This step has no content' (Free text). Step 11: 'Below is the new expiration date of your renewed certificate:
' (Content box containing '\$'). On the right side, the 'Step 11' configuration panel shows the condition 'Is taken with conditions' set to 'with conditions'. A condition is defined: 'If All of this is true: 9. Would you like to v... is Yes' and 'and Add condition +'. Below this, there are sections for 'New condition group +' and 'Assistant says'. The 'Assistant says' section contains the variable '\$'.

41. Click **Retrieve certificate expiration (step 10)**.

Be sure to select the output from step 10 and not step 4.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The top navigation bar includes 'IBM Watsonx Orchestrate', 'AI assistant builder', 'Zeeves', and a user icon. The main area is titled 'z/OS certificate expires soon'.

Step 11: This step is configured with the condition 'Is taken with conditions'. A single condition is defined: 'If All of this is true: 9. Would you like to v... is Yes'. There is also an option to 'Add condition +' and a link to 'New condition group +'.

Assistant says: Below the step configuration, the AI assistant's response is displayed. It starts with 'Below is the new expiration date of your renewed certificate:' followed by a list of variables and their values. The variable 'Retrieve certificate expiration (step 10)' is highlighted with a green border.

Variables:

- Action step variables >
- Retrieve certificate expiration (step 4) >
- Cert Renewal skill flow (step 8) > (with a dropdown arrow)
- Retrieve certificate expiration (step 10) >** (highlighted with a green border)
- Assistant variables >
- Integration variables >

Content: The AI response includes the following text and code snippets:

```

Below is the new expiration date of your renewed
certificate: <br />

```

Buttons: At the bottom of the AI response area are three buttons: a blue 'Continue to next step' button, a white 'Edit' button with a pencil icon, and a white 'Delete' button with a trash bin icon.

42. Click **Retrieve certificate expiration result variable**.

The screenshot shows the IBM Watsonx Assistant Editor interface. At the top, it displays "IBM Watsonx Orchestrate" and "AI assistant builder". The main area shows a sequence of steps for renewing a z/OS certificate:

- Step 11:** "Is taken with conditions" (highlighted with a green border). The condition is set to "All" and includes step 9 ("Would you like to renew your certificate?") with value "Yes". There is also an option to "Add condition".
- Assistant says:** "Below is the new expiration date of your renewed certificate:" followed by a code editor window containing:

```
< All variables
1. Retrieve certificate expiration result var...
Define customer response
```
- And then:** "Continue to next step" (highlighted with a green border).
- Step 11 (continued):** Shows the final step where the user is informed of the new expiration date.

43. Click the **And then** option list and select **End the action**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. On the left, a vertical stack of cards represents a workflow:

- Step 1:** z/OS certificate expires soon → Continue to next step
- Step 2:** 3 is Defined → Would you like to renew your certificate? (Confirmation)
- Step 3:** 6 is Yes → What date would you like to set the renewed certificate's expiration date to? Please enter in the... (Free text)
- Step 4:** 7 is Defined → Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an... (Confirmation)
- Step 5:** 8 is Yes → Would you like to verify the new expiration date for your certificate? (Confirmation)
- Step 6:** 9 is Yes → This step has no content (Confirmation)
- Step 7:** 10 is Yes → Below is the new expiration date of your renewed certificate: 11. Retrieve certificate expiration n... (Confirmation)
- Step 8:** 11 is Yes → Below is the new expiration date of your renewed certificate: 11. Step 10 (Confirmation)

Step 11 (Editor View):

- Condition:** Is taken with conditions
- Conditions:** 1 condition
 - If All of this is true:
 - 9. Would you like to v... is Yes
 - and Add condition +
- Assistant says:**
 - Below is the new expiration date of your renewed certificate: 11.10. Retrieve certificate expiration n...
- And then:**
 - Continue to next step (highlighted with a green box)
 - End the action

44. Review the (a) final step, click (b) Save (), and then click (c) x.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. The left side is the 'Editor' view, displaying a sequence of steps (3-11) and their conditions. Step 3: 'z/OS certificate expires soon' leads to 'Would you like to renew your certificate?'. Step 6: '6 is Yes' leads to 'What date would you like to set the renewed certificate's expiration date to? Please enter in the...'. Step 7: '7 is Defined' leads to 'Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an...'. Step 9: '9 is Yes' leads to 'Would you like to verify the new expiration date for your certificate?'. Step 10: '10 This step has no content' leads to 'Go to subaction: Retrieve certificate expiration date'. Step 11: '11 9 is Yes' leads to 'Below is the new expiration date of your renewed certificate: 11 Step 10'. The right side is the 'Visualization' view, showing the flowchart with nodes for each step and decision points. Annotations 'a', 'b', and 'c' are overlaid on the interface: 'a' points to the 'Continue to next step' button in Step 3; 'b' points to the 'Set variable values' button in Step 11; 'c' points to the 'X' button in the top right corner.

Run the complete custom-built action

The custom-built action is now complete and can be demonstrated to the Security Administrator for this use case. In demonstrating the ability to infuse Ansible automations into a natural conversation, the Security Administrator is able to see the value that watsonx Assistant for Z can provide in helping them improve productivity and remove the need to go to their senior colleagues for assistance.

1. Open **Preview** in the **Ai assistant builder**.

The screenshot shows the IBM Watsonx Orchestrate interface. On the left, there's a sidebar with options like Home, Build, Generative AI, Actions (which is selected and highlighted with a green border), Evaluate, Preview, Deploy, Publish, Environments, Improve, and Analyze. The main area is titled 'Created by you /' and contains a table of actions. The columns are Name, Last edited, Examples count, Steps count, and Status. The table includes rows for 'z/OS IPL Information', 'Zeeves-gather-facts-flow', 'Retrieve IPL information', 'Retrieve certificate expiration', 'Cert Renewal skill flow', and 'z/OS certificate expires soon'. All actions appear to be in a good state.

2. Enter the following text in the assistant.

Prompt:

How do I check the expiration date for my certificate that's expiring soon?

Use the Change layout option to open a full page view of the assistant.

This screenshot shows the 'Preview assistant' view of the AI assistant builder. The top navigation bar includes 'AI assistant builder', 'Zeeves', and various action buttons like 'Copy link to share', 'Change layout', 'Change background', and 'Customize web chat'. The main area features a large blue owl icon with the text 'AssistantZeeves' above it. Below the icon, a message says 'Hi! I'm Zeeves. How can I help you today?'. At the bottom, there's a text input field containing the prompt 'How do I check the expiration date for my certificate that's expiring soon?' followed by a green rectangular highlight.

3. Review the response and click **Yes**.

The assistant responds with conversational search, providing a content-grounded answer based on IBM Z documentation. The response includes a RACF command that the Security Administrator could use to determine their certificate's expiration date.

Following the response, the assistant prompts the user if they want to run the skill to retrieve a certificate's expiration date.

IBM Watson Assistant interface screenshot showing a conversation with the AI assistant named "AssistantZeeves".

User message: How do I check the expiration date for my certificate that's expiring soon?

AI response:

- To retrieve the expiration date of your z/OS certificate, you would typically check the certificate itself or consult the system logs. However, based on the provided documents, there isn't a direct command or utility mentioned for this purpose. You may need to contact your system administrator or refer to your specific system's documentation for precise instructions. Generally, you can use commands like 'ODTE' or 'RACDCERT' to list and inspect certificates.

AI note: Accuracy of generated answers may vary.

AI question: Would you like to run the skill to retrieve your certificate's expiration date?

Buttons: Yes, No

Type something... button

Built with IBM Watson Assistant

4. Enter DEMOCERT after the assistant responds with **What is your certificate label?**

Prompt:

DEMOCERT

The screenshot shows the IBM Watsonx Orchestrate interface with the 'AI assistant builder' tab selected. A sidebar on the left contains various icons for managing assistants. The main area is titled 'Preview assistant' and shows a conversation with 'AssistantZeeves'. The user asks, 'How do I check the expiration date for my certificate that's expiring soon?'. AssistantZeeves responds at 12:37 PM with: 'To retrieve the expiration date of your z/OS certificate, you would typically check the certificate itself or consult the system logs. However, based on the provided documents, there isn't a direct command or utility mentioned for this purpose. You may need to contact your system administrator or refer to your specific system's documentation for precise instructions. Generally, you can use commands like 'ODTE' or 'RACDCERT' to list and inspect certificates.' Below this, a note says, 'Accuracy of generated answers may vary.' The user then asks, 'Would you like to run the skill to retrieve your certificate's expiration date?' with options 'Yes' and 'No'. AssistantZeeves replies at 12:40 PM with 'Yes'. The user then asks, 'What is your certificate label?' with a green dashed box around the question. At the bottom, a red box highlights the text 'DEMOCERT'.

5. Wait 10 seconds and then click **Apply**.

The screenshot shows the IBM Watsonx Orchestrate interface. In the top navigation bar, it says "IBM Watsonx Orchestrate" and "AI assistant builder". The workspace is titled "Preview assistant" and contains a conversation with "AssistantZeeves". The user asks, "How do I check the expiration date for my certificate that's expiring soon?". AssistantZeeves responds with a message: "To retrieve the expiration date of your z/OS certificate, you would typically check the certificate itself or consult the system logs. However, based on the provided documents, there isn't a direct command or utility mentioned for this purpose. You may need to contact your system administrator or refer to your specific system's documentation for precise instructions. Generally, you can use commands like 'ODTE' or 'RACDCERT' to list and inspect certificates." Below this, a note says "[AI] Accuracy of generated answers may vary." The user then asks, "Would you like to run the skill to retrieve your certificate's expiration date?", with "Yes" and "No" buttons. The user clicks "Yes". AssistantZeeves replies with "What is your certificate label?", and the user types "DEMOCERT". Finally, AssistantZeeves shows a screenshot of the "Retrieve certificate expiration" automation configuration, which has "id *" set to "21" and the "Apply" button highlighted.

6. Review the response and then click Yes.

By providing the automation within the assistant conversation, it makes it very quick for the Security Administrator to identify the certificate's expiration date. In addition to providing this valuable information, the assistant is configured with another automation to renew the certificate if they choose to do so.

The expiration date you see may differ from the image that follows.

The screenshot shows the IBM Watsonx Assistant interface. At the top, there are tabs for "IBM Watsonx Orchestrate", "AI assistant builder", and "Zeeves". On the right, there are buttons for "Copy link to share", "Change layout", "Change background", and "Customize web chat". The main area is titled "Preview assistant" and shows a conversation with "AssistantZeeves". The conversation starts with the AI asking if the user wants to run a skill to retrieve their certificate's expiration date. The user replies "Yes". The AI then asks for the certificate label, and the user replies "DEMOCERT". A modal window titled "Retrieve certificate expiration" shows the ID "26" and buttons for "- | +". Below the modal, the AI displays the certificate's expiration date as "2025/01/30 23:59:59". The user is then asked if they want to renew their certificate, with "Yes" highlighted by a green dashed box. At the bottom, there is a text input field with "Type something..." and a send button.

7. Enter a date in the future in the format **YYYY-MM-DD**.

The screenshot shows a conversation in the 'Preview assistant' tab of the IBM Watsonx Assistant builder. The AI assistant, 'AssistantZeeves', asks for the certificate label ('What is your certificate label?') and receives 'DEMOCERT'. It then retrieves the certificate expiration date ('Retrieve certificate expiration') and displays it as '2030/01/30 23:59:59'. The user is asked if they would like to renew the certificate ('Would you like to renew your certificate?') and clicks 'Yes'.

8. Review the response, wait 30 seconds to a minute, and then click **Yes**.

It is crucial that you wait 30 seconds to a minute before selecting Yes.

This is because in the background, your z/OS Certs – Search and Renew automation is running within AAP (which you can verify within the [AAP Web console](#)). This is mapping the user-inputted expiration date as well as the original certificate label provided by the end-user to the inputs of this AAP automation."

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. At the top, there are tabs for "IBM Watsonx Orchestrate", "AI assistant builder", and "Zeeves". On the right, there are buttons for "Copy link to share", "Change layout", "Change background", and "Customize web chat". The main area is titled "Preview assistant" and shows a conversation with "AssistantZeeves".

The conversation history is as follows:

- AssistantZeeves asks for the certificate's expiration date: "Below is your certificate's expiration date: {"certificate expiration date": "2025/01/30 23:59:59"}"
- The user responds with "Would you like to renew your certificate?" and two buttons: "Yes" and "No".
- AssistantZeeves replies with "You 1:05 PM" and "Yes".
- AssistantZeeves asks for the new expiration date: "What date would you like to set the renewed certificate's expiration date to? Please enter in the form of YYYY-MM-DD."
- The user responds with "You 1:05 PM" and "2025-06-30".
- AssistantZeeves provides a status update: "Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an option below."
- AssistantZeeves asks for verification: "Would you like to verify the new expiration date for your certificate?" with two buttons: "Yes" and "No".
- A text input field at the bottom says "Type something..." with a send arrow icon.

At the bottom left, it says "Built with IBM watsonx" with a help icon. On the far left, there is a vertical sidebar with various icons.

9. Wait 10 seconds and then click **Apply**.

The screenshot shows the IBM Watsonx Orchestrate AI assistant builder interface. On the left, there's a sidebar with various icons. The main area is titled "Preview assistant" and shows a conversation with "AssistantZeeves".

Message 1 (User): 1:05 PM
What date would you like to set the renewed certificate's expiration date to? Please enter in the form of YYYY-MM-DD.

Message 2 (You): You 1:05 PM
2025-06-30

Message 3 (Assistant): 1:05 PM
Renewing your certificate...this could take up to a minute. Please wait one minute before selecting an option below.

Message 4 (User): Would you like to verify the new expiration date for your certificate?
Yes No

Message 5 (You): You 1:07 PM
Yes

Message 6 (Assistant): 1:07 PM
Retrieve certificate expiration
id *
29 Cancel Apply

A green dashed box highlights the "Apply" button in the modal dialog.

10. Review the response.

The response should match the date entered in step 7.

The screenshot shows a conversation in the IBM Watsonx Assistant interface. The assistant, named AssistantZeeves, asks for the renewed certificate's expiration date. The user responds with "2025-06-30". The assistant then informs the user that renewing the certificate might take up to a minute and asks if they would like to verify the new expiration date. The user selects "Yes". The assistant retrieves the certificate information, showing an ID of 29. Finally, the assistant provides the new expiration date, which is highlighted with a green dashed box: "Below is the new expiration date of your renewed certificate: {"certificate_expiration_date": "2025/06/30 23:59:59"}".

In the demo, the Security Administrator received immediate guidance on identifying the certificate expiration date via RACF commands and they were able to run automation proposed by the assistant to retrieve the certificate information. Additionally, because the assistant is configured with step-by-step conversation flows, it is possible to add additional prompts within the conversation. For example, proposing the automation of renewing the certificate on their behalf. By doing so, the Security Administrator is able to reduce the time it takes to complete this routine task.

Recall how many steps were involved in the Ansible template for **z/OS Certs – Search and Renew**. By automating these tasks with Ansible, the System Administrator streamlines the entire process and ensures their critical certificates are up-to-date and reduce the risk of expired certificates disrupting their business services.

COMING SOON!

Adding other integrations

IBM watsonx Assistant for Z can integrate with other delivery channels beyond a web page. Other channels include Slack, Microsoft teams, WhatsApp, and many others. Integrating with these and other channels are not covered in the lab guide. However, follow the steps to find the current channels that are supported and where to get more information.

1. Hover over the Home () and click **Integrations**.

The screenshot shows the IBM watsonx Orchestrate interface. The left sidebar has a tree view with 'Home' selected under 'Build'. The main area displays a series of cards: 'Build actions', 'Customize your greeting', 'Create a fallback plan', 'Preview & debug', 'Customize web chat', 'Set up a channel', 'Set up live agent', and 'Check'. Below this is a diagram titled 'Assistant architecture' showing nodes like 'Default behavior', 'Zeeves', 'Actions', 'Fallback', 'Search', and various action types. The bottom navigation bar shows '1/2 >'.

Integrations

- Activity log
- Assistant settings

2. Explore the **Essential channels** and **Channels** sections.

The screenshot shows the 'Integrations' section. A green dashed box highlights the 'Essential channels' section, which contains a 'Web chat' card with a 'Contact center integrations' section for NICE, Genesys, and Twilio. Another green dashed box highlights the 'Channels' section, which lists third-party integration options: SMS, Facebook messenger, Genesys Bot Connector, Slack, Microsoft teams, and WhatsApp with Twilio. Each option has an 'Add' button.

3. Click **Add** on the **Slack** tile.

Integrations
